PREFACE

When in 1934 the original edition of this book, "Die Lehre der Jainas, nach den alten Quellen dargestellt" (Grundriss der indo-arischen Philologie und Altertumskunde Vol. III No. 7), had been published, there were voices from India regretting that the book had not been written in English and demanding for a translation. Of the various projects regarding such a version none has been effected until the matter was taken up by the reputed publishers whose names appear on the title-page of this English book. The present writer is highly indebted to the able translator, Herr Wolfgang Beurlen, with whom to collaborate was a pleasure at all stages of the difficult task.

In harmony with the character of the "Grundriss" certain limits had to be respected. Often outlines and references had to suffice, though, especially in the first chapters, the description thus came near to a sketch. The author consciously neglected the treatment of other religious and philosophical systems and historical facts of Old as well as of Mediaeval and New India in order not only to avoid an excessive extent of the book, but also, eventually, to give the old sources, i. e. the Śvetāmbara Canon, their due, but not neglecting Digambara writers. It need not be said that it was impossible to render all details themselves or even to register all references to the same. Hence the reader must be warned against taking this book for a bibliography or an encyclopedia. The names of the Jain authors and Jain works can but serve to indicate the untiring zeal of scholars and the grand liberality of donators in favour of their noble religion. That the bibliographical survey of the first edition has been altogether dropped seems to be excusable, since the conditions of the present epoch did not allow of bringing forward a survey of all that in the mean-time had been printed and published on the field of Jainism in India.

On the other hand our Jain friends might come to obtain an idea of what much has been accomplished by Western scholars—including many Germans—during a period of about one hundred and fifty years, burning the midnight-oil with a view to make the world acquainted with one of the finest products of the Indian mind.

It may be hoped that the results will be, in general, applauded by Jain circles and that errors and shortcomings, inevitable as they are in such vast a field, will be kindly excused.

मे अल्पज्ञ बहुत दोषी हूँ । यह ग्रन्थ है महान् ॥
मिथ्यालाप दुष्कृत्य करूँ । सुधार जो विद्वान् ॥

(अमोलल ऋषि)

THE DOCTRINE OF THE JAINAS

A SHORT HISTORY OF JAIN RESEARCH

§ 1. It was in the year 1807 that in the Asiatic Researches (Calcutta and London), Vol. IX, there appeared three reports published under the title "Account of the Jains" and collected by Major (later Lieutenant Colonel) Colin MACKENZIE supplemented by an abstract from his diary of 1797 and from that of Dr F. BUCHANAN¹, the latter containing some notes of a Jain gentleman. These publications were immediately followed by H Th. COLEBROOKE'S "Observations on the Sect of Jains"². They were based upon those researches as well as on Colebrooke's own, and it was in them that, apart from bare descriptive recording, some scholarly spirit first made itself felt by a critical standpoint taken and by facts being combined. Jain research thus dates from somewhat more than 150 years ago.

In H. H. WILSON's "Sketch of the Religious Sects of the Hindus" we find some stray notes about the Jains, but no details are given, though, on the other hand, the author dwells upon Vol. I of the Transactions of the Royal Asiatic Society (1827) which contained an essay by DELAMAINE and one more by BUCHANAN (=F. Buchanan HAMILTON), both with the title "On the Srawacs or Jains" and followed by a few remarks of the latter and of W. FRANCKLIN about some Jain temples, by COLEBROOKE'S account of two inscriptions, and by WILSON's own review of COLEBROOKE's study "Sect

1. BUCHANAN published "A Journey from Madras through the countries of Mysore, Canara and Malabar" (Lo 1807, 2nd ed Madras 1870, comp. GUÉRINOT JAs 1909, p 55). In this work the Jains are often mentioned. BUCHANAN's Journal kept during the Survey of the Districts of Patna and Gaya in 1811-12", ed by V H JACKSON, Patna 1925, contains a description of his visit to the place where Mahāvira died Comp JACOBI SPAW 1930, p 561

2 Printed in Colebrooke's Miscellaneous Essays, 2nd, ed (1872) vol II, 191-224

of Jina" in his "Essays on the Philosophy of the Hindus"¹. In the same year, 1827, FRANCKLIN'S "Researches on the Tenets of the Jeynes and Boodhists" were published, the first book that had the Jains in its title. Its descriptive portions are readable even now, whereas this cannot be said of its mythological and speculative deductions

We abstain from cataloguing here which was printed after 1827, since this can be found in GUÉRINOT'S Bibliography (s b). We must confine ourselves to mention that "Sketch" of WILSON, because it represents the most important treatment of the subject at that time. He gives a report on the numerable Jain manuscripts both privately owned by him and by the Calcutta Sanskrit College. His "Descriptive Catalogue of the Mackenzie Collection"² dealt with 44 South Indian Jain manuscripts that had come to the East India Company in London. But even the earliest essays were partly based upon texts as was COLEBROOKE'S first one in that it concerned Hemacandra's *Abhidhānacintāmaṇi* and the *Kalpasūtra* of the Jain Canon. Still he made use of both in a selective manner only and was far from editing or translating them completely, and twenty years had to pass until the first Jain text was published. Again it was Hemacandra's work that was edited by BÖHTLINGK and RIEU with a German translation in 1847 (St Petersburg), whereas the *Kalpasūtra*, along with the *Navatattvaparakarana*, appeared in 1848 in STEVENSON'S English rendering³. That this was a rather imperfect performance⁴ is easily explained by

¹ We should not like to pass over in silence the earliest references to the Jains. Comp WINDISCH in his *Geschichte der indo-arischen Philologie* etc, p 29, ZACHARIAE WZKM 24, 337-344 (reprinted in his *Kleine Schriften*, p 41-47) and *Festschrift Winternitz* p 174-185, RANDLE JRAS 1933, p 147. The Greek glossator Hesychios (5th century A D) mentions 'gennai' as naked philosophers, a word in which M SCHMIDT in his 2nd ed (1867) of Hes p 342 surmises the Jains, comp GRAY and SCHUYLER, *Am J of Philol* 22 (1901), p 197 LASSEN, *Ind Altertumskunde* 4 (1861) and LÜDERS KZ 38, p 433 are not against SCHMIDT'S suggestion, whereas STEIN in *Megasthenes and Kautilya*, p 293 f maintains a cautious attitude

the fact that STEVENSON was the first European scholar to be confronted with the canonical Prakrit¹. The Abhidhāna-cintāmaṇi in 1858 was followed² by WEBER'S edition of Dhaneśvara's Śāstrumjayamāhātmya³ with a detailed preface. So, then, the textual basis was rather narrow for LASSEN'S sketch of Jainism⁴ in his "Indische Altertumskunde" 4, 755-787 (1861).⁵

§ 2. The mentioned edition had been WEBER'S first attempt in Jain research, but years later it was actually his great study "Über ein Fragment der Bhagavatī etc." that was epoch-making. It appeared in two parts in the Abhandlungen der Königlich Akademien der Wissenschaften zu Berlin 1865-66 and in a separate edition (1866-67), that is to say again twenty years after the first Jain text (s.a.). Obsolete as it is now, yet it marks in our field the beginning of a philological and creative epoch. As to it, the reader may be referred to WINDISCH'S precise description rendered in the Grundriss (Encyclopedia of Indo-Aryan Research). But the fundamentals laid down by WEBER in self-sacrificing zeal cannot be passed over here : his treatise "Über die heiligen Schriften der Jaina" in Indische Studien Vol. 16 and 17 (1883-85) based upon the Jain manuscripts acquired by the Royal Library of Berlin 1873-78, and his "Verzeichnis" of the same (1888-92), the latter⁶ represented by two monumental volumes, being a most accurate description which even extends to literature and history. A work of that scope going beyond the usual limits of a catalogue was not out of place at that stage. The Jain manuscripts purchased in

1 PISCHEL, Grammatik der Prakrit-Sprachen in § 17 deals with the history of research in the Ardha-Māgadhī

2 PAVIE'S French analysis of the Padmāvatīcaritra in JAs 5, T 7 may also be mentioned

3 Albrecht WEBER, Über das Śāstrumjaya Māhātmyam Ein Beitrag zur Geschichte der Jaina Leipzig 1858

The word Jainism is an English rendering and etymologically not correct. In German works of LEUMANN, WINTERNITZ, the AUTHOR and others the student will read "Jinismus" and "Jinistisch" derived from Jina, as are, in all languages, "Buddhism etc." from Buddha "Bauddhism" etc. has never and nowhere been said

5 Translation by REHATSEK JA 2, 193-200, 258-265

6 "A good deal of my visual faculty has been buried therein", Verz II, 3 p. XVIII

later years have been catalogued by the AUTHOR not earlier than in 1944¹

Some time about those eighties the first prints of canonical texts (1880 ff.) came to Europe adding to foster Jain research work over there. Their inaugurator was Rāy DHANPATI SIMHA Bāhādur at Azimganj or Murshidabad in Bengal. Those huge volumes served their purpose until they were replaced by more handy ones some thirty years after (s.b.).

The manuscripts described by WEBER had come to Berlin thanks to an agreement between BÜHLER and the Department of Public Instruction at Bombay which had commissioned him and other scholars in their service with the careful examination of private collections and the purchase of manuscripts at government costs. He was allowed to acquire manuscripts even for foreign libraries, provided they were doubles. The examined and purchased manuscripts were catalogued and listed in the valuable reports of R S and S R. BHANDARKAR, BÜHLER, KIELHORN, PETERSON, and others. The manuscripts acquired by the Government have been deposited in the Deccan College, now Bhandarkar Oriental Research Institute in Poona. The Jain works among them have been minutely described by H.R. KAPADIA in Vol XVII of the Descriptive Catalogue of the Institute (1935-48). An appendix is devoted to graphic peculiarities (comp. JUB Vol 5 and 6)²

BÜHLER, through his Reports, has not only become a patron of Jain philology indirectly, but thanks to a number of original works and essays has been a direct promotor in our field, as, in the course of years, WEBER, too, had been, and, moreover, they both have inspired younger scholars. JACOBI'S critical edition of the "Kalpasūtra of Bhadrabāhu" (AKM 7, 1 1879) clearly shows traces of BÜHLER'S spirit, while LEUMANN'S

¹ Die Jaina-Handschriften der Preussischen Staatsbibliothek Neuerwerbungen seit 1891. Leipzig 1944 (1127 mss. on 647 pages)

² WEBER already dealt with this topic (Verz. II 3, p. XII ff.). LEUMANN discussed the influence of the shape of the leaves upon the text (ZDMG 46, 583f.). Miniatures in manuscripts were treated by HÜTTEMANN, Baessler-Archiv 4, 2, BROWN, Jaina Gazette 28, p. 77-83 (reviewed by Hirananda SASTRI ibid. 113 f.), BROWN, Kālaka (§ 24) with a bibliography. The Bibliography of Indian Archaeology may also be consulted.

“Aupapātika Sūtra” (AKM 8, 2 ; 1883)—originally a thesis of Leipzig—is influenced by WEBER and the Berlin Collection. It may be mentioned here that WEBER successfully co-operated with LEUMANN in his great essay referred to above. The editions of both JACOBI and LEUMANN are masterpieces of philology, and it was only a predilection for the old Prakrit grammarians that led PISCHEL in his famous “Grammatik der Prakrit-Sprachen” (§ 19, footnote 3) to call HOERNLE’s “Uvāsagadasāo” (1890) the only “critical” one¹.

§ 3. JACOBI’s introduction to the Kalpasūtra has come to be fundamental for all further research. This research has been described up to the twenties of this century by WINDISCH and need not be repeated here². Its starting point was, due to JACOBI³, the definite removal of any doubt whether the Jains or the Buddhists were of earlier origin⁴, a doubt resulting from some inward and outward similarities between those two world-denying religions. Jain creed had sprung into existence long before Gautama Buddha’s time, Vardhamāna Mahāvīra was not its founder, but a reformer of what Pārśva had taught, whom tradition credibly maintains to have lived 250 years before him. It may be added here from a later deduction of JACOBI’s that Mahāvīra’s Nirvāna was in 477 B.C. As we know from Pali sources, he was a contemporary of Gautama and is likely to have survived him by seven years⁵.

Pali texts, moreover, give numerous details about thinkers and their schools in the Buddha’s time. F.O. SCHRADER, a pupil of Leumann, made them the subject of his thesis in 1902⁶.

1 A reflex of Pischel’s remark can be seen in Antagaḍadasāo ed BARNETT, p X, comp LEUMANN JRAS 1907, p 1080 As to the Uvās, see LEUMANN’s review WZKM 3, 328-350

2 For Jain studies in Italy mostly going back to JACOBI see the indological bibliography up to 1911 in Rivista degli Studi Orientali 5, 219-271

3 See his introduction to the Kalpasūtra and to SBE 22 and 45

4 COLEBROOKE found it necessary to investigate the precedence of the Veda and of Brahmanism before the said religions (Observations etc, Misc Essays II 196 ff) FRANCKLIN had no doubt that the original religion of India was that of the “Boodh” and the “Jeyne” (Researches p 137)

5 SPAW 1930, p 557ff (§19) Counter-arguments brought forward by KEITH Bull School Or. Studies 6, p 859-866

6 Über den Stand der indischen Philosophie zur Zeit Mahāvīras and Buddhas Strassburg 1902

The most important of those philosophers was Gośāla Maskarīputra, the head of the Ājīvika sect, whose interesting career has been repeatedly treated by HOERNLE¹. That Aśoka knew the Jains under the name of *mgantha* (Topra edict 7, 26) was BÜHLER's statement². Their early history in so far as it is reflected by Hemacandra in his *Parīśīstaparvan* (the *Sthavīrāvalī*) and in legends pertaining to it, is due to JACOBI no less than is the right interpretation of what is called the schism that led to the separation of the Śvetāmbara and Digambara communities. They did not, as old time would have it, separate by an act of violence but gradually, until, eventually, both partners became aware of their differences.

§ 4. It might have been expected that continued Jain research in Europe should have led to the origin of a Jaina Text Society as a counterpart to the well-known Pālī Text Society. PISCHEL expressed his hope in this direction³, but things took a different course. The edition of canonical texts—which, of course, was the most important—did not go on methodically, but as circumstances would have it. We are glad to say that the Jains themselves came to help, if, to be true, in their own style. The Āgamodaya-Samitī, founded at Mhesana in 1915, has published most works of the Śvetāmbara Siddhānta and many more non-canonical texts. These handy prints mark a great progress as compared with the monstrous volumes mentioned above. The classical commentary in Sanskrit has been added. It is wanting in the Jain Sūtra Battīsī which was a rather primitive undertaking (Haiderabad 1920), though Rsi (i.e. Sādhu) Āmolak⁴ had contributed a Hindi paraphrase.

¹ Uvās II app., Encyclop. of Religion and Ethics I, p. 259ff. Later publications see § 18.—A full account of Schools and Sects in Jaina Literature by Amulyachandra SEN, C 1931.

² ZDMG 46, p. 91, Ep. Ind. 2, 274. Acc. to the former place the discovery is due to LASSEN.

³ SPAW 1903, f. 11. PISCHEL lived half a century too early to see the foundation of the Prakrit Text Society on a large scale in 1953. For the first Volume see § 56.

⁴ The same as Amolakh Rājī, the author of *Mukti Sopān* (Haiderabad 1915), born in S. 1933, as is evident from the preface.

The most recent print¹ is without any commentary whatever. Its name, taken from *Ardhamāgadhī*, is *Suttāgame*. Both the *Battīsī* and the *Suttāgame* are *Sthānakvāsī* prints and, for that reason, they contain no more than 32 *Āgamas* out of the traditional 45.

§ 5. The old texts, in many cases, have been handed down to us in a very curious shape which makes them rather unintelligible for the unprepared reader. The copyists of olden time being confronted with innumerable repetitions have resorted, as can be easily understood, to abbreviations which, however, violated the context. Up to this day, the printed books pass over them as through thick and thin. The reader, indeed, is prepared to forbear as traditional and respectable peculiarities of Jain style a certain monotony of question and answer, dry lists, and long complexes (though not altogether void of euphony) of what has turned out to be metrical passages². But he is longing for a less clumsy wording. This might be easily achieved by a rational method of dissolving those abbreviations and by providing the necessary references, a method which would result in a readable text where the valuable trend of thought now often concealed would eventually appear in a lucid form. It goes without saying that critical examination and comparison of traditions will remain indispensable. Let it be admitted that the want of controllable oldest manuscripts is often a stumbling stone in the way towards that ideal of a critical edition. Hundreds of Jain works are still preserved in partly subterranean *bhandārs* where they were deposited centuries ago, and those precious libraries remained inaccessible since the conservatism of the owners could not overcome their disinclination towards their treasures being published. When BÜHLER was allowed to have a glance into the *baṛā bhandār* of Jaisalmer, he was misled as to the mass of what was preserved there. It was not earlier than a few years ago that a scholarly examination of *bhandār* manuscripts became feasible, and our thanks and res-

pects are due to Munirāj PUNYAVIJAYA for his working towards that noble aim¹

§ 6. The 'classical' Sanskrit commentary to the Śvetāmbara canon represents the climax of a vast scholastic literature. Its predecessors in Prakrit, the Nijjuttis and Cunnis, were, for a long time, neglected by scholars. We might even say that, in a certain sense, this is still true to-day, for the publications of Cunnis issued in the course of the last decades do not contain even the slightest illustrative or critical addition, though the merits of Muni JINAVIJAYA Acharya in laying them before the reader are undisputable. It was nearly half a century earlier (1892) that LEUMANN, on the ground of his own subtle investigations based not upon prints but upon manuscripts, has shown (ZDMG 46, p. 586) the importance of those voluminous products for not only Jain dogmatics but for the history of literature in general. Unfortunately the author did not pursue those researches he had characterized as "indispensable for the exploration of the Jain literature of several centuries", pointing out that the Kathās in the old commentaries often appear in non-Jainistic works. Still we possess his "Āvaśyaka-Erzählungen" (AKM 10, 2, 1897) which after the most subtle examination of the best manuscripts give the pure text of those old moral illustrations. It is a point of regret that no more than but four forms of that work should have been printed and that a continuation, though promised, should never have seen the light of the day. It was younger recensions of Jain stories that were translated and explored as to their motives and their importance for comparative history of literature by HERTEL and others. In his essay "On the Literature of the Shvetambaras of Gujarat" (1922) we find the following remarkable passage: "During the middle-ages down to our own days the Jains and especially the Śvetāmbaras of Gujarat, were the principal story-tellers of India. Their literature contains, in huge masses, the materials which the students of folklore, who wish to do true scientific work, should thoroughly study in preference to all the other Indian narrative

1. See ALSDORI in Festschrift Schubring, p. 59f

literature.” But HERTEL did not leave any doubt that in his opinion not even the preliminary condition, i.e. of critical texts and precise translations was fulfilled. As to his intrinsic studies of the Kathānakas for which he succeeded to produce parallels even from non-Indian sources, the reader is referred to WINTERNITZ’ History of Indian Literature Vol. 2.

Jain Sanskrit in the Stories, according to HERTEL, is a common people’s language with its usual carelessness and some borrowings from Prakrit or from the author’s provincial tongue; it must not be measured by the standard of classical Bhārati. This definition serves to weaken a severe judgment pronounced by BÜHLER (loc cit. p. 14) At other places in scholarly literature, too, peculiarities of Jain Sanskrit have been noted down. BLOOMFIELD in the second of four systematical collections¹ has pointed out, (1) the influence of Prakrit and an early stage of New Indian (Gujarati and Marathi) already mentioned, (2) in some cases hyper-sanskritization of words apparently Prakritic, (3) borrowings from dictionaries and grammars, (4) use of words of un-known origin. Apart from Amitagati’s Dharmaparīksā (ed. MIRONOW) this judgment was based upon Śvetāmbara works. A description of the origin and progress of linguistic studies in the Prakrits (Ardhamāgadhī, Jaina-Māhārāstri, Jaina Śaurasenī) and Apabhramśas in Jain literature is beyond the scope of this book.

When stopping further publication of the “Āvaśyaka-Erzählungen” LEUMANN had consoled the reader with his “Übersicht über die Āvaśyaka-Literature” to come out “in the very next time.” Materials from manuscripts and manuscripts only, a long list of which LEUMANN has given in ZDMG 45 and 46, had been collected for the purpose of laying bare the different layers of an extensive scholastic literature concerning certain indispensable (*āvaśyaka*) formulae of daily devotion. By this great work he was many decades ahead of his

1 Life and stories of the Jain Saviour Pārśvanātha (Baltimore 1919), p. 220; Some Aspects of Jaina Sanskrit (Antidōron, Festschrift Wackernagel 1923, p. 220 ff), The Śālibhadra Gāthā (JAQS 1923, p. 290-316), On Diminutive Pronouns in Jaina Sanskrit (Festschrift Lanman 1929, p. 7 ff)

time. But, unfortunately, in this case too, printing was stopped when the 14th form (in folio) had been composed. Not until 34 years later this fragment, rich in contents, but difficult to study, was published by the AUTHOR who was fortunate enough to find the proofs being preserved¹.

§ 7. All history of literature, a building, as it were, has for its ground-floor the bio-bibliographical materials. Jain research would have enjoyed the great luck of having them at its disposal, if KLATT's Onomasticon had been completed and printed. Eight volumes from his own hand in alphabetical order contain what was within his reach to collect data concerning Jain authors and works. But he fell severely ill and never recovered. The work was estimated to fill some 1,100 pages in print, but no more than 55 pages have been printed as a specimen thanks to WEBER and LEUMANN². The first to become a bibliographer of Jainism was GUÉRINOT by his "Essai de bibliographie jaina" (1906). A modern standard was not reached until 1944, when VELANKAR's Jinaratnakosa appeared, where the Jain works have been catalogued, while a second volume containing their authors is still waiting for being published. A primitive forerunner had been the "Jaina Granthāvalī" published by the Jain Śvetāmbara Conference in 1908.

Another fundament for Jain history are the inscriptions. GUÉRINOT's "Essai" was followed in 1908 by a "Répertoire d'épigraphie jaina." Though not the work of a specialist, yet LUDERS' "List of Brāhmī Inscriptions from the earliest time till about 400 A D. with the exception of those of Aśoka" is valuable thanks to innumerable inscribed allusions to the Order of Jain laymen and monks (EI 10, App. L.C. 1912.)

It seems to be a digression from our subject when we note that BUHLER in his academical lecture "Über die indische Sekte der Jainas" (1887) was the first to call up the interest of

non-scholars for Jainism, legitimated as he was to do so thanks to 17 years of official service in the then Bombay Presidency. Mrs. S. STEVENSON, trained in the Christian Mission of Gujarat, wrote her book "The Heart of Jainism" in 1915, thus challenging a strong resentment at least among the Digambaras¹. It is curious to see that, while this authoress regretted to miss true warmth of heart in the religion she described, PERTOLD in a public lecture approved of its being excluded from it². GUERINOT'S book "La religion djaina" (1926) was exposed to criticism as was the book just mentioned³. One year before (1925) H.v. GLASENAPP's by far more instructive and comprehensive work "Der Jainismus, eine indische Erlösungsreligion" had come into the hands of many grateful readers.

To the same author we owe his contribution to the Handbuch der Literaturwissenschaft representing Jain literature and writing according to the different literary species. WINTERNITZ' History of Indian Literature Vol. II, p. 289-356 (1920) which deals with the same subject is too well known for its merits for being praised here.

§ 8. Thus far we have registered western working for the public knowledge of Mahāvīra's religion. As to the countless pamphlets and journals through which the Jains themselves, for the purpose of propaganda, appeal to the general public, we but mention them here in passing. Of the publications useful for scholars we refer to VIJAYADHARMA Sūri's (s.b.) Jainatattvajñāna (in Festschrift Winternitz), JAINI's "Outlines of Jainism", P. C. Nahar's "Epitome of Jainism" and Ch. R. JAIN's "Jaina Law." Research further receives great help by *compilations* as are catalogues of private libraries, collections of Paṭṭāvalis and of Praśastis, biographies, etc. They

¹ Jagmanderlal JAINI A Review of the H. of J., Ambala 1925. Earlier, Mrs STEVENSON published "Notes on modern Jainism", Oxford 1910.

² O PERTOLD, The Place and Importance of Jainism in the Comparative Science of Religions (Bh without year), p 21. "I think this sentimental aspect is the least desirable in a modern religion, which must go parallel with the fast development of sciences"

³ Critically reviewed by Charlotte KRAUSE ZDMG 84, p 192-202, comp also FRAUWALLNER WZKM 36, p. 336 ff.

all, however, are overshadowed by the "Abhidhānarājendra", a Sanskrit encyclopedia in 7 volumes, whose Prakrit catchwords are taken from the canonical and scholastical literature of the Śvetāmbaras, a monumental work by VIJAYARĀJENDRA Sūri (1827-1907, Ratlam 1913-25). A glossary of the Canon in three languages is the Illustrated Ardha-Magadhi Dictionary of Muni RATNACANDRA in 5 volumes (Indaur 1923-32). Prakrits of all kind including that of the Jains have flown together to mix in the ocean called "Pāra-Sadda-Mahannavo, a complete Prakrit-Hindi Dictionary" (1928) by Pandit Hargovind Das SHETH. Precise data of places as well as large supplements will increase the value of that great work. Among the *periodicals* we should like to mention the Anekānt, Jain Antiquary, Jain Hitaisī where literature and history are being discussed by Jain authors, many of whom, of course, have contributed also to non-Jainist journals. Nearest related to the periodicals are the series (*grantha-mālā*). In many cases they represent a very remarkable file including rare and significant works provided with a scholarly introduction. It is a pity that many Grantha-mālās should have become known in the West only in fragments, if at all. The Śvetāmbaras can be proud of the volumes, apart from the Siddhānta, published by the Āgamodaya-Samiti, by the Devcand Lālbhāi-J-Pustakoddhāra, the Ātmānanda-Grantharatnamālā (Bhn, 1911 ff.), the Yaśovijaya-J.-Gr, started in 1904 and apparently the oldest Jain series, and many more literary undertakings which cannot be enumerated here. Our thanks are equally due to the Digambaras. A parallel to the Siddhānta are the classical Digambara authors. They have been printed and translated in the Sacred Books of the Jains (Arrah 1917 ff; Sanātana-J Gr.-M (Ben 1917 ff); Śrī Rāya-candra-J. Śāstra-M. (Bo. 1916 ff.) Mānikcand-J -Gr -M. (Bo. 1915 ff.) The most recent series is the Jnānapītha-Mūrtidevī-J.-Gr -M. (Banaras 1948 ff.), a younger counterpart to the Singhī-J -Gr -M (Bo 1933 ff) of the Śvetāmbaras, edited by Muni JINAVIJAYA.

§ 9 These intimations are merely meant to demonstrate the respectable activity within the Jain communities as to their

almost inexhaustible stock of literature, an activity radiating as far as to the field of Western research. This state of affairs can be dated from the first two decades of this century. It is true that it was HOERNLE who, as early as in 1890, could dedicate the first volume of his *Uvāsagadasāo* to VIJAYĀNANDA Sūri (Ānandavijaya=Ātmārāma, 1837-97) in grateful acknowledgment of various suggestions and corrections, though it is equally true that it was VIJAYADHARMA Sūri (1868-1922), never failing to help when being consulted by European scholars¹, who proved by far more effective. The renaissance just mentioned with the Śvetāmbaras at least is due to his lasting impulse.

For a long time research in Europe and America was known to the Jains to but a certain degree, that is to say, as far as their knowledge of English allowed. Books and articles in German and other Western languages frequently remained beyond their reach. Hence it follows that quite a number of data produced by them are well-known in Western literature. It is evident, therefore, that of all works of JACOBI's (1850-1937)² none have come to their knowledge than those written in English. But even this crop harvested on the Jain field by an all-round genial indologist was abundant enough for a Jain Conference in 1914 held on the occasion of JACOBI's second stay in India, to bestow upon him the honorary title of Jainadarsanadivākara. We are thus justified in this historical sketch in reproducing how to him, in several publications³, Jainism presented itself in view of its relation to other creeds and systems.

§10. On the foregoing pages it has been said already that research started from the similarity observed between

Mahāvīra's and the Buddha's teaching, those two central features which both result in a monk's life, touching each other in many respects and agreeing in considering Right Knowledge to be the means of how to get rid of the endless chain of rebirth. There is, however, a difference (among others) between them in that the Buddha does not share the high opinion of ascetic practices which, in Mahāvīra's belief, are essential for reaching the ultimate goal. Further differences will be found in metaphysics. But here the partner of the comparison¹ is not so much Buddhism as is the Sāṃkhya. In the Sāṃkhya the development of the world starts from matter that is imperishable and infinite as to quality going on in a determined sequel defined by means of Buddhist terms. The Jains, being far from the Brahmin way of thinking, do not acknowledge such a sequel, since, in their eyes, the world is eternal, though they agree with the Sāṃkhya in considering matter as being capable of developing in whatever direction. Moreover, logic compels them, as does the Sāṃkhya, to consider as important the transition (*pariṇāma*) from the one status to the next. And third, both are in harmony as to the original conception of the soul. "The Jainas call jīva all souls, the Sāṃkhya those that exist in the concrete world. Thus it seems that "soul" has been abstracted from "living being", that is to say, from a popular view." The same idea appears in the conception that the soul is as large as the body, a conception which is apparent with the Jains, while it is at least inferable from the original Sāṃkhya and Yoga. Both Jainism and Sāṃkhya pretend a plurality of bodies. It seems that this conception replaced the primitive idea of a plurality of souls at a time when the doctrine of the One Ātman could not be neglected any longer. This applies to the doctrine of Karman and of reincarnation following from the former and which, by the by, is a primitive idea as well. Both Karman and reincarnation are the fundamentals of the Sāṃkhya system as well as of that of the Jains. The very fact that both these systems, as they now stand, are so very

¹ Comp. W. BOHN, *Die Religion des Jainas und ihr Verhältnis zum Buddhismus*, *Zeitschr. f. Buddhismus* 3, p. 113-140, LEUMANN *Buddhism und Mahāvīra*, ibd. 4 (separate offprint, Munich 1921)

unlike to each other contributes to their common features being extremely significant, and this explains itself by their having embodied elements of common-sense view (Volksglauben). The time when this happened can be calculated thanks to non-Jainist testimonials of spiritual development as well as to chronology. Both agree in going back as far as the 8th century B.C.

The Jain system, moreover, exhibits archaic traits not found in other systems. Among them we have the theory of the elementary particles (earth, water, fire, wind) possessing souls, and the names of *dharma* and *adharma* for the media of motion and stop. The former can be rubricated as animism, whereas in the latter there appears the conception of "invisible fluids which by contact cause sin and merit"¹, a conception coming near to primitive sorcery. In later chapters of this book we are going to point out some more characteristics of such primitive or popular thinking ("Volksglaube"). It is very well imaginable that, apart from this basis, Mahāvīra made use of the conceptions of other systems², though his is not dependent on other systems we know of³. On the other hand it is probable that the Jains influenced the Yoga as taught by Patanjali, but in subordinate items only. There is no relation to the Vaiśeṣika system assumed by JACOBI, though it shares its atomistic character with that of the Jains. Since the similarity between both of them cannot possibly be ignored, the Jains maintained that a heretic⁴ named Chaluya Rohagutta was the inventor of the Vaiśeṣika system. For scholars⁵ take the word Chaluya as an illusion to the six (*cha*) categories in the "owl" (*uluya*)-philosophy, i.e. the teaching of the Kānādas or "crow-eaters", i.e. "owls." The doctrine imputed to Rohagutta is that he under-

took to add a third category (*rāsī*) called *nojīva*, to the natural and traditional ones, viz. *jīva* and *ajīva*. It seems impossible to prove that the Vaiśeṣika took its origin from that rather funny doctrine. Rohagutta was defeated dialectically by 144 items the detailed list of which, being based on the Vaiśeṣika, turns out to be a secondary addition.

§11. It is in this connexion that, last not least, we wish to refer to a subject common to both Jainism and Hinduism, without being entitled to pretend that the latter influenced the former. The belief in the force of magic syllables has its roots in the primitive stage of mankind. In Brahman literature it appears ever since the remotest times of antiquity. No wonder, then, that in later centuries we find it even in Jainism where a great many of Stotras resound with those incantations which even an illiterate might master¹. But the Jains, moreover, have found a way for educated people to bring forward their praise and desire in writing. A *viṣṣā* or magic formula appears in the peculiar manner of each consonant having the *virāma* and being followed by the respective vowel aksara (e.g. *t+u* instead of *tu*). In the Canon the *Mahānsiḥa* is the only representative² and thus goes conform with the *Angacūhiyā*, *Āyāraviḥi*, *Vihimaggappavā* and other texts of a decidedly later date. On principle the Stotras are directed to an Arhat, though other persons, among whom there are certain Hindu goddesses, receive veneration all the same. But an Arhat is far beyond the reach of human affairs. Being in the state of pure cognition exclusively and without both sentiment and will, he cannot bestow grace and favour unto those who appeal to him. Hindu influence seems to have been at work in placing at his side two adjutants, one male (*yaksa*) and one female (*yakṣī*, *yakṣinī*), the former presumably being not more than the shadow of the latter³ and it is these two that take care of a devout supplicant. That,

on a large scale, Hindu mythology was adopted by the Jains and brought in accord with their own principles is a fact known too well that it should be treated here in detail. The remarkable process of making out of a Bodhisattva a Roman Catholic Saint¹ finds its not less remarkable counterpart in the Jain ability of transforming epic heroes and other individuals into venerable persons of their own creed. The difference is that the said process in the West, thanks to translating a wandering subject into many languages, was unconscious, while the Jains with conscious energy satisfied their pious requirements at home.

II AN HISTORICAL SKETCH OF JAINISM

§12. Any historical sketch of the Jain religion has to deal not only with the objective results of research but also with the facts maintained by this religion. We shall consider the latter first. They are based on the assumption of the world having neither beginning nor end, i.e. being everlasting. Incessantly, though only within a small part of the universe, the wheel of time revolves with its spokes (*samā*), the gradations ranging from the paradisaical to the catastrophical period (§ 120) and back to the former, ceaselessly passing through the point denoting the present. The descending half-circle, and it is this where we find ourselves, is called *osappinī*, the ascending *ussappinī*. Either produces a number of prophets of salvation (*tittthagara*) as Mahāvīra is, and just as his teaching (*titttha*) is destined to last not longer than 21,000 years (Viy. 792a, comp. also § 120), so the teachings of all his precursors were doomed to degenerate and so will be those of all that come after him. But from every degeneration a new prophet will save the teaching, if only but after an immeasurably long intermediate period (*antara*). Since all this occurs periodically, the Jains can afford to be quite easy in stating the inevitable impendency of degeneration ¹

§13. Next to the spiritual supermen, to whom we shall return in due course, we have the temporal heroes. It is in them, in their social standing as well as in their personal names and those connected with them, that we first and most distinctly behold the influence of non-Jain conceptions and, mainly, of such pertaining to the Kṛṣṇa mythology. There are grand sovereigns or world-emperors (*cakkavaṭṭi*) who are the immediate counterparts of the common-Indian *cakravartin*. In the *baladeva* and *vāsudeva*, comprised as *dasāra-maṇḍala* by Samav. 152b, the two homonymous heroic figures have been generalized

1. Comp. AUTHOR, OLZ 1926, col. 910 ff.

into types, and Samav. 153a is consequent in calling these half-brothers *duve rāmakesavā* by then adding their names. The *kulagara*, finally, reflect the Brahman *manu* and the law-constituting ancestral fathers. During every half-circle covered by the ever revolving time-wheel¹ there arise 24 prophets, 12 grand sovereigns, 9 *baladeva* and as many *vasudeva*, and either 7, 10 or 15 legislators. It is these latter only that are traced back (Samav. 150 b) over the present half-course to the one immediately preceding, whereas for the one to succeed all different classes are noted (comp. also Tḥān. 455b, 457b ff.). And, what is more, from the uniformity regarding the cosmographic structure (§ 119) it follows that the appearance of all these men in our southernmost continent of Bharaha has its counterpart in the northernmost of Eravaya. So that, then, we hear (Tḥān. 76a ; Samav. 72b, 153b) of the corresponding men also in this continent, if only by their names, and, indeed, they make their appearance even in the nearest continents (§ 122), as Tḥān. 123b, if only by way of indication, shows (see also below). In this respect the continent of Mahāvīdeha is but rarely mentioned (Viy. 791a and, accordingly, Tḥān. 201a).

For discussing the individual classes we have to start from the fact that every half-course contains 6 periods (§ 120) within which the condition of the world either deteriorates—as is the case in the *osappinī*—or improves—as in the *ussappinī*. In the third of these periods, illustrated by the wheel-spoke of ‘good-bad’ (*susama-dūsamā*), that is to say in its last third, the legislators and founders of civilisation (*kulagara*) made their appearance, 15 in number acc. to Jambudd. 132b, and 7 acc. to Tḥān. 398a ; Samav. 150b ; Āv. 148. Their names are : Sumai, Padissui, Sīmamkara, Sīmamdharma, Khemamkara, Khemamdharma (thus far in Jambudd only), Vimalavāhana, Cakkhumam, Jasamam, Abhicanda, Candābha (in Jambudd. only), Pasenai, Marudeva, Nābhi, Usabha (in Jambudd. only). The last of these names is due only to unnecessarily adding the 1st Tīthagara. Without it we have 14 names after the example

1. *ega-samāe ega-juge* Tḥān. 76a ; Nāyādh. 223a

of the 14 Manu¹, though the 7 first names are for the most part rather poorly invented, and most certainly the second row of 7 is the original one. Now the kulagaras introduced punishments (*danda-nī*) which, however, consisted in not more than in admonition, warning and reprimand (*hakkāra*, *ma-kkāra*, *dhukkāra*) Every new kind² came to be of common usage with the 6th and 11th kulagara (Āv 165 f. : 135)

The following period "bad-good" (*dūsama-susamā*) contains all *Baladeva* and *Vāsudeva* (Jambudd 164b) or *dasāra* (Than. 76a, 123a f, Samav 72b) The former, dressed in dark, is characterised by the palmtree, the latter, dressed in yellow, by the Garuda in the banner, other attributes of the *baladeva* are the ploughshare, the club and the arrow, whereas of the *vāsudeva* they are the shell, the discus, the club, the spear, and the sword, so that the description (Samav 152b f.)³ closely follows the epic pattern. They both are masters of half the Bharaha We come to know (also Thān. 447a) their names in their pre-existence, their fathers and mothers, their teachers, the towns where they first came to wish for a certain form of existence (*niyāṇa-bhūmi*), the cause for this wish (*n.-kāraṇa*), and their 9 opponents, *padisattu*, later called *prativāsudeva* Since these informations are for the most part given in the way of popular verses we may well suggest the general knowledge of certain legends marked with regard to content In the Canon, however, the individual *baladeva* and *vāsudeva* scarcely appear at all (Samav. 63a). It is only *Kanha Vāsudeva* who in Antag 5⁴ plays an actual part, and in the Jain version of the epic Draupadī legend in the Nāya

1 This is the number in the Dig, comp v GLASENAPP, Festgabe für Jacobī p 337

2 Thān 398a renders the *danda-nī* as seven-fold the above mentioned plus *paribhāsa*, *mandala-bandha*, *cāraga*, *chavi-ccheya* Acc to Āv 166f the last 4 constitute the *danda-nī* coming in with Bharaha —To the common *nīti* it has to be added that its means are *sāma*, *bheya* and *danda* (Thān 151a) These three *attha-joni* are lacking *dāna*

3 In Veḍhas interspersed with prose

4 Comp KENNEDY JRAS 1908, 505-521

16 of the 6th Anga¹ Here in Kavila (Kapila) we come to know a *vāsudeva* contemporary with Kanha, though pertaining to a different continent (see above)

As to the world emperors we are informed in a similar way by Samav 152a, though in Jambudd 3 we have a detailed description concerning the career of the 1st *cakkavattī* Bharaha. This career consists in the obtaining of 14 imperial crown-treasures. In the armoury hall of his palace at Vinīyā the wheel(1) settles first and then shows him the way to the succeeding ventures². Bh. proclaims his sovereignty at three points of the sea-shore, at the Sindhu and at a cave in the Veyaddha mountains. At the two latter places he gains a magic fleece (*camma-rayana*) (2) and the rod(3) and by the former serving him as a ship he crosses the stream. The people of the Avāda-Cilāya are assisted by the Nāgakumāra causing a tempest to rage over the headquarters for seven days which Bh., however, is able to resist by means of his magic umbrella (4) and the crown-jewel (5), and the Av.-C. surrender. Further acquisitions made in this district are the prototype of all measures of capacity (*kāḡinī*)³ (6), a spouse (7), and a sword (8). On the Gangā Bh. receives 9 objects of priceless value (*nihi*, Thān. 448b, Jambudd 256b). Then there follows the ceremonial entry into Vinīyā. The imperial crown-treasures equally include the general (*senāvaī*), the chamberlain (*gāhāvaī*), the architect (*vaḍḍhaī*), the domestic chaplain (*purohita*), horse and elephant (9 to 14). After a long reign he performs the act of purging called *apuvva-karana* (§ 183), obtains the Kevala-cognition (§ 81) and enters the Nirvāna on the Atthāvaya mountain. This career is typical of all grand-sovereigns, for Thān. 298a says that they all gain the 14 crown-jewels. They are all considered to be animate (§ 101) as we know from Indian dramatic plays. Apart from being distin-

¹ Comp. LEUMANN, VIH OC III, 2, p. 541 ff. In addition there is the "Legend of Dvāravati's fall and Krishna's death" provided by Devendra in the comm. on Utt. (JACOBI ZDMG 42, 493-529, CHARPENTIER ibd 66, 675-678).

² The AUTHOR also GGA 1932, p. 293f. ALSDORF ZDMG 92, 472 f.

³ For a description see Thān. 434a, Jambudd. 225a.

guished by their names (Samav. 152b) the 12 *cakkavattī* are also distinguished by their bodily size¹, but this they share with the *baladeva* and *vāsudeva* on the one hand and with the *titthagara* on the other. Their period, too, is the *dūsama-susamā* with the exception of Bharaha who already lived in the *susama-dūsamā* as did the 1st Titthagara. But there are still other relations existing between the two species. The 5th to the 7th grand-sovereigns came to be the 16th to the 18th *titthagara*, and of the latter the first was actually an emperor (Samav. 42b), even though he is not listed as such a one.

In the following we give the Śvet-names of the series² in Bharata as have been discussed above. The *kulagara* temporarily precede the *cakkavattī*, Bharaha is the son of Usabha. The 5 first members of the series 2 to 4 lie between cakk. 2 and 3, the 6th and 8th fall in the time of cakk. 7 and 9, the 7th and 9th lie between cakk 8 and 9, and between 11 and 12 resp.³.

1. *cakkavattī* : Bharaha, Sagara, Meghavam, Sanamkumāra, Santi⁴, Kunthu⁴, Ara⁴, Subhūma, Mahāpauma Harisena, Jayanāma or -sena, Bambhadatta.—2. *baladeva* : Ayala, Vijaya, Bhadda, Suppabha, Sudamsana, Ānanda, Nandaṇa, Pauma (=Rāma Dāśarathi), Rāma (=Balarāma).—3. *vāsudeva* : Tivitttha (-tṭhū), Duviṭṭha, Sayambhū, Purisuttama, Purisa-siḥa, Purisapundariya, Datta, Nārāyana, Kanha —4. *padisattu* : Assaggīva, Tāraga, Meraga, Mahukedhava, Nisumbha, Balī,

1 The size most certainly also determined the measures of the three giant figures representing Bharaha's younger brother Bāhubali. Acc to the legend Bh himself raised a statue to him with B measuring 325 dhanu. He is often called Kāmadeva among other names, and acc to M GOVIND PAL IHQ 4, 270-286, the Kanarese name of Gommaṭa, by the mediation of the Konkani, stems from the synonymous word Manmatha. The most ancient, largest and most famous of the three statues (57 ft high) was raised about 980 A D by Cāmuṇḍa Rāya—Gommaṭa Rāya near Sravana Belgola in Mysore, a second, dated Śaka 1353, near Karkala, and a third, dated 1525 by Śaka, near Yenur (Verur), both places in South-Kanara. Comp PAL 1bd, VENKATASUBBIAH IHQ 6, 290-309, early reports by MACKENZIE IA 2, 129-133, BURNELL ibd 353-357.

4 *titth* 16—18 (s b.) JACOBI (SBE 45, 86) thinks it possible that this name developed from Kakutstha, but this derivation asks for a number of hypothetical links.

Pahārāga, Rāvāna, Jarāsandha. By adding the spiritual series of the 24 *tutthagara* to these temporal series 2 to 5 later authors come to count 63 men "of mark" (Śvet. : *śalākā-purusa*, Dig. : *lakṣaṇa-p.*) leaving the mentioned identities out of consideration. 27 out of these 63 are related to the Kṛṣṇa legend. This has been led back by JACOBI to the spreading of the teaching towards the west¹. But we have seen already that Kaṇha had been playing a part at all times, and also Aritthanemi, a brother-in-law of Kṛṣṇa, is included in the system since the time we know it.

§14. In now turning to the spiritual heroes we have to distinguish between such who *find* and such who *preach* salvation, and as to the former we may denote them as the *patteya-buddha*. Viy 895a places them next to the latter though fails to give any particulars for doing so, nor do we find any in the two only remaining and, by the way, later passages of Samav. 123a and Nandī 203a. The appertaining persons first appear in the narrative tradition of the Āvassaya². The *preachers of salvation* (*tutthagara*, *arahaṃ*, *jina*; Viy. 583a and Ṭhān. 302a : *devādhudeva*) of the current *osappinī* are called : 1. Usabha, 2. Ajiya, 3. Saṃbhava, 4. Abhinandana, 5. Sumai, 6. Paumappabha, 7. Supāsa, 8. Candappabha, 9. Suvihī Pupphadanta, 10. Siyala, 11. Sejamsa, 12. Vāsūpujja, 13. Vimāla, 14. Ananta, 15. Dhamma, 16. Santi, 17. Kunthu, 18. Ara, 19. Malli, 20. Munisuvvaya, 21. Nami, 22. Aritthanemi, 23. Pāsa, 24. Vaddhamāna or Mahāvira. For Paumappabha and Candappabha Viy. 792a has Suppabha and Sasī, in an isolated inscription (§ 25) Ara is called Nāndyāvarta; Aritthanemi is frequently shortened into Nemi. The entire series is closely dealt with by Samav. 150a and Āv. 230 ff. though this is being done in comprising gāhās only. They record the names of each in their pre-existence, those of their parents, of their first alms-givers, pupils both male and female, and other items. What else we find in the Samav. and in the Ṭhān. as well

1 Reports of the VIIth OG (Vienna 1889), p 75-77 ; IA 16, 163f

2 The part they play with the later commentators Devendra and Bhāvavijaya has been dealt with by CHARPENTIER in the light of the Jātaka and epic texts (Paccekabuddhageschichten Uppsala 1908, JAS. 1911, 201-255)

rests in correspondence to the purpose of these works, on figures which, faithful to the system, are mostly very large. Thus we learn, though but incompletely and frequently without any recognizable principle, at what age a Tīthāgara devoted himself to monastic life, how many groups of disciples and group-leaders he had, how many among his followers owned a certain amount of spiritual knowledge and were endowed with certain kinds of cognition, how old he came to be, how tall he was, etc. Jinac. 184-203 in dealing with those from 2 up to 21 confines himself to giving the distances of the one from the other, from Mahāvīra or from the present of that time. A number of them is attributed certain colours of the body (Thān 98b)¹, and, what is more, in pairs. 6 and 12 are *pauma-gora* red, 8 and 9 *canda-gora*, white, 19 and 23 *piyangu-sāma* dark, and 20 and 22 *nīl'uppalā*, blue. The remaining are golden. For a smaller part these colours are due to the names of their bearers, and this, too, goes back to legends. Such is equally the case with reports stating, for instance (Samav. 42b), that 23 preachers of salvation (2-24) were minor princes (*mandali-rāja*) prior to their monastic life, or, as Thān. 351b gives it, that five (12 19 22-24) were *kumāra* when becoming monks. By the earliest plastic image of a Tīthāgara handed down to us (§ 25, comp. also § 24) it is proved that their representation showing merely their typical features was given personal traits by adding a symbol. The Canon does not refer to such symbols. For the most part they consist in animals (for 1-4 . bull, elephant, horse, monkey . for 23 and 24 . snake and lion), but also in the red and blue lotus (6 and 21), in patterns (7, 10, 15, 18), in the water-jug (19) and in the shell (22)². A direct reference to the name of the Tīthāgara is made merely by the bull of the Rsabha, Mahāvīra's lion may be connected with the words *sīh'ubbhava*³.

¹ For minor deviations with the Digambaras see JAINI, Outlines of Jainism

² For a specification see v GLASENAPP, Jainismus p. 491

³ So instead of *sīhabbhava* (the AUTHOR ZDMG 104, p. 262) Comp the *sīhāvalokita* and other lion-like behaviour of the new-born Bodhisattva in Lalitavistara VII

bhūenaṃ appānenam kucchimsi gabbhaṃ vakkante Āyār. II p 121, line 22 (to supply *gabbhaṃ*)

No more than the Canon refers to the symbols does it refer to the two deities of male and female sex associated with every Tīthāgāra. They are called *yakṣa* and *yakṣiṇī* or *yakṣī* or *sāsana- (śrūta) devatā*. The latter may well have inaugurated the conception in so far as it was the commandment of Jina that first took on human shape, i.e. female shape in correspondence with basic Indian conceptions. Moreover, there was the demand for granting powers establishing for laymen since the preachers of salvation were beyond reach of their supplications¹. Their names, again, disclose obvious suggestions of the Brahman sphere of ideas². For these as well as for other persons and objects pertaining to the later cult comp v GLASENAPP, Jainismus p. 362ff, 492³.

§15. At the beginning of her pregnancy the mother of a Tīthāgāra has experienced 14 visions by dreaming as has such of a *cakkavattī*, whereas the mother of a *vāsudeva* has visioned 7, such of a *baladeva* 4, and such of a *mandaliya* 1 out of those 14. The germ for these figures is in the 14 dreams of Mahāvīra's mother (Jinac. § 32 ff)⁴. Acc. to Vīy. 709a we have (to refer to this here) 42 normal and 30 major dreams (*mahā-suvina*) of the kind of dreams in pregnancy mentioned above. Ten dreams were visioned by Mv when still a *chaumattha* (§ 81, also Thān. 499a). 14 dreams immediately lead to true cognition and in most cases to salvation within the same existence. The dream belongs to the 8 possible omens (*nimitta*, Thān. 427a) and is considered rather incongruently⁵

3 A movement against the Śrūta-d see § 33

4 A representation in colours was reviewed by HÜTTEMANN, Baessler-Archiv IV, H 2 The Dig know of 16 dreams

5 *nimitta* as well as *upphāya* a. o. pertain to the region of the pāva-suya-pasanga (Thān, 45/a)

as a special kind of visionary power (Ṭhān. 430b) together with *sammad-damśana* etc. up to *kevala-d.* (§ 82) to which Sthān. 430b remarks that, properly speaking, the *svapna-darśana* pertains to the *acaksur-d.* (§82). It comes in during the state of semi-trance (*sulla-jāgara*) and it is either true (*ahātacca*), of temporal extension (*payāna*), goes back to some day-event (*cintā-suvina*) or not (*tavvavariya*), or, finally, it is vague (*avvatta-damśana*). The dream of a *saṃvudda*, i.e. of one who exercises *saṃvara* (§169), is necessarily true, however, while this is not positive with the *saṃvudda* and the *saṃvuddāsaṃvudda*. All this is taught by Vīy. 16, 6 (709a ff.) perhaps in identity with the Suminabhavana referred to by Vav. 10, 28, or with the Mahāsuminabhāvanā quoted at other places.

The schematic structure of the life as lived by a preacher of salvation equally becomes clear by Jambudd.5 describing the ceremonies conferred by the gods on every new-born Tīthagara. The *disākumari* perform the preparations. Sakka and his gods, the latter being summoned by Hari Negamesi (§17), betake themselves to the birth-place. After the mother has been sunk into deep sleep a copy of the child is being created along with 5 Sakka who themselves take the Tīthagara to the sacred place in the Pandaga grove of the Mandara. Here it is Accuya who, with the assistance of the other gods, performs the act of consecration by anointing and adorning. Īsāna creates 5 of his like who wash the Tīthagara, Sakka 4 white bulls whose horns join above in the shape of water streams so that a vast flood pours down upon the head of the consecrated. 5 other Sakka then take him back to his mother's side removing the copy. By order of Sakka and Vesamana the Jambhaga gods finally bring in all sorts of treasures, and in the end they all return to their abodes.

The end of the Tīthagara career is discussed by Jambudd. 156b, though the text fails to mention any fixed locality. Acc to the legends it is invariably the mountain of Sammeta or Pārasnāth, a name referring to Pārśva (Pāsa). It was only Usabha who found the Nirvāna on the Kailāsa, Vāsopujja in

Campā, Ariṣṭhanemi on Gīrnār, and Mahāvīra (s.b.) in Pāvā. The cremation of the corpse is performed by all godly princes under Sakka's leadership. As we read in Vīy. 502b the relics enjoy adoration in the heavenly sphere. This description holds good in any case even though the author here but refers to *Usabha* whose biography which for the most part coincides closely with Jinac. 204-228 is related in the preceding passages. Ranging first in the sequence and, for that reason, frequently called Ādinātha in later times Usabha (Ṛsabha) enjoys the advantage of a more detailed representation which in Āv.2 is explicitly proclaimed to be universally accepted; anything the like does not occur until the end of the sequence (s. b.). Ṛsabha who, acc. to Visnu-Purāṇa 2, 1 was a world emperor to become a naked ascetic and to die the fasting-death¹ is sure to have come to the Jains most opportunely as ranging first in their sequence.² The extended description of the late Bhāgavata-P. (5, 6, 8-11) is connected with a vengeful allusion to Jainism flourishing in "Konka, Venka and Kutaka" thanks to Ṛ.'s travels in those regions. As is mentioned ibd., 5, 15, 1, but not in Visnu-P., the same has happened with *Sumati*, Bharata's son. The person of *Mallī* is (Ṭhān. 400b) identical with that of the king's daughter referred to by Nāya. 8. There she is called by the name of *Mallī arahā* and incidentally so from the moment (Nāyādh. 148a) when, on account of her report in front of her six suitors, she comes to remember earlier adventures. Her naming as Arhat always remains masculine, and the gods hail her (Nāyādh. 151a none else than Mahāvīra, Jinac. 111) as *Bhagavaṇ loga-nāha*. Nor does the latter figurative representation distinguish her in any way from the others. All this is a matter of course since sexual qualities are not inherent in a Siddha any longer. The Dīgambaras do not know of *Mallī* having been a girl (comp. § 30).

¹ The first allusion made to the above mentioned passage was by WILSON (Works, Vol 7, 104) Comp also JACOBI IA 9, 163

² No trace in the Yajurveda of "the Tirthankaras Ṛsabha, Ājita-nātha and Ariṣṭhanemi", as Radhakrishnan (Indian Philosophy I, 28f) will have it.

§ 16 JACOBI expressed the idea¹ that among the Tīthāgara such men were admitted who were dear to those communities that had attached themselves to Mahāvīra. This would have its counterpart on a larger scale in the structure of the Hindu pantheon. Provided that Mahāvīra's community really gained in strength by the incorporation of whole bodies of sects, we must, however, bear in mind that the Tīthāgara are separated from each other by "astronomical figures", whereas those persons must have lived more or less distinctly in the memory of the contemporaries. As is the case with so many characters of the Brahman legends we can neither prove nor can we definitely dispute the assertion that the preachers of salvation rely on individual persons. The lowest rungs of the Tīthāgara ladder leading from primeval times up to the present are more or less clearly visible in the light of history.² Yet we would be more correct in saying that the ladder reaching from an historically attested experience on dogmatic grounds far up into the past is still hit by this light at a point not far from its foot. The question to be asked is how far up this is the case. We meet *Aṛitthanemi* in Nāya 5, Antag 1-5, Vanhid ; Utt 22. He is placed within the Kṛṣṇa circle as the brother-in-law of Kamsa, the scene is Dvāravatī (Bāravaī). In spite of his being more frequently referred to than his precursors, yet *Aṛitthanemi*—he lived to the age of a thousand years—is by no means historically more tangible than they are. The only thing to be advanced might be that in the year of Mahāvīra's Nirvāṇa he had been dead for 84,000 years (Jinac 182f), because it should be remembered that the figure of 84 or either of its plurals frequently appear with the Jains and elsewhere where they only fail to give precise details for something founded on fact. Acc to Jinac 184 *Aṛitthanemi*'s precursor, *Nami*, died half a million years back, and as is the case with all other figures in the lives of the Jinas, so these intervals, too, increase into the gigantic by retrogradation. *Pāsa*, however, acc to Jinac 168 f died 250

¹ SBE 45 XXXII

² By discussing this problem Chimanlal J. SHAH starts his book on Jainism in North India 800 B.C.—526 A.D. Lo 1932. Review by the AUTHOR in OLZ 1934, col 126-128

years before Mv (1230 minus 980) at an age of one hundred years. Ever since STEVENSON came to point out this moderation in quoting figures¹ these two dates have served as an argument for Pāsa's being an historic person, though what else we are told of him in Jinac. 149f is merely a copy of Mahāvīra's biography with the exception that Pāsa is said to have been born in Benares and to have died on the Sammeya mountain in Bihar. Nor do we learn anything of importance² from Pāsa's rôle Nāyādh II 1 and Pupph 1, 3. But he is attested as a historic personality by other passages in rendering his teaching and reporting on his followers. Mahāvīra's parents are said to have belonged to Pāsa's lay-followers (*Pāsāvaccijjā samanōvasagā*, Āyār II, 15, 16), and in his lifetime—as is confirmed by the Sāmaññaphala-Sutta of the Dīgha-Nikāya)³—there have been teachers (*Pjjā therā bhagavanto*, Vīy 134b, 247b) and monks (*anagāra*, Vīy 99a, 439a) in accordance with Pāsa's intentions. The word *avaccijja* (also Therāv 2) indicates the spiritual filiation⁴. Pāsa was obviously of a winsome nature, for he bears the constant title of *puris' ādānīya* which seems to be the oldest precursor of the modern occasional titles of Lokamānya, Deśabandhu, Mahātman, etc. *ādānīya* means as much as *ādeyya* which in the Karman theory stands for "suggestive"⁵. Both sects were on absolutely friendly terms, and for this we are given some valuable proof by the conversation of two of their leading representatives Rāyap⁶ and Utt 237. We are assured (Vīy 247b, 454a) that already Pāsa had conceived both the shape and the eternity of the world (§ 103) in a way as taught by Mahāvīra, though (in the second passage) the latter insists that he came to discover it independently. Yet

1 Kalpa Sūtra S XII Comp JACOBI IA 9, 162f COLEBROOKE (Misc Ess II, 212) does not make any use of this argument when calling P "perhaps the real founder of the sect".

we are not able to draw any immediate inferences on Pāsa's system from this conception of his since the idea of a lower, an intermediate, and an upper world is in itself not singular. Mahāvīra's laymen are instructed (Vy. 138a) by Pāsa teachers that self-discipline (*saṃjama*) leads to the suppression of the "influence" (*ananhaya*, § 168) and asceticism (*lava*) to purification (*vodāna*, also 140b), and to this Mahāvīra agrees. And yet, perhaps, he himself went beyond it, provided it was he who placed those two pairs into the causal association known, acc. to Thān. 156b, as : *savana, nāna, vinnāna, paccakkhāna, saṃjama, a., l., v., akiriya, nūvāna, siddhi-gai-gaṃana-pajjvasāna*. But it cannot be disputed that in practical ethics we see a development beyond Pāsa's ideas where the four-fold morality, the *cāujjāma dhamma*, is replaced by the *panca-mahavaiya sapadāḥkamana dh.* Pāsa's postulation (Rāyap 118a; Thān. 201 a) was: not to damage anything living, not to commit anything untrue, and neither to take what has not been given (*adinn'ādānāo veramana*) nor to give away (*bahiddhādūnāo v.*). The last word by Sthān. 202 a is taken as *bahiddhādāna* and commented as "accepting (*ādāna*) from outside", i.e. the accepting of things not belonging to the monk's standard outfit. This prohibition is said to include the "possession" of a female individual. Thus, as Abhayadeva adds, Pāsa's *fourth* commandment would correspond with Mahāvīra's both fourth and fifth (sexual abstention and non-possession (§ 171). The former of these two LEUMANN sees expressed in *bahiddhā-dāna* (sic), "a decent term for copulation¹ (the delivery of sperm)". Thus it is Pāsa's *third* vow that corresponds with both the third and fifth of Mahāvīra's including prohibition of any appropriation other than by gift as well as by acquisition. At any rate, it is a merit of Mahāvīra's that he did away with a certain vagueness in the terms of his predecessor and made his fifth commandment applicable for both sexes. Utt. 23, 26f. and probably also 87 indicate that this act of extension was at the same time a process of revival, and this, to be sure, is the case, since it was in the nature of the two founders. Moreover, this is indicated by the above-mentioned view according to which

the teaching experiences a decline until a new preacher of salvation comes to make his appearance. And it was also the difference existing between the teachings of Pāsa and Mahāvīra that had to be perpetuated within this view. This was done in a way (Viy. 791 b; Thān. 201a) that all Tittthagara prior to Pāsa are considered preachers of the *cāujjāma dhamma* with the exception of Usabha¹, and in the timeless continent of Mahāvīdeha (§ 113) it is even all 24. Likewise there is a difference being construed (Thān. 296a) in that the same preachers of salvation including Pāsa had no difficult career as teachers whereas Usabha and Mahāvīra had (*purīma-pacchimānaṃ jnānaṃ duggamaṃ bhavaṃ, taṃ-jahā duāikkhaṃ duvibhajjaṃ dupassaṃ duitikkhaṃ duranucaraṃ*). It is possible, to be true, that the system handed down to us was complete already with Pāsa, though it fails to be probable, and certainly it cannot be proved. What is said by Āyār. II 15, 16 about the religious life and death of Mahāvīra's parents is out of the question with regard to Pāsa's teaching, particularly since it includes the confession (*āloettā . . . paḍikkamittā*). For it was by this confession that Mahāvīra's rules differed from those of Pāsa, or else one would not have spoken of the *panca-mahavvaiya sapaḍikkamana dhamma* in contrast with his *cāujjama dh.* Mahāvīra appears as much too original a thinker than that he should have but repeated what had been in existence since long without adding something of his own². Otherwise the system would show junctures. But this is not the case.

§17. For our knowledge concerning Mahāvīra's life and personality we have as ancient coherent sources³ the Uvahāna-suya Āyār. I 9, then Āyār. II 15 (the Bhāvanā) and basing upon it Jinac. 1-148, finally Āv. 458ff. A number of detailed traits is rendered by Viy.⁴ The birthplace of Mahāvīra was the

4. Comp. The AUTHOR's Worte Mv. 's p. 18ff.

northern borough of Vaiśālī, the Besārḥ of our days, called Kundapura (Āyār.) or Kundagrāma (Jinac), the Basukund of to-day¹. It was here where the nobleman (*khattiya*) Nāya lived whose name is rendered in Pali by Ñātika and in Sanskrit texts rightly by Jnātr. The father belonging to this clan—and consequently also his children—were Kāśyapa acc. to the Gotra, while the mother was a Vāsisthī. Their names are Siddhattha and Tisālā with two more being added to each, the latter being but sporadically referred to and probably so as to serve merely the uniformity with the three names of the son to be mentioned presently. Tradition gave great importance to Mahāvīra's Kshatriya and not Brahman descent, and with the Śvetāmbaras at least it did so to the degree that it adopted the legend of Baladeva's embryonal transplantation from Rohinī into Devakī² and represented Mahāvīra as being the physical son of the Brahman couple of Usabhadatta and Devānandā in the Brahman borough of Kundapura. Acc. to Vīy 456a, however, Devānandā is acknowledged by Mahāvīra as being his true mother. In Vīy. 218a he refers to the rôle of transplanter played by Hari Negamesi³, but he does so without any relation to himself.

The name of Mahāvīra is an attribute inspired by profound reverence and traced back to the gods. The curtailed form is Vīra *samana*, as he is said to have called himself, is as far from being a proper name as is, for instance, "the Son of Man". His civil name is Vaddhamāna, "the prospering one", which in the texts, however, is interpreted as "the promoter". The verb *vaddhai* does not occur,⁴ but only *vaddhai* leading up to the by far less frequent form of Vaddhamāna (Āyār II, 15, 12, Samav 151a). As a member of the clan of the Nāya Mahāvīra is called Nāya (*putta*) (Vīy 323b), as a Kāśyapa *Kāsava* (a o Utt 2, .

⁴ Only *vaddhāve* "to congratulate", comp PISCHEL, Gr § 291 F. An historical mon. of Vaiśālī was compiled by VIJAYENDRA sūri (Bq 1958, Guj.)

Dasav 4), after the town of Vaiśālī, in whose sphere of influence he was born¹, by the name *Vesāliya* (Sū I 2, 3 end, Utt. 6 end)², and *Videha-dinna* after his native country (Āyār. II 15, 17; Jinac. 11 0). He is addressed as *bhante*.

Vaddhamāna married Jasoyā, a Kaundinyī³, with whom he had a daughter bearing the name of Anojjā or Piyadamsanā. She later became the mother of a girl. Her husband is not referred to in the two biographies, but we know⁴, if not from Viy. 461a ff so from the Āvassaya tradition, that his name was Jamālī. His name was suppressed since it was with his son-in-law (who is said to have been also his nephew from the side of sister) that Mahāvīra went through the trying experience of disobedience and heresy which came to be the "first heresy"⁵ in the history of the Jain church. Since his grand daughter is called a Kauśikī, the *khattiya-kumāra* Jamālī must have been a Kauśika as well.

§18. Vaddhamāna having kept his promise not to leave his parents as long as they lived⁶ and having obtained the consent probably to be given by his elder brother Nandivaddhana, left his native country at the age of thirty after having arranged the distribution of his property and his heritage in the course of one year. It speaks for his inclination towards asceticism that he did so at the beginning of the cold season. Thirteen months later, i.e. in winter again, he decided to rid himself of his clothes as well⁷. This was to be the first great step out of Pāśaism which,

1 JACOBI, SBE 22 X f

2 In this connexion it may be assumed that he was spoken of as *Vesāliya sāvaya* as was the *niyantha* Pingalaga of Śrāvastī (Viy 112b, in the comm. a fantastic explanation)

3 This doubtlessly underlies the *Kodinna* of the texts. Comp. also Ajjava Kodinna Samarāicc with Ārjava Kaundinya Samarādityasamksepa 1, 65

4 For the following see LEUMANN Ind Stud 17, 97 ff

5 Out of 7 referred to by Thāṇ 410a and the Āvassaya tradition, comp. LEUMANN's essay, Ind Stud 17, 91-135. These 7 heresies (*pavayana-niṇhava*) are more interesting in other respects (§ 38) than as to the history of dogmatics. For Jamālī's heresy see Viy 461a ff. For the 8th *niṇhava* of the Bodiya Sivabhū see § 26

6 This interpretation of *samalla-paṇṇa* implies that they were not willing to let him go. Gautama the Śākya paid less respect to his father's wish to keep him at home. Another interpretation of *s-p* would be that he now was in a position of keeping his vow (?) to become a homeless monk.

7 As SHAH, Jainism in Northern India, p 25, supposes he did so in a state of trance.

as is demonstrated by Utt 23, 19, knew of clothed adherents only. The ballad Āyār. I, 9, describing his early ascetic life and the austerity of his conduct further tells us of the *samana bhagavaṃ* devoting himself to meditation behind a wall of man's height surrounding him on all sides (*poriṣi tiriya-bhūtti*). This caused a great sensation, while, on the other hand, by his solitary and disobliging bearing he annoyed the people who did not fail to vent their anger on him. Festivities, though he took part in them, were indifferent to him. For more than two years he neither drank nor used cool water, and it was during this period that his ideas grew to maturity. It may be mentioned here that he came to cognize the animatedness of all physical substances, plants and animals, the up and down in the forms of existence, the Karman as being its cause, its influx by sensual perception and activity, and the woman as its mediator. The monastic basic laws equally took shape in that time. Perhaps we are correct in interpreting Āyār I 9, 1, 22 by saying that after those two years and two months Mahāvīra resolved to take up that vagrant life which was to last for more than twelve years¹. Travelling towards the east he came as far as Lādha in West Bengal (Lādh, Rādh, Rārḥ) containing Vajjabhūmi and Subbbhabhūmi, the land of the Suhmas. This period was characterized by utmost privations caused by inhospitable and verminous quarters and many hardships owing to climate, stinging plants and insects, and wicked inhabitants who set dogs at him and ill-treated him. Mahāvīra himself made his life ascetic by the choice of his food, by fasting and by standing back behind animals and humans in need of help, while nothing is being said of self-castigations in bodily positions as incorporated into the system. The Uvahāna-sūya closes by rendering that description. The two other texts have merely vague generalities ending up those twelve years by Mahāvīra's entering into omniscognition. In the Bhāvanā "both the possession and the acquisition of cognitions . . . thread the preceding biographical

¹ Āyār II, 15, 25, Jinac 120 *pa-telasa* Āyār I 9, 2, 4 means the same as is clearly stated by the Cunnī

sketch (p. 121 f., 130 f. of the edition)''¹. Here from the dogmatic view it is traced that even when still an embryo Mahāvīra was in possession of the first three kinds of cognition (*tinnānō-vagaya*)² and the way how at the beginning of his monastic career the fourth (*manapajjava-nāna*) made its appearance³. By the fifth kind, the *kevala-varā-nāna-damśaṇa*, coming in he started teaching. But, to be true, by all this we are not given the description of an intellectual development in our sense.

In the sources hitherto considered there is not a single word being said concerning the rôle that is acted by Gosāla Mamkhali-putta in Mahāvīra's life. He was the head of the Ājīvikas⁴ and in this position, acc. to Pali reports, he was the successor to Kissa Samkicca and Nanda Vaccha. Thus it follows that the sect must have existed for some time yet. Vīy. 15 gives a report regarding Mahāvīra's relations to Gosāla⁵. According to them Gosāla came to be Mahāvīra's pupil in the latter's second year as a monk and remained to be so for six years. Then their relations came to a rupture, however, and Gosāla went his own ways. It was not until 16 years later that both met again though for a violent contest only. Gosāla died nearly immediately after, i.e. 16 years before his antagonist. This report of Vīy. has long since been judged as biased and hateful. Critics went to the length of making Mahāvīra a disciple or adherent of Gosāla to whom they say he was indebted for the biological system proclaimed by himself to be his own. For these and further questions the reader is referred to BASHAM who has exhaustively treated the matter offered by literature and inscriptions, including materials from the South⁶. Gosala is said to have introduced

a division of humans into six different colours which has its parallel in the Jain *leśyā* theory¹. This theory appears to be strange in Mahāvīra's system (§ 97), but here, again, it is not certain that it were borrowed from Gosāla's teaching, and it may well be possible that here as well as there the idea reflects primitive conceptions. On the other hand JACOBI has made it to appear probable² that some practices of ascetic nutrition as exercised by Jains originate from the Ājīvikas, and if Mahāvīra, as we have seen, put up with clothing thirteen months after having entered into monastic life, then it follows that this fell in the very second year which is reported to have brought about his relation to Gosāla. When, on a summer's night, the cognition of omniscience flashed upon him, Mahāvīra was on the field of the farmer Sāmāga near the town of Jambhīyagāma on the northern bank of the Ujjuvāhīyā. Not far off that place there stood a Sāl tree which accordingly entered into the hagiology as Mahāvīra's *ceyya-rukka*, thus reminding us of the Buddhists, and which served as an example for that of all preceding Tīthagaras (Samav 152a). This experience naturally did not put an end to his vagrant life, but with his fame increasing the vicissitudes he had to suffer from the side of humans ceased and changed into respect and reverence. As before (Jinac 119) Mahāvīra continued to be on the way for two thirds of the year putting up in villages for one night and in towns for up to five; for four months he remained stationary owing to the rainy season. Jinac. 122 gives as unverifiable list of the places where he did so, i.e. in the course of the time up to fourteen times. We here but mention as such also known elsewhere those of Campā, Vesālī, Rāyagīha, Nālandā, and Sāvattihī. None of these places is situated on the sea, though in the similes attributed to Mahāvīra (Nāya 8 11) the sea plays an important part, to say nothing of the Jainist world view (§110. 121). Places related to Mahāvīra's activity as a teacher are frequently referred to by the Canon, and those mentioned in the Viy. are to a certain degree trustworthy thanks to its special position (§ 45). Rāyagīha, of all places the most frequently mentioned

1 LEUMANN, loc. cit 330 f

2 SBE 45, XXX f

both in the *Viy.* and the *Jinac.*¹, was the capital of Prince Seniya, the Bimbisāra of the Buddhists. Mahāvīra was a relative of his by Cellanā, the daughter of his uncle Cedaga, Prince of Vesālī², and Seniya's successor, Kūniya (called Ajātasattu in Pali texts)³, was also his protector. To the list of the cities mentioned above the *Viy.* adds further the name of Kosambī⁴. The various other places referred to in either text cannot, however, be mentioned here. Mahāvīra did not stay at these places themselves, nor even during the interval of the long rainy season but—as is shown in *Jinac.* 122 by the word *nīsāe* attached to the indication of place—following the examples of other preachers he dwelt at a nearby *ceiya* regularly mentioned by its name, while nothing is being reported concerning its outward appearance⁵. As is described in the *Uvav.* at great length in poetical language, the princes, their noble attendants and the crowd used to leave the town in order to listen to his preachings, and *samosarana* is the word designating not only Mahāvīra's going out to preach and the pouring out of those eager to listen, but also his setting up the fundamental teachings and both the place where the Kevalin teaches prepared by other religious-philosophical sects (*Sūy.* I 12) and later (*Āv.* 5) also by celestials, and the audience assembled around it.

§19. Acc to the Pali texts Mahāvīra was a contemporary of Gautama Buddha, but although for decades they both wandered about one and the same area by no means very extensive preaching and teaching, there is no word being said as to their having met. Buddha is said to have survived Mahāvīra. This

4 At one time the believers in Vesālī were cared for by Jayanti who belonged to the laity (*Vesālīya-sāvayānaṃ arihantānaṃ puṇḍra-sejjāyari*) She was the sister of Sayāniya, Prince of Kosambī, who consequently took Migāvaī, another daughter of Cedaga, for his wife from Vesālī Her son was Udāyana (*Viy* 556b)

5 Differently with the Buddhists, comp B C LAW, *Studia indoiranica* p. 42 ff

information, however, is due to the Buddhists confusing the city of Pāvā, where Mahāvīra died, with the Pāvā, where Buddha stayed shortly before his end, thus concluding that he survived Mahāvīra¹. The latter's Pāvā is referred to as *majjhama*. This may indicate that for once (perhaps owing to illness) he dwelt in the city proper, and he may well have done so since his quarters were in the residence of a high official in Prince Hatthipāla's service. At any rate he died there in his 72nd year, forty-two years after he had become a monk. Acc. to modern belief Pāvā is the village of Pāvapurī in the district of Patna². Thus Mahāvīra's life passed within a narrow frame of space. All his days he, the aristocrat, had enjoyed the sympathy and the support of the nobles of the country. We have already mentioned his princely relations³, and in Viy 792b we read that the notables and the noble families of his time adhered to him and his teaching which they helped to spread. Now the collegial princes (*ganarāyāno*) of the Mallaki and Licchavi families gave a lamp-ceremony in commemoration of him. Mahāvīra's death or, rather, in terms of spiritual language, his entry into Nirvāna represents to the Jains the point from where their chronology starts. The Śvetāmbaras (§ 26) place it 470 years before the beginning of the Vikrama era (57-56 B.C.), the Digambaras (§ 26) 605 years before the Śaka era (78 A.D.), the latter being also erroneously taken for the Vikrama era⁴. By critically dealing with these statements which both lead back to 527-526 B.C., JACOBI⁵ (1879) calculated the year of 467 B.C., and CHARPENTIER⁶ tried to support this date by a new line of argument. In 1891

JACOBI¹ himself decided in favour of 477 or 476 basing his deductions SPAW 1930, 557 ff. on the year 477.

§20. As to Mahāvīra's success as a teacher Jinac. 134 provides us with monumental figures which we can leave as they are. The only point worth mentioning is that women are by far in the majority. The nuns were headed by Ajja-Candanā also referred to by Vīy. 458b where it tells us of Mahāvīra introducing his mother Devānandā to her. The monk very rightly mentioned as the first was Indabhūi, better known by his Gotra name as Goyama, though sporadically we hear of a "second" and a "third" Gautama, Aggibhūi and Vāubhūi². Since, acc. to Vīy. 153 a, they all appear simultaneously it is likely that Therāv. 1 by denoting all three as oldest, second and youngest monk of Mahāvīra was lead by a desire for classification. As one putting questions to his master Goyama as compared with a number of other persons is by far the most important, and as such he appears even where, as is the case in the Vīy., there is no longer any real dialogue thinkable or probable, but where question and answer have come to congeal into mere forms of style³. In Vīy. 755a, however, Goyama appears as a living person where we are told of his having wiped the floor with an antagonist and of his being commended for his ready wit by Mahāvīra who, acc. to Vīy. 646b, also informs him that they both had been friends already for a number of existences. These two passages are probably the only ones in the Canon reflecting something like the note of a personal feeling on Mahāvīra's side. For as well as always he remains impersonal, and even where he rejects contradicting—often rather foolish—teachings of other preachers (*annautthiya*), he does so by speaking in naked antithesis. It was probably in his nature to be non-committal and stern⁴. Though it were wrong to judge Mahāvīra merely by how he appears to us in the dialogues of the Canon. He would never

have been able to succeed without giving his words a touch of originality and power, and his oratorical gift is certain to have excelled the high measure customary in India by far. He is said to have spoken *Ardhamāgadhī*¹, that is to say Old AMg., an idiom prior to the language of our texts². Traces of the diction characteristic of him can clearly be demonstrated.³ In this connexion we have to mention the similes. We have a large quantity of them in the *Thān.*, esp. in *Thāna* 4, and we shall refer to them later in § 116. In them Mahāvīra renders proof of his extensive practical experience and of both his profound knowledge of the world and of human nature, and had they been handed down to us in an oratorical form, the Canon of the Jains would certainly not be inferior to that of the Buddhists aesthetically⁴.

§21. Even individual traits borrowed from nature have been incorporated into the total conception by Mahāvīra, the systematizer, as is shown by many passages of the *Vīy*. Thus his explanation for a hot spring he must have visited near Rāyagiha (§ 94), his theory of the wind (§ 110), and the life-community of fire and wind (§ 105). The fact that the movement of a flying object slows down (*Vīy* 176 b, *Jiv.* 374b) was probably concluded by Mahāvīra from the effect of gravitation. Nor should we omit the wind *lavvadaḡa* (*Vīy.* 499b) arising between the heart and the liver and causing within a galoping horse the sound of *khu khu*. Above all, however, the most versatile thinker we know of in ancient India had a liking for figures and arithmetic, that characterizes his speeches most extraordinarily. In most cases we are not able to prove which considerations are his own and which are of others, but he calls himself the author of a theory of the 7 possible lines (*evaṃ khalu, Goyama, mae satta sedhāṇa pannattāṇa*, *Vīy.* 954b). Acc. to *Vīy* 866b such a line is either

straight (*ujjuy'-āyaya*), has 1 break (*egao-vaṃka*), 2 breaks (*duhao-v.*), forms an open rectangle on one side (*egao-khaha*), forms a rectangular Z (*duhao-kh.*)¹, is circular (*cakkavāla*) or semicircular (*addha-c*). As a general principle there is neither a beginning nor an end to a line, whereas either is the case within the world since the world is finite. In the infinite non-world (§ 103) this applies to the tangential straight lines that touches a border plane² of the world. A line leading from the non-world and meeting with the world border has no beginning, a line leading from the latter into the non-world is without an end, and a line leading all around the world in one way or other has neither beginning nor end (Viy 866a with comm.). As to geometrical forms (*saṃthāna*)³—to add them in this connexion—Viy. 860a refers to orbicular (*vatta*), triangular, rectangular, elongated ones (*āyaya*), and to the ring (*parimaṇḍala*)⁴, and in them the atoms are arranged either two-or three-dimensionally (in *payara* or *ghana*), in the elongated form also one-dimensionally (in *sedhī*). In referring to them the minimum and maximum numbers of the atoms and space units are being discussed, and this leads us up to the calculative reflections. In them a certain family likeness seems to become apparent, and where it goes together with a special liking for applying it we are probably confronted with an original idea of Mahāvīra's. The frequency of their occurrence alone is not decisive, or else it would be he, too, who had come to find the root of 10 and to apply it in the sense of the figure of π ⁵. But this certainly asked for a wider knowledge of mathematics than Mahāvīra had, if we are

1 Since these determination are intended to describe the movements of atoms, aggregates, and souls we should rather speak of "path" instead of "line". But the following principal reflection, especially since it comprises the non-world, makes it necessary to use the latter word

2 *kṣullaka-pratara* (Vy 867a)

3 Opposite to these ideal forms a 6th forms is called "faulty" (*arīthaṃtha*) (Thān 389 a)

4 Another sequence contains the first three of the above mentioned between the long and the short one (*dīha* and *rahassa*) on the one hand and between the wide (*phula*) and the circular one on the other hand (Thān 389a).

5 LEUMANN, Aup p 165 For a proof among many others see Jambudd 15a. In discussing the figure of π with the Hindus JPAsB N S p 22 (1926) 25-42, Bibh DATTA does not mention the Jains

allowed to judge by the favourite ideas he presumably cherished. Nor is the astronomy of the Jains, as, above all, it is offered to us by the Sūrapannatti, a creation of his own, but it rather reflects the thinking of generations. This becomes equally clear by the usage of “we” instead of “I” and by the absence of polemics¹. As to the aspect of the world, however, it bears Mahāvīra’s stamping by his doubling the widths of geographical units, a geometrical line with the quotient 2 (§ 122). This, perhaps, accounts for the contention that there are two suns and moons over Jambuddīva, which then leads up to the doubling of further stars (§ 128). The arithmetical line is applied in Mahāvīra’s teaching to the sums. Of a sum (*jumma* or *rāsī* or *rāsī-jumma*)² continuously diminished by 4 there remains 4 (or 0), 3, 2 or 1, and it is called accordingly by the terms used at dice-playing *kada-jumma*, *teoya*, *dāvāra* or *kali-oya* (Viy. 744b)³, and even *khuddāga* may be placed at the head of these names of *khudda-jumma* (Viy. 948b). They are called small “sums” as against the “large” ones, *mahā-j*. (Viy. 964b). They are sums expressing by their name not only the final remainder but also the number of the factors, the latter always preceding in the bipartite names of *kaḍa-jumma-kaḍajumma*, *k.-teoya*, etc.⁴. These calculations—to be found in the last passages of the Viy—are applied in the most different connexions⁵, though even Abhayadeva

1 We here give the different kinds of arithmetics as known from Thāṇ 263a, 496a *parikamma*, the elements, and *vavahāra*, the application, are followed by *rajjū*, geometry, and *rāsī*, addition, *kalā-savanna*, fractions, *jāvaṃ-tāṭā*, multiplication, and *vagga*, *ghaṇa*, *vagga-vagga*, involution to the square, the cube and the fourth power. Comp. also Bibhutibhushan DATTA, Origin and History of the Hindu Names for Geometry. Quellen u. Studien z. Gesch. d. Math. 1, 113-119. The SAME, The Jaina School of Mathematics, Bull. of the Calcutta Mathematical Soc. 21, 115-145, D. M. ROY, The Culture of Mathematics among the Jains of S. India in the Ninth Century in ABHORI 8.

2 Even the totality of things characterized by either the presence or absence of soul (*jīva*) is called *rāsī* (Samav. 7b. 133a).

3 Thus *jumma* denotes the even and *oya* the odd sums (Viy. 860a; Vy. 745b).

4 Examples: 16 is *kada-jumma* (i.e. the lowest possible), since it is divisible by 4 with 0 remaining. The division is done 4 times, and 4 is in itself *kada-j*. Accordingly 16 is called *kaḍajumma-kaḍajumma*. 19 is *teoya* (i.e. the lowest possible), since it is divisible by 4 with 3 remaining. The division is done as above. Hence 19 is called *kaḍajumma-teoya*—6 is *dāvāra*, since it is divisible by 4 with 2 remaining. The division is done once, and 1 is *kali-oya*. Hence 6 is called *kali-oya-dāvāra*.

5. Comp. also Thāṇ. 237 a.

fails to know what to do with the latter¹. Other speculations related to permutations² are arrived at by crossing different lines of conceptions. Thus, for instance, it is being examined how many beings occupying one and the same hell exercise one of the 4 main passions, i.e. anger, pride, fraud, and greed (§ 167) (Viy. 68b), with the result that each of these four passions occurs with all beings, with all minus 1, with several ones and with a single one. Or, it is being demonstrated in which way 1-10 hell-beings (§ 109) divide among the 7 regions (Viy. 439b ff.). In order to give a characteristic example of the calculatory intelligence we here refer to the statements made on the maximum and minimum (*jahannenam* and *ukkosenam*) of most of the figures of the system, to the qualification of being both the first and not the first, both the last and not the last of one's like (*padhama* and *apadhama*, *carima* and *acarima*) (Viy 731b), to which the Carama-paya Pannav. 10 goes back, to the discrimination made between the beginning and the continuation of a certain condition (a.o. *anantara-siddha* and *paramparas.*, Viy. 877a, also *-neraiya* Thān. 513b), and finally to the teaching of the relative number (T. 1, 8. *alpa-bahutva*). It answers the question of *kayarā kayarehūnto appā vā bahugā vā tullā vā visesāhiyā vā*? Such statements (in the Viy. first 235b) are comprised in Pannav. 3, the Bahuvattavvaya-paya. An object exists in proportionally a smallest number (*savva-tthovā*), others in either undecidedly, uncountably, or infinitely as many numbers (*samkhejja-gunā*, *asamkhejja-gunā*, *anantagunā*). The terms mentioned here—and to be represented in this book by the figures of x , ι , ∞ —are very frequent. In this connexion *ananta* specifically means nothing else but any other high figure. It is applied in a similarly naive way as is the idea of time, which, at least within the cosmography, means a quality among others, and which, as such a one, may be either attributed or denied to a region (§ 128).

§22. As to Indabhūi's life nothing authentic is known,

1. *etac c'avam ājnā-prāmānyād āvagantavyam* Vy 745b.

2. Permutations dating from later times are dealt with by LEUMANN, Übersicht p 41 b

and the same applies to the two other Goyamas (s. a.). All three appear with eight more as the eleven "group-leaders" (*ganahara*) of Mahāvīra's, since, however, two times two of them share in leading a *gana*, we have but nine "groups" (Ṭhān. 451b) each comprising 300, 450 or 500 monks. For these statements as well as for the following the Therāvalī annexed to the Jinacariya is responsible (§ 1.2). It adds that merely Indabhūi and Suhamma (to whom we shall refer presently) survived Mahāvīra. Thus also Jinac. 127 says the same of Indabhūi who when his master had passed away cut the bond of attachment towards him, since for love there is no room in true monkhood. There can be scarcely any doubt that the other nine Ganaharas are fictitious for the purpose of dividing the followers of Mahāvīra and even the case first occurring in the 6th generation, acc to which a *gana* had two leaders, is already claimed for the origins¹. The Mandiyaputta mentioned by Viy. 181a ff also helped to establish that fiction. Sudharman (Suhamma) was teacher of Jambū and is considered to be the originator of canonical texts as far as they are introduced passage-wise by the question of the latter for their contents. Hence they are supposed to render the wording Suhamma is said to have had from Mahāvīra personally. Acc to Therāv. 2 it was also Indabhūi and Suhamma who, after Mahāvīra's death, came to obtain the power of omniscience and acc. to the tradition rendered in Hc. Par. 4 also Jambū². Suhamma is said to have died 20 years, and Jambū 64 years after Mahāvīra, they were the last of the Kevalins, and thus the canonic text left by them is considered to be above any objection. All successive teachers up to Sthūlabhadra incl. are called *śruta-kevalin*. Jambū's grandson-pupil by the way of *Prabhava* is said to have been Śāyyambhava³ (*Sejjambhava*), who is considered to be the author of the Dasaveyāliya.

1. The 11 Ganaharas are dealt with by Āv. 591-665

2. Since *jambū* is fem., as a proper name it will be an abbreviation such as other names may be supposed to be. Hemacandra in the Par. avoids all cases other than the nom.

3. This is considered to be the Sanskrit form, though probably it goes back to Svāyambhuva.

§23. The most easily accessible source for the remotest history of the Jain Church is Hemacandra's *Pañīṣṭaparvan* laid down between samvat 1216 and 1229¹. But Hemacandra naturally goes back to older sources comprising not only such in the *Āvassaya* literature and in other comments on the Canon, but also in the *Vasudevahindī*² (6th century A.D. at the latest). Here already we find the sequence of the lords spiritual being linked with that of the lords temporal. Thus it is said to have happened 60 years after Mahāvīra's death that the son of his protector named Kūṇiya or Ajātasatru, King Udāyin of Magādhā, was murdered and followed by Nanda becoming the head of a new line (since 9 of this name are known) (Par. 6, 243), We do not come across any date before Nanda's fall (155 after Mv., Par. 8, 339) caused by Cānakya in favour of Candragupta. C.'s son, Bindusāra, as well as his grandson, Aśoka, and the latter's son, Kunāla, and grandson, Samprati, appear within the frame of the Par., which mixes the anecdotal and the historical in the well-known way. The history of the Jain Church goes as far as to *Vajra Svāmīn* to whom Āv. 764-773 refer in all sorts of things, as it does to his successor, *Ārya Rakṣita*.

Śayyambhava, by the way of *Naśobhadra* and next to *Sambhūtavejaya* (s b), is followed by *Bhadrabāhu*. Belonging to the 6th generation since Mv. or Goyama, resp., he lived in the 2nd century after them at the latest, i.e., in the 3rd century B.C. He died 170 (thus Par. 9, 113) or 162 years (thus the Dig. tradition) after Mahāvīra. In the *Therāv.* we have apart from the "shorter" list of names a more "comprehensive" one³ which by starting from Bhadrabāhu lists the male and female disciples of every Ganahara, the *gana* founded by them. their *sāhā* (*śākhā*), and (from Suhastin onward) also their *kula*. It may well be assumed that this list, on the whole, can be relied upon, since in locally confined regions it is confirmed by inscriptions, as first

1 BÜHLER, *Leben Hc* 's p. 43

2 Comp. the proof furnished by JACOBI, *Sthav* (2nd ed.) p. v ff

3 For their relation to each other and other lists of teachers in the Nandī and the *Āvassayanijjuttī* see JACOBI loc. cit. S. XIII ff. One of the results is (XVIII) that only a few of the *thera* that have actually existed have survived by name

was shown by BÜHLER¹. These inscriptions come from the district of Mathurā, and as far as they² are dated they start with the 4th year of the Kaniska era=132-133 A.D.³; these oldest Śvetāmbara evidences thus outdate that literary tradition by years and, moreover, improve them⁴. It now speaks for Bh's importance that the more comprehensive list starts with him, for thus we are given evidence of the part he acted in spreading the religious belief (as will be mentioned below § 26). He also deserved well of preserving the doctrine. Acc. to Par. 9, 55 ff⁵ a food crisis lasting in the country for twelve years forced the monks to emigrate "to the coast" for some time, and it was due to these circumstances that the exact preservation and encouragement of the Jīna teaching was interrupted. Here Bh. proves an expert of the sacred texts to a degree never reached again, for he is said to have been the last to know not only the 11 Anga but also the 12th, the Dīttvivāya, containing the remains of 14 so-called Puvva or Pūrva (§ 37). When now a synod collecting the endangered texts met in Pātaliputra and sent for Bh. for the Dīttvivāya, since he was on the way to Nepal, the attendants whom he was willing to instruct on the spot were able to comprehend but details of those 14 Pūrvas, with the only exception of Sthūlabhadra who brought with him 10 of them by memory. For Bh. as the supposed author of comments see § 43. Owing to his long, though not definite absence from the centre of the community it was not Bh. who was its formal head but his fellow-pupil with Yaśobhadra named *Sambhūlavijaya* who was followed by the above mentioned *Sthūlabhadra* as a leader, so that the latter was the pupil of either. His relations to Bh., however,

were not undisturbed¹, and disturbances of this sort recurred even more intensively between Sth.'s two pupils, Mahāgiri and *Suhastin*, after the latter had taken the lead of the order. As mentioned above, *Suhastin* is notable in that the Therav., from him onward, lists also *kula* as parts of the *gana*, and, moreover, in that he is said to have won the King *Samprati*, grandson of and successor to Aśoka, for Jainism (Par. 11, 55 ff.).

§24. The oldest region known to have been frequented by itinerant monks and nuns and handed down to us in Kappa 1, 51 comprises Anga-Magadha to the east, Kauśāmbī to the south, Sthūnā to the west, and Kunālā to the north. The sentence succeeding 1, 52 speaks of allowing communication in regions where the teaching had been successful in gaining a footing, and it is therefore considered as a supplementary addendum which is said to go back to *Samprati*'s times². Thus Hemacandra, too, reports that *Samprati* devoted himself to Jain mission work among the Andhra and Dramila in South India, i.e. in the Telugu and Tamil countries, which both are said to have been subject to his command (Par 11, 89 ff). Since *Samprati* is said to have resided in Ujjayinī we might see in this city an early western colony of Jainism, and even so if *Suhastin* had resided there only temporarily as is reported by Par. 11, 23; 66. Acc. to the same passage, provided that we acknowledge the reports in question to contain a grain of historical truth, the Jains played a rôle even in the 1st century B. C. when then ecclesiastic Kālaka took revenge on Gardhabhilla, the prince of that place, for having seduced his sister, and called the sovereign (*sāhānusāhi*) of the Śaka to take over the country³. We

may add that Vikrama, the successor to Gardhabhilla, is said to have been won for Jainism by Siddhasena Divākara¹. Yet this report contains as little tangible data as do such statements of the same contents that were made with regard to other distinguished personalities and which in this connexion may be omitted as negligible. There are even doubts as to the question whether Vikrama's political importance was as great as the Jains wish it to be².

With Samprati we find ourselves somewhere near the turn of the 3rd to the 2nd century B C., and somewhere near this time there lived the King Khāiavela of Kalinga (Orissa) provided that, on account of his great inscription at Khandagiri (Hāthīgumphā), the years between 182 and 180 B.C. allow of dating his accession to the throne³. This much mutilated inscription⁴, it is true, begins with a Jinist formula of veneration, but what tangible deeds in favour of the Jains scholars were inclined to interpret from it have turned out to be untenable or remained inexplicable. We may presuppose that Jain communities flourished within Kh.'s realm. They stand side by side with those that existed in Tāmraliptī (Tamluk, Midnapur Distr, Bengal), Kotivarsa (Bāngarh, Dinājpur Distr., Bengal) and Pundravardhana (North Bengal), and which went back to a pupil of Bhadrabāhu's (Therav. 5)⁵.

§25 In contrast to the unconfirmed report of Samprati and Suhastin the spreading to the west becomes evident for the 2nd century B C. and the following owing to the finds made at the ancient town of Mathurā,⁶ which are most revealing also in

factual respects¹. From the inscriptions we learn, as mentioned before in confirming the texts, of *śākhā* and *kula* as subdivisions of the *gana*, though the mutual relation of the two first is not altogether clear,² and added to this there is the *sambhoga* illustrated by the literary document of Vav. 5, 19f. and 7, 1-3. It goes without saying that there were preachers (*vācaka*), but this does not necessarily involve the existence of an established ritual text³. The Tīthagaras were distinguished from each other by their symbols (§ 14) since we know that for Ara there stands a name formed after his attribute of Nandyāvarta (*arahato Nāndīāvartasa pratimā*). The stūpa to which the erect figure of this Arhat belonged, was supposed to have been the work of the gods (or either of one of them) (*deva-nirmata*) suggesting that it had been standing since times immemorial when the inscribed monument was erected in the 49th year of the Kaniska era, i.e. in 177-178 A.D. It furthermore suggests that the Jains had erected stūpas since long, as also the Canon refers to them (*thūbha*)⁴.

It may be noted here that also the effigies of the Jinas (*jina-paḍimā*) are spoken of in the Canon Nāyādh. 210b, Rāyap. 87b, 94a, etc. In the course of its most detailed description of a godly residence⁵ Rāyap. refers to 4 sitting Jina figures (Usabha, Vaddhamāna, Candānana, Vārisena⁶) of natural size surrounding a stūpa towards which they turn their faces, adding that a special building (*siddh' āyayana*) contains 108 *j-paḍimā*. Their cult on the part of the god equals that of to-day consisting in the attendance of the figures by uttering devotional formulae. In the large hall (*sabhā*), however, there are spherical boxes (*golavatta-samugga*) containing the sacred remains (*j.-sakahā*, comp. § 15) and hanging on hooks (*nāgadanta*) by means of cords (*sikkaga*). The whole description most certainly follows earthly

6. The two last ones are the counterparts of the two first ones in the continent of Erāvaya (§ 119)

examples The room enclosing the figures mentioned in Nāyādh. is called the *jina-ghara*. Anuog. 158d; Paṇhāv. 123a do mention the *deula* '*devakula*' next to the *thūbha* and profane establishments (Comp. also Jambudd. 207a)¹.

§26. The discoveries made at Mathura seem to prove by the nakedness of the sculptured figures² that the schism of the Order into Śvetāmbara and Digambara dates from as early as the 2nd century A.D. Mahāvīra had put up with clothing, and it was generally considered worthy to follow his example. He who in the one or the other formality took his conduct as a model for his own was in the state of *jina-kappa*³, ordinary monks followed the *thera-kappa*⁴. The question of clothing was treated liberally, and there is reason to assume that especially those monks adhering to Pāsa's teaching kept their clothing⁵. Hence it follows that even in the early days of antiquity there was a duplicity existing which we may call the germ of the later schism of the Order into the "Naked" (*digambara*, *āśūmbara*, *dig-rāsas*) and the "Whites" (*śvetāmbara*, *śveta-pāsa*, *sūāmbara*, etc.). The Śvetāmbaras report (Āv. nijj. 418a) on the heresy committed by Bodiya Sivabhūi in the year 609 after Mv, who wanted the *jina-kappa* to be made generally acknowledged and who himself accepted it notwithstanding the warnings of his guru. Originally, however, this has nothing to do with the Digambaras⁶ and was related to them only later. The year given by the Dig. is 136 Vikrama=79 A.D.⁷, and it is at this time that the Śvetāmbaras

³ Comp. Devendra ZDMG 38, 6

⁴ There is a parallel to this in that the texts of the Canon are said to be partly the words of the Jina disciple Sudharman and partly those of the *thera*, either being equally obliging for the community. The translation of *thera-kappa-tīhī* K. 6, 14 must be altered corr. to the above

⁶ Differently BHANDARKAR Rep. 1883-84, Notes p. III

⁷ The same year is reported (Dams. 11ff) by the Dig. Devasena (S. 909) for the separation of the Sevaḍa Sangha, i.e. the Śvetāmbara, from the Dig., owing to the heresy of Jinacandra who in teaching it slew his teacher Śānti, a pupil of Bhadrabāhu (Devasena in the Bhāvasaṃgaha, comp. Dams. p. 55 ff). It is said to have taken place at Valahī where the monks had emigrated

are said to have developed from the Ārdhapālika or Ārdhaphālaka who are called "partly clothed partly unclothed" by the Dig. Ratnanandin in the Bhadrabāhucarita (4, 50). This expression fails to be clear. Both reports on the origin of either¹ when viewed under the aspect of JACOBI's critical study make us see that their authors could not remember any actual dissension having taken place and hence invented one instead, in which case, as we observe, the Dig. go so far as to state a gradual alienation. This turns out to be true, and certainly so not only in regard of historical time but of regional space as well. Isolated groups of the Jain Order were eager to be most faithful in living up to the monastic ideal, and the result was that, when again coming into touch with the original community standing in the current of development, they made themselves conspicuous as renegades or, resp., considered themselves orthodox the way the Dig. are known to do.

A self-isolation of this kind found its expression in the accounts of an emigration from Bihar. In the Par. there are two passages (8, 193; 377) that refer to a twelve years, famine falling in the years of Sthūlabhadra and Susthita and forcing the latter to send away his gana, though where it was directed to we are not told. Once before already we heard of an equal crisis in the times of Bhadrabāhu and, to be careful, of its possible effects (§ 23). The tradition of the Śvet. (Ther. 5) does not trace its spiritual descendants beyond his pupils, and it is but from one of them, called Godāsa, that it derives 4 *sāhās* to locate them in Tāmraliptī, Kotivarsa, Pundravardhana and Dāsikharbaṭa, and at least by the first and the third name it becomes clear that they point to the east and south-east. In this the tradition of the Digambaras

from Ujjayinī owing to the 12 years' famine predicted by Bhadrabāhu. Devasena thought of the Synod of Valabhī (§ 39) in which he was mistaken, the more so since Bhāv. 70 he refers to the then written śāstra. He is equally confusing where he deals with subjects lying beyond the Dig. sphere. Thus Dams. 20 Makkhalī Gosāla is reflected as Makkadī-Pūrana, the pupil of a Ganin of the Pāsa-saṃgha, since he had heard something about Pūrana Kassapa (the same Srutaśāgara, Chappāhuḍa 5, 89; Maskari-Pūrana).

1 A counterpart to the former is the statement derived from an anonym Dig. source rendered in Jineśvara's Pramālakṣaṇa with ref. to v. 404, acc. to which the Śvet. made their appearance in 609 after Mahāvīra at Valabhī (comp. Dams p. 61f.).

differs. Thanks to an inscription at Śravana Belgolā dedicated to the memory of an ācārya Prabhācandra and first reported by RICE¹ we know that Bh had predicted a famine lasting for twelve years and, what is more, to occur in Ujjayinī, where upon the whole saṃgha moved to the south where it reached a flourished country. The Bhadrabāhu-Kathā (about 800) and the Bṛhat-kathākośa (931) report that toward the end of his life Bh. ordered his followers to move away to Punnāta (South-Mysore), whereas Ratnanandin's Bh-carita (2nd half of the 16th cent.) says that he himself took the lead and died on the way.² Bh.'s death is being linked with that of the Candragupta or -gupta whom even other inscriptions delivered by RICE report to have been Bh.'s pupil. C. who had resigned the throne to follow Bh put an end to his life by fasting as is said at the same place as Bh did, i.e. at Śravana Belgolā.³ As to Candragupta the Śvet. report partly more partly less. Acc. to Par. 8, 433; 445 he saw in the monks his gurus and he died the *samādhi-marara*, Cānakya, his minister, who himself was the son of a Jain layman, equally sympathized with the monks. This we know from the Āvassaya tradition⁴. The Viyāhacūliyā describes a prophesy made by Bhadrabāhu at Pādālipura on account of 16 dreams of the queen⁵. Among other symptoms of decline in religion and morals they mean a twelve years' *dukkāla*, the *dhamma*'s changing over to the Vaiśyas,

1 RICE IA 3, 153-158, the SAME, Mysore Inscriptions transl., Bangalore 1879, p. LXXXVI-VIII, the SAME Inscr. at Śravana B. (= Epigraphia Carnatica II, 1889, p. 1, new ed. of this vol. by NARASIMHACHAR (1923), Epigr. Indica (ed. FLEET) 4, 27. Improvements by FLEET made as early as in IA 21, 158, also LEUMANN WZKM 7, 383.

2 For the first and third source see LEUMANN, Übersicht, p. 24; for the second comp. RICE (on the ground of an information given by PATHAK) Ep. Carn. III-IV, p. 2, p. 1. RICE loc. cit. (1889) also draws upon the Rājāvalikathe of the Devacandra (19th cent.). For a synopsis of the tradition see NARASIMHACHAR loc. cit. p. 36ff. If the last named Prabhācandra who was a pupil of the Akalanka living in the 2nd half of the 8th cent., was the same as the one mentioned in the memorial inscription, then in spite of the strong opinion held by FLEET the latter must be later than the 1st of the 8th cent.

3 V. A. SMITH Oxford History of India, p. 75, NARASIMHACHAR Ep. Carn. 2 (rev. ed.)

5 The Dig. equally have it, comp. the Rājāvalikathe with RICE IA 3, 155

the sermon¹ of the *jina-magga* in the south, a rise of the middle classes and insurgent activities of princes—altogether gloomy prospects for the future that caused Candragupta to resign in favour of his son. As to the manner of his death nothing is being said. Hence in the times of the Viyāhacūliyā it was also the Śvet. that linked Bhadrabāhu's name with the migration to the south leading to the schism of the Order. Provided we take Candragupta's piety strictly it does not harmonize with an allusion of Vimala's Paumacariya (89, 42) disclosed by JACOBI² which in consequence of political troubles and religious apostasy speaks in retrospective prophesy of a decline of Jainism in the "time succeeding the Nanda." In opposition to the Dig passages of Bhadrabāhu it was FLEET who contended³ that it concerned a second bearer of his name who acc. to an ancient list of the Dig.⁴ came to be the head of the Order in 492 after Mv, and that instead of Candragupta we have to think of Guptigupta or Arhadbali as being the pupil and later follower of "Bhadrabāhu II.". LEUMANN, however, points out⁵ that in this list already existing in the 8th century, "the second Bh. is but a chronistic repetition" and that "apart from the above Dig. dating nothing of him is known that were not assigned to him from the older." The migration itself seems to be historical, nor does FLEET argue against it. For a religion in process of spreading necessarily flows from the country of its origin over into regions capable of absorption⁶, no matter whether it be by some forced impulse or not.

§27. For the inscriptions of Mathura the above mentioned list of LÜDERS (1912) prevails; the bibliography of the later will

1 It is significant of the Śvet text that it speaks of a sermon (*panna-vissanti*) only and not of a flourishing status

6 Acc to a conjecture made by DESAI (Jainism in S India p 2 ff) there were Jain communities in South Canara even before Bhadrabāhu's arrival, a fact that made it easier for him to choose that country

be found together with a summary of the spiritual and temporal genealogies in GUÉRINOT's *Répertoire d'épigraphie jaina* (1906). Partial collections containing the text are for the Śvet. the Prācīn Jain Lekh Samgrah, Bh. 1.2 (the latter KJIM 6, 1921) compiled by JINAVIJAYA acc. to the places of discovery and the Jain Lekh Samgrah (also under the title of *Jaina Inscriptions*) by Puran Chand NAHAR, Bh. 1-3, the latter with the inscriptions of Jaisalmer (C. 1918-29), for the Dig. Hirālāl JAINS *Jainaśilālekhāsamgraha*, whose 1st vol. (MDJGM 28, 1928) offers the inscriptions of Śravana Belgola already collected by RICE (*Inscriptions at Sr. B*, Bangalore 1889, 2nd. ed. by NARASIMHACHAR 1923) The fact that in the 12 vols. of RICE'S *Epigraphia Carnatica* (1886-1904) comprising the last-mentioned as vol. 2, chiefly Jain inscriptions are being rendered and evaluated, is explained by the course of history. For it is South India and predominantly Mysore that became the domain of the Digambaras. It was in these parts of the sub-continent, as is proven by the inscriptions, that for centuries they flourished and exercised their influence. Their tradition is based on the migration of Bhadrabāhu's monks to the south¹, but it is very much later that we find South Indian communities supported by inscriptions, i.e. towards the end of the 5th century by the copper plates of Halsi in Belgaum going back to a Kadamba prince² and of Śaka 556-634 in Aihole, Kaledgi Distr. in Bijāpur.³ The two Ganga documents of Nonamangala placed by RICE at about 370 and 425, resp., are possibly older⁴. The former would be the earliest Jain inscription existing after Mathurā though separated from it by centuries. Among the genuine documents⁵ of nearly the same age we have Udayagiri (South Gwalior) by

1 Mahāvamsa 10, 97-99 goes still much farther beyond this date. Acc. to this Pali work in Anuradhapura under the reign of the second predecessor of Tissa in the 4th cent. B. C. there lived also *niganthas* apart from other heretics (*pāsandika*)

Gupta 106=425¹; Mathurā by G. 113=423-3² and Kahāum (in an eastern tip of the Uttar Pradesh to the north of the Ganges) by G. 141=460-1³; they, too, belong to the Dīgambaras. Though any day there may be discoveries being made bridging to a certain degree the historical gaps, yet the inscriptions will always prove the small outward effect of the Jain Order during the early centuries of our Christian era. For the Śvet. JACOBI assumes "a comparative obscurity as an exclusive sect" lasting up to the 7th century and supposes that in Haribhadra's time (8th century) they had not yet come to the south beyond the Tapti⁴. It is, moreover, worth mentioning that in the classical drama there appears no Śvet. Jaina⁵.

§28. As a rule the inscriptions contain as a subject the donation of statues, building-ground, building-money or tax-returns to the Jaina community by laymen and princely patrons, in the former case of either sex and (in Mathurā) frequently at the suggestion of a specified member of the Order intimately connected with the donor. It is not so much the facts that are interesting to us as the genealogical and chronistic statements accompanying the reports. They considerably add to our knowledge concerning the history of both the dynasties and the Order. Individually as well as in their subsequent members quite a number of princely houses, a o. the Ganga, Rāstrakūta, Cālukya, Hoysala have proved friendly to the Jains. And yet, taking into account the well-known versatility of Indian princes in religious affairs, we must be careful not to overrate the rôle acted by Jainism in political life, and it is rather bold to speak of "adeptes du jainisme" in this connexion. It may be assumed that more often than not it was for reasons of prudence that it was thought necessary to suit the Order so influential owing to its wealthy laymen, whereas true conviction may be taken for

granted wherever the populace was struck hard by serious ahimsā-commandments, in other words, wherever its displeasure was not dreaded, and where, acc. to Jain rites, death through fasting was believed to crown one's life. For these rites some pieces of evidence are given by inscriptions¹. As in Candragupta and Cānakya (s.a.), so the Jains see great supporters of their religion also in Vikrama, Śālivāhana, Munja, Bhoja and others. Up to now, however, their respective reports lack authentication by monumental or non-Jainist literary documents. Recently, Toramāna, the prince of the Hūna who invaded India about 500), and different members of the house of Gupta have been added to the above-mentioned list². For, acc. to the introductory verse of the Kuvalayamālākathā composed by Uddyotana Sūri in Śaka 700 (=778), Torarāya (as here he is called) had as a guru the ācārya Harigupta from the Guptavamśa, a pupil of his was the poet (*kavi*) Devagupta. If these harmless reports prove true it may be said that the Jains had exercised at least a certain influence upon Toramāna, though this influence did not extend to his son Mihiragula or -kula after he had ascended the throne, since it was Mihiragula who by his cruelty testified to him by Brahmans and Buddhists had also been hard on the Jains. We are indebted to PATHAK for having offered proof that he is identical with Kalkin (*Kalkī*), the Indian Antichrist³.

For the Śvet. the case of the Kumārapāla of Gujarat (s. 1200-1229) represents a show-piece of how a prince was won for their Order. We are informed of this case in all details since BÜHLER has rendered a masterly biographical representation of the originator of the conversion, the scholar Hema-

candra, by separating the historical from the legendary¹. According to that there is no doubt that starting from s. 1216 Kumārapāla “tried to make Gujarat in some manner a Jain model state” and forced his subjects to go far in putting into practice the *ahimsā*, etc , acc to his example. At the same time Hemacandra by his versatile scientific work established the basis for a typical Jain culture². But even Kumārapāla did not leave off favouring the Śaivas with whom up to then he had been intimately connected, so that after his death they again won the upperhand. Finally there is the belief in being able to call the Emperor Akbar a Śvetāmbara Jain. He requested them to send him Hīravijaya (1526,7-1595), an Ācārya from the Tapā-Gaccha (§ 34). He, the so-called *jagad-guru* spent some years at the court of Delhi. After his departure in 1584 Śānticandra, Bhānucandra and Vijayasena were successively active in the same direction of making Akbar familiar with the Dharma. As is known Akbar was not converted (*prabodhita*), but similarly to Aśoka under Buddhist, so he under Jain influence edited some regionally and temporarily limited prohibitions in accordance with their teaching³.

§29. The successes previously mentioned mostly go back to the outward reputation of the Jain Order, which again goes back to the number and the importance of its adherents, whereas its publicity explains itself by the substance of the doctrine. Since about 80 A.D ⁴ when a pseudo-Bhadrabāhu (§ 43) first came to put the traditional text comment into shape, the Śvet., for centuries, have tried hard for this substance, although, as was said, mostly in the pale of the community. It is true, the investigations into the details of this intellectual accomplishment started by LEUMANN remained stuck in their first stages in public (§ 4), but yet they allow us to realize the comprehensive

character of that scholasticism. The names of those that stand behind it we do not know¹, and presumably we shall never do; and it is not until we come to the ending stages in Prakrit that we have several names, see Chapter III. A wide circulation of the Śvetāmbara texts had become possible by the redaction of the Canon under the direction of Devarddhi (980 or 993 after Mahāvīra). Owing to the schism of the Order the Dīg had since long become estranged from the Canon, and there were only very few passages of some texts which partly in a shape prior to its definite fixation continued to live in their memory². Hence they first appear with the so-called *prakarana*, and, what is more, they represent the first authors of this kind of literature with the Jains³. By *prakaranas* we understand systematic treatises⁴, i.e. treatises following a fixed plan and leading the subject instead of being led by it as is the case with works that start from something given. With its beginnings the *prakarana* period reaches back as far as the period of comments. Among the Śvet. it opens with Umāsvāti, Siddhasena Divākara and Haribhadra (750 A.D.), among the Dīg. with Vattakera and Kundakunda⁵ who both wrote Prakrit and preceded Umāsvāti⁶ who wrote his *prakarana* in Sanskrit. With this we do not intend to establish a historical criterion, for in the literature of comments the change over to Sanskrit was first started by the above mentioned

1. On account of a passage in the Āvaśyaka tradition LEUMANN gives Siddhasena *khamā-samaṇa* (Divākara) as the author of the oldest interpolations in pseudo-Bhadrabāhu's Nijjuttis', the so-called *mūla-bhāṣya*. For S Divākara and S Ganin between whom we have Haribhadra comp JACOBI, Samarāicc p III

2. (The Dīg redaction of the Āvaśyaka) "is the only remainder of the Canon worth mentioning among the Digambaras, of the Daśavaikālīka they have retained in their memory but some Ślokas (I 1 IV 7 f VI 54 56 65 VIII 17a)!" (Footnote) "Aparājita still quotes (on Ārādhana 415 and 601) different passages from Ācārāṅga, Sūtrakṛta (II, 1, 58), Nisītha, Uttarādhy (II 6a 7 12b 34 XXIII 12b-14) and Daśavaikālīka. Some of these passages run quite differently in the traditional Canon, and some of them it lacks completely", LEUMANN, Uebersicht p 3

Haribhadra who was a Brahman by birth and probably also for this reason frequently proved considerably impartial in his treatises¹, and accomplished by Śīlānka (872 A.D.), and Prakrit treatises have long continued to be written. But the use of Sanskrit coming in was significant. By editing his Tattvārthādhigama in the shape of Sūtras (imitated by Haribhadra in his Dharma-bindu) Umāsvāti followed Brahman models, and by doing so he led the Śvet. out of the narrow circle and made them become competitive. Umāsvāti also appears in the lists of the Dig.; but there is no doubt that he was a Śvet., since the Dig. do not acknowledge the Bhāṣya he himself wrote for his Sūtras, but use their own comments instead. They have changed the basic text², too, if only inconsiderably. Among the authors following Umāsvāti the above mentioned competitiveness led to arguments and disputes of remarkable dialectic refinement with both Buddhists and Brahmans³. On the part of the Śvet. we have to mention Siddhasena Divākara and Haribhadra as contestants to Dharmakīrti (about 650)⁴, while among the Dig. we have Samantabhadra (1st half of the 8th century), Akalanka (2nd half of the 8th century), Vidyānanda (Pātrakesarīn) and Prabhācandra (1st half of the 9th century) as opponents to Kumārila and Śāntaraksita. Vidyānanda also stood up against Śamkara. After the unanimously testified decline of Buddhism in South India it was in the personality of Kumārila that "the Mīmāṃsā flourished for a short while. It was followed (thanks to the Dig.) by a Jain reaction culminating during the reign

of the Rāstrakūta Amoghavarṣa I. (815-877)"¹. In the end, however, Hinduism triumphed. By the Canarese literature we are able to trace how Jainism loses ground to the Śaivas and the Vaiṣnavas. That this did not happen until the 2nd half of the 12th century easily explains itself by the solid tradition flowing from Śravaṇa Belgola. In the region where the Tamil language was spoken the change over in favour of Viṣṇuism and Śivaism was in full swing not until the end of the 10th century after both had come to rise here already some centuries earlier. Soon after the middle of the 12th century the Viraśaiva who had increased in importance owing to the propaganda of the Basava, joined the enemies of Jainism. The contest between the different religions soon took the form of bloody persecutions², such as the Jains in northern India, i.e. presumably mainly Śvet., had to endure by the hands of Mohammedan conquerors in the 13th century.

The above remarks allowed of being confined to the densest possible form since the author made use of the historical chapter in v. GLASENAPP's "Jainismus" (1926) including various details and references to sources³. It was followed by Ch. L. SHAH, Jainism in Northern India (1929); the South was treated in DESAI's book previously mentioned (1957). His predecessors were M.S. Ramaswami AYYANGAR, South Indian Jainism, and B Seshagiri RAO, Andhra Karnataka Jainism, both combined under the title studies in South Indian Jainism (1922). S. B. DEO gives an historical account in his History of Jaina Monachism (1956) p. 57-130.

§30. After having dealt with the exterior adventures of Jainism we now turn to its inward changes. The teaching proper was scarcely affected by any of them. The so-called schisms of the early times (§ 17) concerned quite subordinate

points and were overcome in the pale of the Order itself. The new formations which developed to remain are nearly exclusively concerned with formalities. This becomes evident already by the alienation between Śvet. and Dig. which goes back, as we know, to a more uncompromising conception of monkdom on the part of the latter. It crystallizes around the idea of the ideal monk, i.e. the Kevalin. He no longer takes any earthly food but is merely kept alive by a constant influx of material particles, a process the Śvet. would call *lom'āhāra* (§ 96). To think that he ate and digested was most certainly shocking¹, as much as in the view of Dig. it was against his dignity to decorate his temple figure, and, especially, against that of Mahāvīra to imagine him owing his origin to an operation performed by some divine gynaecology (§ 17), or to think that he was married. If, furthermore, there can be no salvation without nakedness² (Chapp. 3,23), then it follows that all female persons, since they cannot go without clothes, are excluded from it (and that is why Arhat Malli—§ 15—is said to have been by no means a girl). The extreme conclusion, however, that accordingly there should be no nuns at all, is not yet drawn by Vattakera in the Mūlācāra, an early work, nor by others (§ 137). But we come across it in the Chappāhuda (3, 24f), which is attributed, though wrongly, to Kundakunda³. The Dig. on the whole deny the *strī-mukti* up to this day, but yet we find that the attitude of the Śvet., since ever more capable of adaptation, has penetrated into their thinking here and there. Among the Dig. there were so-called *saṃghas* called Kāsthā, Mūla, Māthura, and Gopya or Yāpanīya. Acc. to the Śvet. Gunaratna⁴, who, it is true, lived, as late as in the 15th century (s. 1466), they are *ācāre gurdu ca deve ca* equal to the Śvet. so the *Gopya* equal them

1 With regard to digestion we have the same attitude with the Śvet. *pacchanne āhāra-nīkāre, adisse māṃsa-cakḥhunā* (a śloka line, to read *pacchann'* Samav. 60a), and also in Chapp. 4, 37 we have to understand the word in this way.

2 For this there are 9 reasons, see Dharmasāgara in the Kuv. (§ 32) in WEBER, Kup. p. 798

3 The AUTHOR ZDMG 10 f. p. 55 f. 5 f. 7

4. Comp. Haribhadra, Śaḍdarśanasamuccaya ed. SUALI p. 111. .

in using as a salutation the word of *dharmalābha*¹ and in allowing women to find salvation and the Kevalin to live on food. The by far older Devasena, who may perhaps deserve some credit with questions concerning the Dig. (§ 26), traces (Dams. 29) the *Yāpanīya* back to a Śvet., i.e. the Sīrīkalasa at Kalyāna (s. 705)². Among the different customs of the Kāsthā-s., which is said to have been established s. 753 by Kumārasena in Nanditata (Dams 33 ff.), we may in this connexion mention the *dīksā* of female persons³.

As regards the Mūla- and the Māthura-s., Gunaratna refers to them merely with respect to their adherents being distinguishable by the whisks (*piccha*) of different kind used by them as hand-brooms (§ 145) which he also mentions in connexion with the aforesaid. Acc. to Devasena (Dams. 40ff.) the *Māthuras* branched off 200 years after the Kāsthā-s., and they did so thanks to a certain Rāmasena at Mathurā who, among others, believed in Padmanandin (i.e. Kundakunda) less than in Bhūtabali and Puspadanta both referred to as pupils of Arhad-bali in the inscriptions (s. b.). The place mentioned concerns Mathurā on the Yamunā, since it is at Dakkhina-Mahurā, i.e. Madurā, where in s. 526 the *Drāvida*-s. is said to have originated (Dams 24 ff) Its founder was Vajranandin, a pupil of Puṇyapāda (Devanandin). He and his like were less scrupulous about the *ahiṃsā* than the traditional teaching wanted it, and so they were liberal in questions concerning nutrition and civil activities⁴. Of the Mūla-s we learn nothing from Devasena

1 The other three s. with "dharmavṛddhi".

2 A second Ms has 205 The occurrence of Yāp. in Khāravela's large inscription discussed by SHAH, *Jainism*, p. 180 f appears to be rather doubtful For recent investigations see UPADHYE JUB 1, p. 224 ff and DESAI p. 163 ff

3 Further characteristics of this *saṃgha* under the proviso that he coincides with the Gopucchikas (comp footnote 1 on p. 46) see Śrutasaṅgāra on Chapp. 1

4 For the sake of completeness we mention the prophesy rendered Dams 45f acc. to which after 1800 years hence the monk Vīracandra of Puskara in the Vindhya mountains in Deccan will destroy the teaching by the Bhīllaka-saṃgha — In Nītisāra 10 Indranandin speaks of the five *jain'ābhāsa* or false Jains by whom he means the Śvet., the Drāvida- and Yāpanīya (IA 21, 68, Yāpuliya) — saṃghas, the Nīhpimchas (i.e. as shown by Gunaratna the Māthura-s.) and the Gopucchikas who may stand for the Kāsthā-s. (called *camarivālaḥ picchika* by Gunaratna) (but IA 21, 68 instead of Gop. Kekipiccha).

since this does not mean a branch but the religious centre of the Dīgambaras. For it was the *Mūla-saṃgha* from which by means of integration (*saṃghaṭṭana*) in earlier times Arhadbali had formed the *saṃghas* called Simha, Nandi, Sena¹, and Deva. This we learn from inscriptions dated 1398 and 1432 A.D.², from the *Nītisāra*³ composed by Indranandin between 1524 and 1565, and from *Pattāvalis* of the last centuries⁴. In the latter works those four names are explained by the special praxis of individuals, and the fact is stressed that these four *saṃghas* harmonized with each other, though the measures taken by Arhadbali were meant to be an act of pacification after controversies had shown up in the course of time (*kāla-svabhāvāt*). Acc. to the latter inscription the classification was made after Akalanka's death (2nd half of the 8th century). In the 12th-13th century, however, there was once more a *Mūla-saṃgha*. At least the Nandi-s. was divided into *gana*, *gaccha* and *vali* (*bali*), and its adherents had as a second name of the words of *candra*, *kīrtideva*, *bhūṣana*, and *nandin*⁵.

§31. We now turn back to the Śvetāmbaras. If we were certain about the time when the three smaller texts going by the name of *cūliyā* were composed, we should know at what date the declines from the normal level described by them had occurred. The prophesy pointing at 1990 after Mv. rendered in the *Vaggacūliyā* leads to the 15th century A.D. which cannot be the date of their origin. Here we are told of the disrespect shown towards sacred texts. From the *Angacūliyā* we learn that partly with the superiors' knowledge and consent persons slipped in without being formally accepted. Their exposure then led to

quarrels and schisms¹. The Vīyāhacūlyā, finally, by the means of 16 interpretations of dreams designs a picture typical of the time of its origin. In addition to the details already mentioned in §21 we may, in this connection, point to the loss of texts for instruction, the corruption of monastic morals, the flourishing of heresy, the disregard for the Order on the part of outsiders, the deficient training of preachers owing to the absence of *theragas*, and bickering and biting among the monks.

Since detailed reports are missing, it may be assumed that the grievances here referred to were of an importance going far beyond the regional. The custom, however, of using the cult-places as living quarters as well (*cariya-vāsa*) seems to have been observed at certain times especially in Gujarat. According to ancient prescriptions (§ 147) the monk is expected to ask for his quarters in ordinary homes (*vasati-nivāsa*). Those who acted differently may have referred to the Canon saying that sermons and instructional talks invariably took place at a *cariya* (§ 18) which may have developed into taking one's quarters there. The argument² in favour of and against the *cariy'ālaya* quoted in the Mahānīsiha is not motivated therein. The early leaders of a Gaccha (§ 34) saw their task in opposing the *cariya-vāsin*, and so energetically was it refuted at Gujarat by Jineśvara in s 1080 that for this refutation³ he came to be given the surname of Kharatara (after which his Gaccha⁴ was accordingly called), whereas the *cariyavāsin* were called *kuvala*. Jinadatta (12th-13th century s.), the chronicler of this Gaccha, is, moreover, very desirous in pointing out, that Haribhadra was not a *civāsī*, while Śīlāṅka is spoken of with respect even though he belonged to them.⁵ So, then, even Haribhadra had stood up against the abuse of sanctuaries by profane music and other worldly

diversions, above all, however, as is equally reported by Jinadatta in his *Caccarī*,¹ Jinavallabha- (who died in s. 1167) restored them as *vidhi-cātīya-gr̥ha*, i.e. by turning out trespassers and by enforcing a dignified conduct for their dignified use. In his *Uvaesarasāyanu* and his *Kālasvarūpakulaka*,² Jinadatta renders a sinister report on the state of affairs prevailing among the Śvet. in the 12th century.

§32. The antagonism between dwelling places and such devoted to cultic activities revives many centuries after in the name of the *Sthānakvāsī*. By this name such Jains are designated that practise their religious duties not in the temple but exclusively at some profane place (*sthānaka*), i.e. in the *Upāśraya*. Their reason for doing so is that they refuse the cult of the Jina statues, and they refuse it because only the living deserve veneration but not dead matter like the *pratimā* or *bimba* to which particularly the Canon does not refer. The latter argument is wrong, for at least *Rāyap.* mentions statues of *Titthagaras* (§ 25). The *Sthānakvāsī*, however, are not the originators of that conception, they merely pursue or either revive it in the beginning of the 18th century. As early as s. 1508 there appeared a sect headed by a certain *Lumpāka* or *Lonkaśa* from Ahmedabad and calling itself after him by the name of *Lumpāka*, *Luṅka*, *Lonka* or *Launka*, since when professionally copying manuscripts he had discovered that they contained nothing about the cult of images. The arguments referred to are attributed to *Lumpāka* in *Dharmasāgara*'s polemic work bearing the title of *Kuvakkhakosiyasahassakirana* and composed at a time (s. 1629) when the *Sthānakvāsī* had not yet existed. They did not appear until s. 1710 in Surat under the leadership of *Lava(jī)*, the son of *Vīra*, who reorganized *Lonkaśa*'s Order. The community also passes by the name of *Bāvīs* (or *Vīs*) *Tole Panth*, and its members are called either *Dhundhiyā* or *Dhundhak*, the latter meaning futile "seekers" in the script³ and the former owing its name to the fact that the sect goes back to

22 groups (*tolā*) under named leaders.¹ Notwithstanding this fundamental difference various Sthānakvāsīs still to-day call themselves Śvetāmbaras² though without acknowledging all of their texts, i.e. repudiating 13 out of its 45, including the Mahānisiha, for their attitude towards the *paḍimās*. Hence the Batīsī mentioned §4. An earlier branch of Lonkaśa's community dating from either s. 1531 or 1533 was represented in Rajputana and in Gujarat by the Vesadharas who must have stood out by wearing some conspicuous costume.³ A counterpart to the name of the Bāvis Tolā is that of the Terāpanth, the "path of the thirteen", which appeared in Marwar in s. 1817. The Terāpanthī, within the frame of their strict orthodoxy, equally reject the cult of images since the founder of their sect, Bhīkanjī, was a Sthānakvāsī, but they equally counted themselves among the Śvetāmbaras⁴.

§33 The afore mentioned publication of Dharmasāgara, known also by the title of Pravacanaparīkṣā⁵, is up to now the only contemporary source for the Lumpākas and the Vesadharas, though for its polemic character it has to be valued accordingly. While the aversion to images represents an actually far-reaching disparity of views, Dh., on the other hand, deals with a number of other sects whose principles vary but insignificantly from the standard rules. We therefore content ourselves with rendering but a few statements. The Paurṇamīyakas (s. 1159) derived

5 BHANDARKAR, Report 1883-84, p 144-155; WEBER, Über den Kupakshakaucikāditya des Dharmasāgara, Streitschrift eines orthodoxen Jaina, vom Jahre 1573 SPAW 1882, 793-814, merely discusses the fragment of a ms. of which the most important parts are missing.

their name from the confession act on full moon-day (*pūrnimā*)-to which they attached as great an importance as to Jina figures being erected exclusively by laymen without the assistance of monks (*śrāvaka-pratisthā*). Banished from Gujarat by Kumārapāla (§ 28) they gained ground once more as Sārdha-P. after his death (s. 1236), which possibly expresses itself by their name as “sesqui”P. unless, as some want it, Sādhu-P. is the authentic form. The Āgamikas or Tristutikas¹ (s. 1250) would not hear of any worship of the *śruta-devatā*² (§14), in other words, they felt it to be an adulteration of the true teaching. They as well as the Lumpākas, though they did not share the latter’s aversion to images (1, 75), resembled those who had appropriated the *mata* of a certain Bīja (s. 1570) who himself was no man of spiritual rank ([?] *vāṇṇa-vihīna*). The followers of Kaṭuka (s. 1562 or 1564)³ were equally connected with the Āgamikas though the rendering of this connexion is not altogether clear. On the other hand they were radical enough in rejecting monkdom and insisting as laymen on the right of preaching and converting. This most certainly resulted from observing the Sādhus leading a non-religious life, so that here, too, it may be assumed that their decisive reforms coincided with the preservation of true belief and good conduct.

§34. Apart from dealing with the Dīgambaras, Dharma-sāgara in his publication finally refers to a number of branches which for the lack of essential material divergencies would scarcely be designated as *kupakṣa* by any impartial author. He himself belonged to the Tapā-Gaccha. In linguistic usage the *gaccha* follows on the *gana*.⁴ In the course of time there are said to have been numerous *gacchas* or Orders which is frequently

4. The change of the earlier name into the later can be pursued in the Mahānisiha (the AUTHOR, Mahānisi, p. 78).

expressed by the figure of 84 (§ 16)¹, but only few of them have come to gain any considerable and lasting importance. Thanks to the disposition of the Jains for chronicling we have comprehensive lists of teachers to inform us accordingly.² They usually go by the name of *paṭṭ'āvalī* in the sense of *paṭṭadhar'āvalī* since in this connexion *paṭṭa* means "place of honour, throne". He who occupies it bears the title of *Sūri*, and he personally appoints his successor. Frequently the lists (chronicles) are traced back to Sudharman, or even to Mahāvīra who, however, is not everywhere considered as *paṭṭa-dhara*.³ The Upakeśa-Gaccha, to refer to this list first, even goes back to Pāsa which follows from an intended relation to Keśin, the disciple of Pārśva known from Uvanga. The fabulous *paṭṭ'āvalī* of this Gaccha probably written in the 2nd half of the 17th century,⁴ proves as an exception to the rule that these chronicles are mines of reliable dates regarding the history of Jain Orders and writings.⁵ Upakeśa is said to be the later Os near Jodhpur from where the commercial Jain caste of the Osvāl derive. A collection of the Śvet. lists in a *Pattavalisamuccaya* has been started by Muni DARŚANA-VIJAYA (Bh. 1, Cāritrasmaṛaka-GM. 22. Viramgām 1933).⁶ Now it is Dharmasāgara who, in a Prakrit-Gurvāvalī⁷ with an individual Sanskrit comment, notes the history of the Tapā-Gaccha who, so he says, took this name but as the sixth after that

⁵ A second exception is the "apocryphal *Pattāvalī*" rendered by KLATT in *Festgruss an Bohtlingk* (1888, p 54-59)

⁶ For the names of 17 *Paṭṭ* s see KLATT-LEUMANN IA 23, 170

⁷ KLATT, IA 11, 251-256, WEBER Verz II, 651 f 997-1015, for this and for chronistic predecessors and successors of Dh see KLATT-LEUMANN IA 23, 179; compl text and comm *Pattāvalisam*. 1, 41-77, followed by further *Tapā*-tradition.

of the *nirgrantha*- and those of Koṭika-, Candra-, Vanavāsī and Vāṭa-Gaccha, altogether names which are explained in different ways. Different from two other lists presently to be mentioned, this list by starting from Uddyotana, the 35th Sūri (till s. 994), follows its own way as that of Vāṭa- or Br̥had-G. and leads up to the 44th Sūri, Jagaccandra, who equally gained fame as a reformer and as a triumphant disputant, but who as a stern fasting ascetic came to be given the surname of Tapā (*Tapā-biruda*) (s. 1285)¹. Still today the Tapā-G. enjoys a high reputation. This also applies to the Kharatara-G. and others, whom to attack is a special concern of Dharmasāgara's in his work. In their *patī'āvalī*² the Kharatara, too, appear beyond the time of Uddyotana just as the formation of the above mentioned 84 gacchas is said to go back to the same number of Uddyotana's pupils who are said to have been blessed by him individually in a ceremony before he died.³ One of them, and hence the first Kharatara-Sūri proper, was Vardhamāna (till s. 1088)⁴, by origin a *cattiyavāsī*, who were energetically attacked by his own pupil, Jineśvara (s. 1080), as we have seen in § 31. This report of the Kharatarasa, however, Dharmasāgara⁵ declares to be false owing to historic dates,⁶ and he refutes the statements it contains also elsewhere. Acc. to him it was Jinadatta (s. 1204) who came to be the first Kharatara, and it is said that his activities equally account for his further names⁷ Cāmundika, because Jinadatta dedicated a prayer to Cāmundā, and Austrika, because he fled on a camel. As to the peculiarities of the Kh. we hear of them from Jinadatta himself by an Utsūtrapadāghātanakulaka (30 G.), by a Sāmāyārī, and

1 Tapā seems to be the intimate form for a name beginning with *tapas* as Yaśā is said to have been for Yaśovijaya (§ 36)

6 This, too, is the object of an assumed dispute bearing the title of Kharātma-jānām niṇṇava-sthāpanā-vāda-yuto mūlapuruṣa-vādaḥ.

7 DHARMASĀGARA, Gurv in Ajitadeva Sūri (No. 41), WEBER, Kup. p 804

again, most comprehensively, from Dharmasāgara in his *Austrikamatotsūtrodghāṭanakulaka* commented by himself (18 G.)¹. By a change of the sign the last small text implicitly teaches us to know the standpoint of the Tapās. The various points of divergence scarcely concern anything but irrelevant matters of praxis. As being of some slightly greater importance we, therefore, but mention that women may not worship the Jina (*utthi-jina-pūya-nisehana*), that there is no fasting beyond the *cauttha* (§ 156), that laymen will not exercise *paḍimā* (§ 163), that the Cāmuṇḍā and other local deities may be worshipped, and that the ceremony of Mahāvīra's being put into another womb is to be celebrated as his sixth *kallāṇaga*².

§35. Among Uddyotana's pupils we have Sarvadeva, the teacher of Padmadeva. With them as the 36th and 37th Sūri there begins the *paṭṭ'āvali* of Ancala-Gaccha³ who, though under Padmadeva he was still called Śankheśvara-G., was soon after named Nānaka-G. and under Āryarakṣita (No. 47) Vidhipaksa-G. by which name he is still known to-day. The name of Ancala does not occur here at all. But Dharmasāgara does deal with the Ancala-G. as such⁴ where he discusses the Ancaliya (Āncalika) or Pallaviya (Pallavika), once even Stanika (?). The reciprocal notes have one thing in common: that in the *paṭṭ'āvali* it was an *upādhyāya* Vijayacandra, in the *Gurvāvali* a certain Narasimha, who was one-eyed, as a Sūri was given the name of Āryarakṣita. The origin of the Vidhipakṣa-G. is there said to be the year s. 1169⁵, whereas here the Ancala-G. is said to date from s. 1213, So we have two completely different occurrences, and we certainly cannot charge the Āncalika of to-day with

saying that acc. to Dharmasāgara the *ancala* or *pallava*, i.e. the corner of a dress, had stood for the face cloth by way of imitating an individual case, and that later also the hand-broom and even the act of confession had been dismissed. At least the latter does not apply to the praxis of the Vidhipaksa.

In conclusion we have to add that the Kuv. was also concerned with the Gaccha of the Pāśacandras¹ whose foundation goes back to an *upādhyāya* bearing the same name and being descended from a sidebranch of the Tapā-G. as such frequently developed being called *gaccha* as well or, as was the case already in ancient days, *śākhā* (comp. § 25). In this case it was a *Nāgaपुरीया*--Tapā-G. which had developed at Nāgaur (Rajputana) in s. 1174 and within which Pāśacandra established his *mata* in s. 1572. He distinguished himself as an independent writer and as a commentator of canonic texts who as such a one also calls himself Pārśvacandra.² Since his Bālāvabodha and Vārttika are still being acknowledged he is not likely to have departed very far from the principles of the doctrine. Nor did he ignore the scholastic comments and the Chedagranth as he is blamed for having done by Dharmasāgara. He is said to have had different points of contact with the Lumpākas. BHANDARKAR is not fully intelligible in reporting on a system developed by Pāśacandra.³

§36. Since the forming of a Śvet.-Gaccha⁴ of the kind described above lastly always comes as a protest against the traditional state of affairs in order to replace it by a better one, there can be no doubt that in return reformatory efforts were made within its body. This we may conclude from the discrimination still made to-day between monks of a higher and lower class.⁵ The former are the Sādhus and the latter the Yatis. Contrary to the linguistic usage in mediaeval times when both

words meant the same, the Yatis are the spiritual successors of those monks who had not participated in the reform. The point where this process starts is found with the Tapā-Gaccha. Of this Tapā-G. Yaśovijaya Ganin¹ of Gujarat was a member. After having been trained in Jain learning at home his Guru Nayavijaya of Benares made him become a master of logics who as such proved extremely productive. He died in s. 1745. Without occupying a leading position in the Order² he carried out his reforms on the initiative of Vijayasimha whom the Vijaya-śākhā calls their first Sūri, although Vijayadeva who had appointed him Sūri in s. 1682 outlived him, who died in s. 1709, by four years³. In the way he opposed both the Digambaras and the Dhundhīyas⁴ so he was successful first in his own Gaccha. He who followed him came to be called a *saṃvegi* dressed in saffron, whereas he who refused him continued to dress in white, and that is why to-day we hear him being called not only a *yati* but a *gorji* as well. This differentiation obviously spread from the Tapās over to the Kharataras, for in our days here, too, we come across the white Yatis who even have a hierarchy of their own. So, then, in concluding our historical sketch we observe among the Śvetāmbaras the same capacity to which in remote antiquity they owe their origin: to cling faithfully to the values of tradition even though reformed.

THE CANON

§37. In the canonical texts¹ (Uvav. and (a.o.) Viy 134b; Thān. 176a) Mahāvīra's teaching is called *niggantha pāvayana* (Viy. 792b *pavayana*²), more precisely *duvālas'anga gam-piḍaga* (a.o. Viy. 792b; 866b=Nandī 246b, Samav. 106b). This means "the basket of teacher(s)³ containing 12 Angas". Samav 73b speaking of Angas 1-3 calls one individual Anga *gam-piḍaga*. The consonance with the *tipitaka* and the *anga* of the Buddhists (for the latter word comp a.o. WINTERNITZ, History 2, 8) is apparent. As to *anga*, a reminiscence of the Vedāngas is equally possible. But while *vedānga* means "auxiliary members" (to the Vedas), the Jain Angas are members of a unit formed by themselves. The collection through which this unit must have been established, is due to a council at Pātaliputra described by the Śvetāmbaras in Par. 9, 57ff Considering that Bhadrabāhu who belonged to the 6th generation following Mahāvīra played an important role in it (§ 23), this council must have taken place in the 2nd decade of the 4th century B C. On the other hand it must be mentioned that, as was pointed out by JACOBI,⁴ the oldest texts owing to metrical observations seem to date from times not earlier than the end of the 4th and the beginning of the 3rd century, the more so since the value of literary products is acknowledged not earlier than a good time after their being composed and then leads to their collection.

1 They have been treated exhaustively by H. R. KAPADIA in his learned book "A History of the canonical literature of the Jainas" (Bo 1947), and it is with pleasure that the AUTHOR, while suppressing some minor criticism, refers the reader to that work for many details which could not be mentioned here

2 In company with *pāvayana* Āv 127

3 Śīlānka to Sūy nujj 136 (p 253 b) is correct, the contrary Abhaya-deva Samav 107a, Malayagiri Nandī 193a

4 SBE 22, XXXI ff ; ZDMG 38, 590-619; 74, 255

We have seen that the Angas are not additions to something previously existing. Tradition, on the other hand, will have it differently in speaking of the so-called Puvva. They are no longer in existence. To explain the word, Abhayadeva in his comm on Samav. 130b says that the Angas were composed by Mahāvīra's Ganadharas (§22) either immediately in the spirit of the preceding (*pūrvā*) oral tradition or indirectly after first (*pūrvā*) having established that tradition¹. But he does not derive the Angas from the Puvvas. If this had been the case, the Puvvas would have been absorbed in the Angas. Instead we read in the survey of what the A. contain (Samav. 129a; Nandī 236b) that the 12th of them (which was lost) included the P. and other topics. Hence it follows that the two series were parallel to, not dependent on, each other.

§38. It is in harmony with the misunderstanding according to which the P. were the most ancient evidences² that some of them are said (Dasav. nijj. 15-17) to have been the sources for canonical texts, viz. P. 6 (Saccappavāya) for Dasav. 7 (Vakkasuddhi); 7 (Āyapp) for Dasav. 3 (Dhammapannatti=Chajjivaniyā); 8 (Kammapp.) for Dasav. 5 (Pīndesanā). The remaining chapters of Dasav. are said to come from the Paccakkhāna-P. (9), *vatthu* 4, and from the same, *vatthu* 3, *pāhuda* 20, as the Āv.-nijj will have it, the Cheyasutta Dasāo, Kappa, and both Vavahāra and the Ohanujutti. Utt 2 (Parisahā) is derived from P. 8, *vatthu* 20. Moreover, one of the Gāhās preceding the Panna-vanā refers to the P. (another one to the Diṭṭhivāya, s.b.). For the present writer it is beyond doubt that it was merely a relationship in contents that has led authors to construe those origins, provided that the Puvvas did actually lie before their eyes. This supposition is necessary since at all times imagination is keen on filling up evident gaps.

In reality the name of *puvva* was due to the apologies of which the texts must have consisted. The lists mentioned count 14 P. and summarize them as *puvva-gaya*. With the

¹ Comp. Āv 92 (106b) *atthaṃ bhāsaḥ arahā, suttam ganthanti gaṇaharā nuṇam*.

² JACOBI SBE 22, XLIV ff; BAGCHI, J. Dept Letters (Univ. of C) 14, Nr 9—.

exception of four they all have *pavāya* in their individual title which means the utterance of a contradictory view (*pravāda*). They are combined with various fundamental questions and ideas, viz. *upphāya* (1), *vīriya*, *atthi n'atthi*, *nāṇa*, *satca*, *āya*, *kamma*, *paccakkhāna*, *viyyā* (3-10; 10; *viyyānupphavāya*). It follows that they were adversary objections evidently not preserved out of historical interest, but as instructions how to refute them. Similarly we read Viy. 380b that Mahāvīra's monks having refuted their opponents, proclaimed the Gaippavāya¹ who was called an *ajjhayana* and hence was intended to set them right by an adverse view (in this case the right one). Whether the *pavāya* of the Diṭṭhivāya (the 12th Anga) were fiction or fact we do not know. The names of P. 2 Aggenīya of Aggāniya², 11 Avanjha, 13 Kiriyāvisāla, and 14 Logabindusāra for their obscurity all speak in favour of their factitive nature.

From Thān. 199a; Samav. 128b; Nandī 235b we learn³ that the Diṭṭhivāya consisted of the sections *parikamma*, *suttāṃ*, *puvva-gaya*, *anuoga*⁴, and (with P. 1-4) *cūlyāo*. Here, evidently, the course of a dispute is reflected where *puvva-gaya* is the same as the well-known *pūrvā-paksa*. The "introduction" is followed by the "sūtra" which may have been construed *ad hoc* and which then are "attacked" whereupon a close "examination" unveils the truth. The 12th Anga thus, under the title of a "discourse on (heterodox) views"⁵ (which is but one of other titles showing a didactic or polemic meaning, comp. Thān. 491b) was an instruction to apology and quite naturally fitted closely in the doctrine laid down in Angas 1-11. In the course of time it was lost. JACOBI (SBE 22, XLV) explains this fact by saying that later generations thought the

5 Sthān 491b both *Dīṣṭvāda* and *Dīṣṭipāla*. The latter gives a good sense, too; "Collapse of refuted views."

discourses of their early predecessors not to be important any longer. It is more likely that their preservation appeared to be undesirable since the study of such disputes was apt to arouse heretical thoughts and activities. Some quotations from the Puvvas indeed have been preserved in the reports on the early schisms (§ 17) exclusively.

We have seen that our interpretation of the word *puvva-gaya* is, partly, based upon what both Samav and Nandī say with regard to the contents of Anga 12. Though there can be no doubt that these are merely rhetorical, we must suppose that the names of the sections have been preserved just as faithfully as those of Anga 11. The minute descriptions of the subsections, on the other hand, seem to be fictitious, and all attempts of an interpretation are useless, since he who wrote down the alleged contents had the Dīṭṭhivāya no longer before him.¹ No less fantastic, therefore, is the extent in *vatthu* or "subjects" attributed to the Puvva (to be seen also in Samav 25a; 26b, 35b, 44b and in Thān), to say nothing of their number of words. Their alleged size corresponds with their gradual loss, as referred to by the Śvetāmbaras and registered in the posthumous spiritual titles of *cauddasa-* (*coddasa-*), *dasa-* and even *nava-puvva*. The last to know all 14 of them was Sthūlabhadra (§ 23). For it was he whom they were told by Bhadrabāhu upon the request of the Council of Pāṭaliputra, but he was forbidden to teach others more than ten (Par. 9, 110). After the seventh patriarch following Sthūlabhadra even these were lost. And that is why Mahāgiri and his successors up to Vajra are called *daśapūrvin*. So far the Śvetāmbaras; the Digambaras have eleven *daśapūrvadhārīn* with other names. The last of them, Dharmasena, is reported to have died in 315 A M.²

§39 The gradual loss of the Puvvas, which must have happened according as an apology in general or in the shape

¹ The AUTHOR, *Worte* p. 5 — LEUMANN (VI OC III, 2, p. 258) thought to see a close relation of a small Śaiva text with the Dīṭṭhivāya, *Parikamma* 1. Possibly the so-called contents of the Dīṭṭhivāya have been composed after the model of that kind of texts, since the real facts were no longer known, not vice versa, as LEUMANN believed.

² *Sakalakīrti*, comp. BHANDARKAR loc. cit. S. 125.

taught by the Dīṭhivāya was no longer necessary or desirable, has been copied by the Digambaras with regard to the Angas. They give the names of five patriarchs whom they say to have known 11 Angas, and of nine more who knew 10, 9, 8, 7 (²) and 1 Angas only, until eventually that too—the 1st—was lost. This report is based upon the Digambaras in very early times having become alienated from the collection of the Angas, from which it followed that they no longer acknowledged them as authoritative. Hence, for the Digambaras, the Angas of the Śvetāmbaras are younger productions, and when the latter give the number of words in them (Samav. 107 ff., Nandi 209b ff.)¹, the former bring up other figures against them². To a certain degree it is justified to look upon the Angas as being of a younger age, since they have not come down to us in their original shape. This follows from comparing their present state with tradition and subjecting it to a critical view. As the saying goes, new wine has been poured into old bags. The method was to form a unit out of parts and fragments, to supply lost portions and even works, and, in many cases, to arrange the text suitably. It is probable that all this was the result of two councils,⁴ the one taking place at Mathurā, the other at Valabhī (Kathiawar), and both presided by Skandīla and Nāgārjunā respectively. In the course of time the former must have gained the upper hand, for, when in one more Valabhī council Devarddhi undertook to lay down the wording of the text definitely, he gave the Nāgārjunīya pāṭhas not the first but the second place, even though he stood in the *paramparā* of their originator (s. b), Devarddhi is reported to have got copies of the holy works multiplied with a view to provide with them as many communities as possible. Memorial verses serve to faci-

1 Up to Anga 4 the figure is doubled, Anga 5 has 84,000 words (a favourite figure), and the rest *samkhyā* words (see § 21)

litate the survey of the contents for the monk students. This, of course, had to be preceded by collecting the works within reach¹ Here we have the origin of the Canon. This event took place, according to Jinac. § 148, in 980 or 993 A V.

§ 40. Nandī 202a, 153b; Anuog, 6a; Pakkhiya-S. 61b divide the substance of the teaching into *anṅa-pariṣṭha* and *ananga-p.* or *angabāhira*. While history, as we have seen, is concerned with the Angas only, we here learn that there were more works in existence. This is no wonder since the Angas do not include any regulated prescriptions for the monks' discipline which must have been observed from early times onward. Its germ are the 6 *āvassaya* (§ 151), i.e. formulae for daily recital, the knowledge of which was, indeed, "indispensable". They were the starting point of discipline and, therefore, alone are opposed to all other *ananga-pariṣṭha* or *āvassaya-taritta*. These again are divided into *kāliya* and *ukkāliya*, i.e. into those that are to be learnt within certain hours devoted to study (§ 150) and into those that are not. The *kāliya*-list is an extension of what is prescribed to the monk in Vav. 10, 20 ff and elsewhere. In a certain way, the *ukkāliya*-list runs on parallel lines with it. In either list the titles partly are unica, since the works themselves do not exist any longer or at least did not reappear as yet, partly they belong to works incorporated into the Canon or are à la suite of it, and partly they are mere sections of both the last named kinds. Let us presuppose that the authors of the Vav. list (which attributes certain texts to certain years) must have been guided by paedagogic points of view, but we are unable to recognise them in the succession of the texts. Still this succession has furnished a basis for the grouping in the Canon. For among the Uvangas and Painnas some texts appear one after the other in the same order as they do in their quality as *ukkāliya* subjects nos 5-8 and 11-15.²

This is the opportunity for introducing the canonical sections following the Angas, viz. the Uvangas, Painnas, Cheya-

1. Comp JACOBI, Kalpasūtra p 114 ff., p. 15 ff., SBE 22, XXXVIII ff.
2. Ind Stud 17, 13 ff.

and Mūla-suttas, of which only the first name seems to be old. To judge¹ from its appearance in the introduction to Uvangas 8-12 there was a time when no more than just these Uvangas were called by this name, i.e. "secondary Angas" because of their being closely related in contents and style with Angas 8, 9 and 11². Later on out of those and other texts (all of which may be found among the *aṅga-paṭṭha*) there was a group formed by imitation of the 12 Angas not only as to numbering but as to its inner structure as well. For just as the Anga group starts with two works mostly composed in a high poetical and prosaic style (Bambhac. and Gāhāsolasaga) and then proceeds with dogmatical ones (Tḥāna and Samav.) followed by minor legendary accounts (Uvās. etc.), so does the Uvanga section³, as can be seen in the course of this chapter. Apart from the Angas, the Uvangas are the only section of a stationary size. Most various is the number of the Painnas or "mixed text". But the different lists betray a nucleus formed by Painnas of a disciplinary character, and among these we find a group of ten which are the most frequently quoted.⁴ The various classes of the Āgama seem to have been arranged according to the diminishing number of their members, for, historically, the Cheyasuttas ought to have preceded the Painnas. The latter dwell upon the monks' practice in more or less broad gāhā treatises, that is to say, in a remarkably imitative way, while among the Cheyasuttas (of which there are 5-7) we have the most ancient summaries of discipline. The name of this group appears as *cheya-ggantha* in Āv 8,55 and certainly means the punishment of *cheya*, i.e. the shortening of either a monk's or a nun's seniority. And it is this seniority upon which the communal life of either is based. When seniority is dropped altogether this is called *mūla* and, indeed, the culprit then must start from the "root". But this is the situation of novices, too,

1. The AUTHOR, Worte p. 8 .

2. Possibly also Anga 10 which once looked different from the one we have before us to-day (§ 46).

3. The AUTHOR, Worte p. 8 —But it is a fiction held by Jambūdv. 1b and others that the Angas and Uvangas bearing the same number were related with each other

4. Comp. v. KAMPTZ, Sterbefasten p. 5 ff.

and it is no more than logical to interpret the name of Mūlasutta in this direction on account of their clearly being selections and treatises about fundamental subjects for the instruction of young monks and nuns. From this point of view we understand why the diminution mentioned above is interrupted and why its mechanical principle is replaced by a methodical one¹. For in the solemn list the Mūlasuttas are preceded by two propaedeutic works, viz Nandī and Anuogadārā. In both of them the theory of knowledge is treated in the style of the time. The number of the Āgamas is 45 with the Śvetāmbaras, but 13 of them are rejected by the Sthānakvāsī, their puritan offshoot mentioned before² (§ 32). As to the Dīgambaras, it was already said that the Angas are missing there on account of their gradual passing into oblivion. This applies to the other texts, too. Some of them were lodged in their lists of lost works³. The 5 Pariyammas of the Ditthivāya are equated with 5 Pannattis, four of which we know as Uvargas, whereas the 5 Cūhiyās are said to teach different kinds of sorceries. Among the so-called Painnayās of the Angabāhīrayas current with the Dīgambaras we find the names of Śvetāmbara Painna-, Cheya-, and Mūla-texts.

§41. We now proceed to give the common survey of the extant Svetāmbara Canon (*āgama, siddhanta*). *Angas*. 1. Āyāra (quoted as Bambhacerāim, Cūlāo, Bhāvanā, Vimutti), 2. Sūyagada, 3. Tṭhāna, 4. Samavāya, 5. Viyāhapannatti, 6. Nāyādhammakahāo (quoted as Nāya and Dhammakahāo), 7. Uvāsagadasāo, 8. Antagadadasāo, 9. Anuttarovāiyadasāo, 10. Panhāvāgaranāim, 11. Vivāgasuya. *Uvargas* 1. Rāyapase-naijja,⁴ 2. Uvavāiya (quoted as Samosaraṇa and Uvavāiya), 3. Jivābhigama, 4. Pannavanā, 5. Sūrapannatti, 6. Jambuddīva-pannatti, 7. Candapannatti, 8. Nirayāvaliyāo. 9. Kappavadim-siyāo, 10. Pupphiyāo, 11. Pupphacūlāo, 12. Vanhidasāo. *Paṇṇas*. Causarana, Ārapaccakkhāna, Bhattaparinnā, Samthāra, Mahāpaccakkhāna, Candāvijjhaya, Ganivijjā, Tandulaveyāliya,

1 The AUTHOR, Worte p. 1

2 "Seeker", Notes (§ 32) p. 90. The AUTHOR, Mahānis. p. 100 must be corrected

3 Gommatas, Jiv. 360 f, 366 f

4. The AUTHOR, Worte p. VIII to be corrected

Devindatthaya, Vīratthaya and others. *Cheyasuttas*: Āyāradasāo (Dasā 8, "Kalpasūtra"=Jinacariya, Therāvali, Pajjosavanā-kappa; Dasā 10=Āyāitṭhāna), Kappa, Vavahāra, Nisīha, Mahā-nisīha, Pancakappa, Jiyakappa. *Nandī*, *Anuogadārā*. *Mūlasutta*: Uttarajjhāyā, Āvassayanijjutti, Dasaveyāliya, Pindanijjutti, Ohanijjutti. The homogeneity which, as we are led to assume, unites these titles is often merely an apparent one. Nearly all old and various later canonical works are composed of parts which frequently are rather incongruent, as may be seen from the brackets given above. Apart from such cases striking the eye there are others where parts and particles of some chapters, on the ground of higher criticism, can be connected in a new manner.

§42. Thus, when we replace the mechanical arrangement just given by a critical one, the result is as follows.¹ Apart from the āvassaya formulae the most ancient style presents itself in the Āyāra, Sūy., the Utt., the old Cheyasuttas, the Isibhā-siyāṃ, and in portions of the Dasaveyāliya. Significant are old grammatical forms, the tristubh, jagatī, vaitāliya, and aupacchandasaka metres, a primitive form of the Āryā,² the opening formula *suyam me, āusam*, etc., the concluding one *ti bem*, and, of course, the subjects, especially so far as they are formed by the will of self-preservation and the fundamentals of the order. A metrical investigation made by JACOBI, as was said before, resulted in surmising the origin of the most ancient texts at about the end of the 4th and the beginning of the 3rd century B.C. It hardly needs to be mentioned that the characteristics referred to are distributed differently upon the individual texts. The younger parts of the Canon show the younger grammatical forms, the common Āryā taking the place of the Śloka, and partly in them a symmetrical arrangement of subjects. This can be observed in most Painnas and in the Nijjuttis among the Mūlasuttas which are not far from the commentaries bearing the same name (§ 43). A good number of texts join in groups thus unveiling the peculiar taste of the author's times and later on

1. The AUTHOR, Worte, p 2 ff.

2. Āyār II 9, Sūy I, 4 (see ALSDORF Ind Ir. J 2, 259 ff), Utt. 8; comp JACOBI ZDMG 38, 590 ff, LEUMANN Z I I 7, 160-162.

becoming a mere habit. Considering the rôle the figure 10 plays in the titles, we speak of *dasā-texts*. In the second half of the Angas we come across clichés of stories called *vagga*, and thus we may sum up Dhammak., Antag., Anutt. and Uvanga 8-12 as *vagga-texts*. In Tṭhān. and Samav. conceptions and concrete subjects occurring in the teaching have been arranged according to number just as has been the case with details from discipline taught in the Āyāradasāo and some other texts by the *therā bhagavanto*, so that we are entitled to speak of *category-texts*. Further, there is the *vedha* metre, the locus classicus of which are Samos. and Jinac. They are the prototype for numberless passages in the later Angas, the Uvangas and the Āyāradasāo, passages meant to introduce or to characterise a scene or an object. Here catchwords indicating the opening and the ending of the passage to be supplied served the purpose. Hence we find many artificial *vedha-texts* next to the genuine ones mentioned to which we have to add Anga 10, 6 and 4 sections in Jambudd. The same distinction applies to the case of the *dialogue-texts*. On the one hand we have Viy. alone. It is true that here already question and reply are conventional, but the general impression is that of true life thanks to the variety of questioning individuals as well as to personal traits in Mahāvīra's answers. At anyrate, the Viy. is the prototype for the various artificial dialogues where the appearance of antiquity was combined with methodical fitness. The latter, above all, seemed necessary for the systematical explanations in the Uvangas. Their typical name is *pannatti*.

§43. The commentaries on the canonical texts exhibit the usual preferences and defects of scholastic literature, i.e. they represent the apprehensions of their time. We cannot neglect them, though, frequently, we are not in a position to follow them. Most popular among them are, of course, the Sanskrit explanations (*ṭīkā, vivaraṇa, vṛtti*) composed, as regards the Angas and Uvangas, by the classical scholars Śīlānka or Śīlācārya, who concluded his Ācāratikā in Śaka 798=872 A.D., Abhayadeva, who wrote in s. 1135 or 1139, and Malayagiri, who composed his Sanskrit Grammar between s. 1200 and 1230¹. These great

1. KIELHORN NGW Gott. 1892, 318-327; PATHAK ABHI 1, 7.

works mark the end of a long development; what follows them (*dīpikā* or *avacūri*¹) is insignificant and mostly no longer independent. The personalities mentioned are preceded by Hari-bhadra who, among various other scholarly works, wrote the Nandī-and Āvaśyakaṭikā. As has been proved by JINAVIJAYA² he belongs to the middle of the 8th century. His epoch is significant by its definitely turning away from the Prakrit commentaries in favour of such in Sanskrit. The development of the former at that time had reached the stage of the *cunni*. A *cunni* is a composition in prose³ of a kind wherein a change of language announces itself by a more or less intensive penetration of Sanskrit words and phrases into Prakrit. The object of the explanation is not confined to the canonical text, the Sutta, but also refers to the foregoing commentary, the Bhāsa or the Nijjutti. A *Bhāsa* is in metres and of a considerable length. Comprising thousands of Gāhās it far surpasses each Cunni, the name of which—Sanskrit: *cūrṇi*—dispersion⁴—is not badly chosen when compared with the block called *bhāsa*.⁵ This again is the Nijjutti, for us the Nijjutti (*nuyukti*⁶) is the earliest tangible stage in the Śvetāmbara commentaries, but itself it is the *gāhā*-skeleton for the body of prose explanations which had existed long before and were the ancestors of the material exhibited in a Cunni. The usual size of a Nijjutti, as we know it, is relatively small (a few hundred gāhās), but even there Bhāsa verses have been inserted. As long as such insertions were limited, the title of Nijjutti remained, in which case we find, in the course of time, a Nijjutti followed by a *Cunni*. But when the size of the latter had swollen

1 Often, but wrongly, *avacūri*.

2. JACOBI, Samarāiccakahā p 1 ff on account of JINAVIJAYA's results exposed in Sanskrit and published Poona 1919 under the title the Date of Haribhadra Sūri. Thus LEUMANN's calculation ZDMG 43.349 (s 904) is obsolete now.

3. Wrongly called metrical by CHARPENTIER Utt p 52.

4 The word is not confined to the Svetāmbaras nor even to the Jains. We find it, though apparently in a different meaning, in the Śivajñānabodha of the Shīvāites, see SCHOMERUS, Der Śaiva-Siddhānta p 26. Here *cūrṇikā*, *vārttikā*, and *udāharaṇa* are rendered as "assertion, argument, example"

5. *bhāsa* and *cunni* were confounded by JACOBI, Sthav (2nd ed) p. VI.

6. WEBER, Ind Stud. 17, 57 CHARPENTIER, Utt. S. 48.

up owing to an extraordinary number of Bhāsa verses, it was they that gave the whole work its title ¹ Both Bhāsa and Cunni do not furnish much information about individual words. What they do have to say is dictated by abstracts and is very schematical to the degree that we seldom find a connection with the Sūtra.² Instead, their importance as to history of thought and of literature will be great, when one day all of them will be accessible and subjected to scholarly study.

The Nijjuttis are looked upon as works composed by Bhadrabāhu, but they are centuries later than the leader of the Order who bore this name in the 3rd century B.C. (§ 23. 26) as is proved also by their being a domain of the common gāhā which was far from being in use at that time ³ LEUMANN holds that the collection of Nijjuttis to be mentioned presently, came into existence about 80 A.D.⁴ "It follows that 'Bhadrabāhu' is an author's name of the kind we meet with in India in great number (e.g. in law-books and many other literary products)".⁵ The author of Āv 2, 5, a great scholar, sees his task in writing a Nijjuttī on *Āvass*, *Dasav*, *Utt*, *Āyār*, *Sūy*, *Dasāo*, *Kappa*, *Vav*, *Sūrap*, and *Isibhāsiyāim*. Those belonging to the works in *italics* are at hand and have been printed with the exception of the *Utt*-and *Dasā*-nijjuttis. The printed Bhāsas will be registered below. Some Cunṇis are—or were—independent of Bhāsas, they partly belong to canonical works, a.o. to *Viy*, *Jiv.*, *Pannav*, partly to non-canonical ones as *Pakkh* and *Jiyakappa*. But we must not forget that the word *cūrṇi* in Sanskrit commentaries may denote the famous Āvassayacunni.

The authors of *ṭikās* and *vrttis* often register a different reading (*pāthāntara*, *vācanāntara* or sim.), and the same occurs in the Cunṇis (*padhijjai ya*). Such variants, partly considerable in

³ CHARPENTIER *Utt* p. 49 wrongly finds fault with the metrics of the Bhāsas and Nijjuttis. On the contrary, their authors have sacrificed grammar in favour of metrical correctness.

⁴ Übersicht, p. 28 b.

⁵ *Ib.* p. 23 b. JACOBI, *Sthav* (2nd ed.) p. VI calls the author a namesake of the 6th patriarch.

size, in Āyār., Sūy and Utt. are attributed to the Nāgajjunīya or Nāgārjunīya (s. a.) who sometimes are called *bhadanta* or *sakkhino*¹ in a friendly or respectful manner. The explanation acc. to CHARPENTIER² is that the authors of those commentaries were friends to Devarddhi, the editor of the Āgama who was a *paramparā-guru* of Nāgārjuna³. From this it follows that this time was later than the end of the 5th century A D. LEUMANN⁴ dates the Āvassayacuṇṇi from about 600 to 650 A D.

§44. We now proceed to render a survey of the canonical works and some more closely related to the Siddhānta. In some respect our survey has to be elastic in that not all details of the contents can be given. The general praise of the mendicant's life, for instance, could be, in many cases, omitted as being evident. On the other hand, care has been taken to enable the reader to find out subjects that should interest him, especially since it was impossible to incorporate all details into the description contained in chapters IV to VII.

The Angas

§45. Anga 1-5. 1 *Āyāra* 2. *Suyakkhandha* 9 (8) *Bambha-cērāim* and 4 *Cūlāo* The 6th chapter once was followed by a seventh called *Mahāparinnā* which was lost Both in his edition and his translation (s b) the AUTHOR undertook to solve many problems we find ourselves confronted with in the *Bambh.* by its mixing prose and verses or either by the fragments of such ones.⁵ The subjects in chapters 1-6 and 8 are *Ahimsā*, the avoidance of weakness and relapsing, and, on the other hand, endurance in hardships The last chapter (9) offers in ancient Āryās a vivid sketch of Mahāvīra's early career as an ascetic What was begun here was continued in the 4 *Cūlās* In the first we find

5 Comp the AUTHOR, *Worte* p 15 ff The commentators do not see metrical portions amidst those in prose It follows that Jiv 259 a the *Satthaparinnā* (=Āyār I, 1) is called *acchando-baddhā*

detailed prescriptions for the begging for alms, wandering, speech, the way how to ask for garments and alms-bowl, and such concerning the question of residence; in the second Cūlā we have prescriptions regarding ascetic postures and study, easing nature, and indifference towards external influences including favours and nursing. These chapters have been arranged according to the diminishing number of their sections, as is done in Sūyagada I. The third Cūlā is called Bhāvanā after the instructions for the right understanding (*bhāvanā*) of the 5 Great Vows which in their turn form the climax of Jain ethics and as such are rightly annexed to the above stated topics. But, as to quantity, by far the greatest space of this Cūlā is devoted to Mahāvīra's biography up to his leaving the worldly life. Since right conduct on the ground of the vows will lead to salvation, "Vimutti" is treated in the 6th Cūlā. For the Nisīha as once having formed a further part of the Āyāra see § 51.

Comm. . Nijjutti; Cunni¹ by Gandhahastin (printed); Tikā by Śilāṅka (concluded in Saka 798); Dīpikā by Jinahamsa. Rev : LEUMANN Z I I 7, 157-162.

1 As to the Cunṇis in general, see KAPADIA, History p 190 ff. As far as they have been printed, they, with few exceptions, have not come into the hands of Western scholars. Those the AUTHOR has seen and used, unfortunately are lacking any hint as to editor, among whom, as we understand, is ANANDASĀGARA Sūri, place and year, to say nothing of interpretation.

2. As to prints of the complete Canon the reader is referred to § 4. These prints are mentioned neither here nor on the following pages.

3 The second *suyakkhandha* (p 49ff) seems to have been printed without any revision on the part of the editor.

2. *Sūyagaḍa*. In Sanskrit this name is reflected as *Sūtrakṛtāṅga*, sporadically even as *Sūtrakṛdāṅga*.¹ But, as a matter of fact, *sūtra* in *Ardhamāgadhī* appears in the form of *sutta* exclusively.² Possibly we have *sūci*=*drṣṭi*, Pkt. *sū*=*sūya*.³ At any rate the name is taken from the discussions in *Sūy.* I 12, II 1. 5-7 of heretic systems and views. 2 *suyakkhandha*: *Gāhāsola-saga* and *Mahajjhayanāṇi*. The *Gāhāsol.* consists of 15 metrical chapters arranged in the manner mentioned in *Āyāra*. Quite contrary to its title (*gāhā*) the 16th chapter is in prose devoted to *Mahāvīra* explaining the terms of *māhana*, *samaṇa-bhikkhu*, and *niggantha*. Old *Āryās* appear in I 4 as they do in *Bambh.* 9 and *Utt.* 8. In I 5 we are given an elaborate description of the hells and the tortures therein, 2 *uddesa*. The 7 *Mahajjh.*, "great chapters", are indeed actually four big ones on prose, the following two are in verse, and the last is in prose again. As to contents see above. But we specially mention II 2 *Kiriyatthāna*, forms of activity; 3. *Āhāraparinnā*, a description of all forms of life and of their origin, as "told in olden ages" (*pur'akkhāya*); 4 *Paccakkhānakiriyā*, a discussion on guilt accumulated either consciously or unconsciously.

Comm.: *Nijjutti*; *Cunni* (printed); *Ṭikā* by *Śīlāṅka*; *Dīpikā*, by *Harsakula* — *Ed* : *ĀS* 2 along with *Nijj*, *Tikā*, and *Dīpikā*, *Bo.* s 1936 — *Āg S*, with *Tikā*, *Bo* 1917 — *AMP* 5, with *Nijj*, by *P. 3. *Ṭhāna*. A list of dogmatic topics which can be grouped in 1-10 categories, cases or possibilities (*thāna*). But for the cosmographical dates placed at the end of each chapter (section),

1. Comp *BARNETT*, *BM* (1908) s v.

2. *Kappasūya* in *PISCHEL*, *Gr* § 19 etc. = *Kalpasūtra* is a mere fiction

3. *Samav* 109 b; *Sūyagadeṇaṃ sa-samayā sūjjantī* etc = *sūcyante* *Abhay* — *Gommaṭas Jīv* 355 and *Brahma Hemacandra*, *Śrutaskhandha* 10 have *Suddagada*.

no leading principle is recognizable. Many categories appear in other canonical texts, whereas other ones are not to be found elsewhere. Thāna as well as Samavāya (s. b) refer to texts that got lost, and those we still possess are, partly, listed as having other sections.

Comm : Vrtti by Abhayadeva.—*Ed.* (along with the Vrtti): Ās 3, Ben. 1880 —Āg S , 1. 2. Bo 1918-20.

4. *Samavāya*. A supplement of, and a continuation to, Thāna according to groups of 1 up to 10¹⁴ (*sāgarovama-kodākoḍi*) objects The last third of Samav. is an appendix and in general describes the *duvālas'* *anga gaṇi-piḍaga*. In one further appendix the qualities of all beings are described in query and reply A third appendix, in common Gāhās, shows the dates of the spiritual and' (temporal) heroes. There is no doubt whatever that these appendices found their place in the Samav. on account of their numberings

Comm Vrtti by Abhayadeva —*Ed.* (along with the Vrtti): ĀS 4, Ben 1880.—Āg. S , Bo 1918.

5. *Viyāhapannatti* This is the true old name frequently perverted to Vivāhap as which PISCHEL unfortunately quotes it in his grammar. The later title of Bhagavaī is no more than an adjective occasionally attributed to Āyāra and Sūyagada likewise¹ What we have before us is a "proclamation of explanations" rendered by Mahāvīra as an answer to individual questions asked by disciples and, by far in most cases, directed to Goyama. 41 *saya* of which 1-20 seem to form the germ of the whole, and to which 25 can be added. *Saya* "one hundred" aptly means a great number of interviews taking place at different places and not interconnected by a distinct thread of thought Their sequence is frequently merely superficial and similar to what can be stated in the Bambhacerāim. Apart from the germ thus characterized, sayas 24 and 30 as such and 21-23 (subdivided into *vagga*, etc), 26-29, 31 and 32, 33 and 34, 35-40 form groups of uniform contents. Frequent references to other works, especially so to Pannavanā and Jīvābhigama, by which the preceding or subsequent topics are either introduced

1. Comp. Samav 92 a, Āyāraṇijuttī, 1, Sūyagada-ṇij 1.

or explained. No other texts furnished a picture of Mahāvīra's character and activities as distinct as that of the Vīy. in spite of the style being mostly conventional.

To analyse the whole Vīy. would go beyond the frame of this book. Its motley character will become sufficiently clear in a specimen, for which we have chosen *saya* 2.

Udd. 1.—1 (109 a). Breathing. 2 (110 b). A *madāi nīyantha* (§ 154). 3 (112 a). The scene: Chittapalāsaya near Kayangalā. The Brahman monk Khandaga Kaccāyana, a disciple of Saddabhāli, is instructed by Mahāvīra. On his part, Kh had no reply to the questions of the layman Pingalaga of Vesālī. The subjects are: the resp. finiteness and infiniteness of the world, the soul, *siddhi* and *siddha*; unwisely and wisely dying, Kh.'s conversion, spiritual career, fasting to death and post-existences — *Udd.* 2. §46. Anga 6-11. 6 *Nāyādhammakahāo* This title is a

dvandva with the *a* lengthened at the end of the first member, comp. Anga 10. WEBER was wrong in taking the name as Jnātrdharmakathā. Gommatasāra, Jiv. 355, speaks of Nāhassa Dhammakahā. *nāya* (*jnāta*) acc. to Ṭhān. 253b and Dasav. nīj. 51-85 is a story serving as an example, while *dhammakahā* means a sermon or lecture. Of the 2 *suyakkhandha* the first contains the *nāyāṃ*, whereas the second is said to be the *dhammakahāo*. But, actually, there is no more than 1 *kathā* multiplied over 200 times, with various places and names. This feature, frequent in the Siddhanta, must be taken as an attempt to attain completeness where materials were not at hand. In the case of Nāy. the great number of repetitions may reflect an intention of giving the second *suy.* a similar size as had the first. Prose along with Vedhas in most of the *nāya*. In the following lines no reader will expect more than the skeleton

1. *suyakkhandha*. 1. Ukkhitta. Intending to become a monk Prince Meha in his resolution is strengthened by Mahāvīra telling him how, in a previous existence, he himself, being a strong elephant, *patiently* protected a hare seeking refuge below his own lifted foot. 2 Samghadaga. Dhamma, a merchant, being thrown into jail and chained together with the murderer of his little son, *kindly* shares his meal with him. 3. Anḍa. Sāgaradatta impatiently breaks an egg hatched by a peacock, while Jinadatta *patiently* waits until it is hatched out. 4. Kumma. One turtle is killed by a jackal because it exposed itself to the danger, another one, being *cautious*, remained unhurt in its shell, since it waited until the beast had gone. 5. Selaga. King Selaga, converted to monkhood by Suya, a disciple of Arutthanemi, had grown weak owing to the hardships, but was *strengthened* by the encouragement given him by Panthaga, his former minister. 6. Tumba. A gourd cased with eight layers of clay will sink to the bottom when thrown into water, but will rise to the surface when the clay has dissolved Just so the soul when *released* from its Karman burden will rush up from Samsāra to the place of the Siddhas. 7. Rohinī, Rohinī, in contrast to her four careless sisters, *shrewdly* sows and cultivates 5 corns of rice (cp. Matthews chap. 25; Luke 19). 8. Princess Malli, by means of drast c simile contrasting beautiful

features and ugly intestines, *sets right* six suitors who thereupon take the vows (§ 15). 9. Māyandī. M's son, Jinapāliya, *firmly* resists the temptations of the cruel goddess of Rayanadīva, while Jinarakkhiya, his brother, yields to them and perishes miserably. 10. Candimā. The waning moon compared with the fickle monk, the waxing with the *persevering* one. 11. Dāvaddeva. Just as the *dāvaddava* trees growing on the ocean shore are strengthened by land and sea-winds (*dīviccaga* and *sāmuddaga*) so are *true* monks exposed to praise and blame. 12. Udaga. Matter is subject to change, as is demonstrated to King Jiyasatta by his minister Subuddhi by means of putrid water cleared to purity by seven times filtering. This method, as is explained by Subuddhi, was taught by the Jina, and thus *cleverly* the king's interest is roused for the Creed which eventually leads him to salvation. 13. Mandukka. Nanda, a layman, is reborn as a frog in a pond he had made for the general amusement of his fellow citizens. *Feeling his guilt* now he goes on a pilgrimage to see Mahāvīra, but on his way he is injured by a horse and dies saying "*namo tthu naṃ*", whereupon he becomes a god. 14. Teyalī. Pottilā, wife of minister Teyaliputta, had innocently lost her husband's affection and became a nun to be reborn as god Poṭṭila. As such she preaches him the Teaching, as has been stipulated previously, but it is not before he has lost his high position that she is successful in making him accept it. 15. Nandiphala. Some travellers, though warned by their guides, rest in the pleasant shadow of *nandi* trees and feed on their poisonous fruits so that they perish; others *avoid* both shadow and fruits and thus remain healthy and alive. 16. Avarakankā. A monk, Dhammarui, eats poisonous alms thus *sacrificing* rather *himself* than exposing to certain death ants which, as he saw, are dying when tasting them. Nāgasirī, who had provided the alms, is stricken with poverty and illness, and, finding no husband, in her next life becomes a nun, Sukumāliyā, thereupon a courtesan in heaven, then Princess Dovaī, who in her svayamvara chooses the 5 Pāndavas. She is raped by King Paumanābha of Avarakankā, but Vāsudeva Kanha defeats him and returns her to her five husbands. Four of them and Dovaī himself then join

the Order 17. Āinna. Some wild horses (*āinna*) ignorantly fall into the trap laid out for them and get caught, while others which are *clever* remain free 18 Sumsumā S., the daughter of a merchant, was raped and killed by a brigand, called Cilāya. Her father and his sons discover her body and eat of it from want of food Dhannā, her father, later becomes a monk. 19 Pundariya P., a layman, is a lay king, succeeds in persuading his younger brother Kandariya to remain firm in his monkhood, though fickleness and illness have befallen him. On the next occasion, however, he is not equally successful and the two brothers change places, the one taking the other's position, but K. dies soon after

The 2nd *suyakkhandha* has 10 *vagga*, which in pairs consist of 5.54.32 4 8 *ajjhayana* This comes up to 206 *ajjh*. But no more than the 1st *kahā* of the 1st *vagga* (247a) was completed. With names and places changed it serves as a cliché for the whole remaining part (250b) Having heard Pāsa's sermon, Kālī takes the vows with a certain nun, Pupphacūlā, as her superior. But she cannot bring herself to desist from tending her body as she is demanded to do, and so she goes her own way. Hence she is not granted salvation, and since her self-castigation fails to reach the full mark she is reborn as the goddess Kālī When as such she approaches Mahāvīra respectfully, he gives Goyama an account of her past and her future.

Comm. Vrtti by Abhayadeva —*Ed* (along with the vrtti) AS 6, C 1877.—Āg. S, Bo. 1919.—Paul STEINTHAL, Specimen der Nāyādhammakahā (Thesis) Berlin 1881. The text goes on up to fol 52a of the Āg S-ed Notes and glossary have been added—Nāyas 1, 16 and 14 were treated by LEUMANN VI OC III, 2 p. 539 ff; all the Nāyas by W. HÜTTEMANN, Die Jnāta-Erzählungen im sechsten Anga... (Thesis) Strassburg 1907.

7 *Uvāsagadasāo* 10 *ajjhayana* concerning pious laymen in Mahāvīra's time In the title we should expect *dasā*, comp. the next Anga 1 Ānanda and his wife take the Minor vows. Mahāvīra speaks about the principal offences against the same. He further says that even laymen can obtain *ohi-nāna*. 2 A god

tries to intimidate Kāmakesa, but fails. 3. Culanīpiyā does not allow his meditations being disturbed though a god kills his three sons, but he drives away the ogre who threatens his mother. Yet he ought not to have interrupted his meditation. 4. 5. The same about Surādeva and Cullasayaga with the only difference that it is their health and property (resp.) that are endangered. 6. Kundakoliya defends his creed against a god who is an adherent of Gosāla. 7. Both Mahāvīra and Gosāla vie with each other in winning the Ājīviya Saddālaputta and his wife. The latter is threatened by a god as was the mother of Culanīpiyā. 8. Mahāsaga when fasting refuses to be seduced by his wife and prophesies her death and subsequent abode in hell. His fault was, so says Mahāvīra, that he gave her a reply at all. 9. 10 are repetitions of 1 with the names of Nandinīpiyā and Sālihīpiyā.

Comm. Vivarana by Abhayadeva.—Ed. (all along with the Viv.): ĀS 7, C. 1977.—Āg. S., Bo. 1919.—Bo. 1895.—The Uvās. or the religious profession of an Uvāsaga. . . ed. (Vol. 2. trans.) by A. F. Rudolf HOERNLE. (Bibliotheca Indica.) Cl. 1888-90. Rev. by LEUMANN WZKM 3, 329-350; GRIERSON IA 16, 78-80; revised ed. by P. L. VAIDYA, Poona 1930, rev. by the AUTHOR, OLZ 1931, 1082 ff.

8. *Antagaḍadasāo* Legends partly dating from the time of Aritthanemi and dealing with individuals who “put an end to existence” (though this does not apply to the first story). *dasāo* in the title rightly (comp. Anga 7) means groups of 10, as are formed by 4 chapters out of 8. The chapters are called *vagga* and contain original legends (I-VIII) and such running parallel to them, but the former have been distributed unequally among the *vagga*. As to disposition and contents the Antag. are closely related to Anga 9. In the time of Thāna 506a, where the chapters of both Angas are enumerated, the contents were quite different ¹

1. (I) Aritthanemi induces Prince Goyama to take the Great Vows 9 parallels with other names. 2. 8 (the colophon says: 10) parallels to 1. 3. 7 parallels.—(II) Gaya-Sukumāla, a son of

1. See the AUTHOR, Worte, p. 6f.

Queen Devaī, renounces dignity and marriage and becomes a monk under Ar. Somīla, the father of his bride, brings him to death and himself dies on the flight.—5 parallels to 1. 4 10 parallels to 1. 5. (III) King Kanha Vāsudeva advises the inhabitants of his town Bāravaī which, as prophesied by Ar., will be destroyed, to take the vows and induces his wife, Queen Paumāvaī, to do the same. 9 parallels to Paumāvaī. 6. (IV) Makāi enters the order and practises asceticism, parallel to Gangadatta Viy 16, 5, 1 1 parallel.—(V) The gardener Ajjunaga, obsessed by the god Moggarapāni and thus caused to do much evil, gets rid of him thanks to the layman Sudamsaṇa and becomes a member of the order.—11 parallels. (VI) Prince Amutta (comp. Viy 5, 4) does the same when being led to Mahāvīra by Goyama.—(VII) The renunciation of King Alakkha, parallel to Udāyana Viy. 13, 6 7. 13 queens like Paumāvaī. 8. (VIII) The great fasts of the nun Kāli who previously had been a queen —9. parallels to different fasts.

Comm. Vrtti by Abhayadeva.—*Ed.* (along with the vrtti): ĀS (along with Anga 9), C. 1875.—Āg. S (along with Angas 9 and 11), Bo. 1920 —Along with transl. in Hindi, Lahore 1917.—(Along with A 9:) ed with introd, gloss., notes and an app by P. L. VAIDYA, Poona 1932.—*Transl*: (and the Anutt) transl by L. D. BARNETT, Lo. 1907. Rev. by LEUMANN, JRAS 1907, p. 1078 ff.

9 *Anuttarovavāiyadasāo*. Legends of persons who were reborn in the uppermost heavens 3 vagga of which the first and the third, in correspondence with the title of the whole (comp. Anga 8), have been filled up to 10 *ajjhayana*. We have but 2 original pieces. 1. vagga Jāli with 9 parallels 2. 13 further parallels 3. Dhanna, who was the most successful among Mahāvīra's 14,000 adherents. 9 parallels Comp. Anga 8.

Comm.: Vrtti by Abhayadeva.—For *Ed.* see Anga 8. The text also Bo. 1914 and in BARNETT, see Anga 8 (with transl.).

10 *Panhāvāgaranām*. The title means "questions and explanations" (comp Anga 6), but it is justified neither by the contents nor by the survey given Thān. 506a. We have a loquacious and comparatively modern treatise in prose mixed with

Vedhas about the 5 Great Sins and their consequences on the one hand (*dāra* 1-5) and the 5 Great Renunciations on the other (*dāra* 6-10). 5 *ahamma-* or *anhaya-d.* (*pāna-vaha* etc.) and 5 *saṃvara-d.* (*ahimsā* etc.) the latter are followed by five times five *bhāvanā*o, partly differing from those given in Cūlā 5 of the Āyāra.

Comm.: Vrtti by Abhayadeva.—*Ed.*: C. 1877 and Bo. 1919.—Amulyachandra SEN, - A critical introd. to the P. (Thesis), Hamburg 1936.

11. *Vivāgasuya*. 2 *suyakkhandha*. Thān. 10 calls this Anga Kammavivāgadasāo, thus indicating that there were 10 chapters relating to the consequences of Karman which, generally, are expected to be evil ones. It seems that the resp. chapters correspond almost precisely with those we have before us. Later there were other 10 chapters added in order to show the reward for meritorious doings. But, nearly as poor as in Nāyādh. 2, etc., we find but one story with 9 parallels.

1. Duhavivāgā. Mahāvīra tells Goyama about the previous existence of somebody miserable and briefly prophesies his future lives. We learn that 1. Mīyāputta a cripple, had once been Ekkāi, an unjust governor; 2. Ujjhiya, an evil-doer, has been Gottāsa, who had slaughtered cows; 3. Vijaya, a brigand, had once been Ninnaya, who had bought and sold eggs; 4. a certain Sagada had lived as Channiya, who was a venison dealer and a cook; 5. Bahassaidatta, a purohita, had once been Mahesaradatta, a child murderer; 6. Prince Nandisena (in the beginning Nandivaddhaṇa), the police-master Dujjohaṇa; 7. Umbaradatta, now suffering from a severe illness, had once been Dhammantari, a cruel surgeon; 8. Soriyadatta, a fisherman who is suffering from an incurable disease, had once been Sirī, a woman master-cook; 9. the tortured Devadattā, King Sīhasena who burned his wives alive; 10. Amju, now dangerously ill, had once been the courtesan Puḍhavisirī. 2. Suhavivāgā. Prince Subāhu, a layman, had been hospitable towards the pious Sudatta when once he had been a certain Samūha. 2-10 are parallel to 1.

Comm.: Vrtti by Abhayadeva.—*Ed.* (along with the

vr̥tti) ĀS 11, C 1877. Āg S. see Anga 8 —MKJMM 10, c. 1920 —*Ed* with introd and notes by P. L. VAIDYA, Poona 1933, 2nd ed 1935.—1, 1 (Miyāputta) with transl. in BANARSI DAS JAIN, *Ardha-Māgadhī Reader*, Lahore 1923

The Uvangas

§ 47 Uvangas 1-3. 1. *Uvatāya* (this, not *Ova-*, is the true old name) Two parts not numbered of which the second gives the name to the whole Uvanga. The first part calls itself *Samosarana* and describes the preparations made for the approach of Mahāvira and the sermon he is going to deliver in the presence of King Kūmiya near the town of Campā. This extensive description in vedha metre appearing in so-called *tarrega* has provided the model for many canonical texts, including Angas 8 and 9 where they are indicated merely by catchwords. The second part deals with reincarnation (*uratāya*) and salvation as the reward for certain actions and principles (the story of Ambada and Dadhapinnā), describes the *leśaḥ-samucchāya* (§ 89), the entrance into Nirvāna (an interpolation), the physical conditions necessary for it, and the abode of the Siddhas. All this, with a few exceptions, is told as being a reply of Mahāvira to a question of Goyamā. The Uvatāya, accordingly, is of a very composite nature.

Comm. Vrtti by Abhayadeva.—*Ed* (along with the Vrtti): Ās 12, C 1880 —Āg. S, Bo. 1916.—Das *Aupapātika-Sūtra*, 1. Teil (the only one published). Von Ernst LEUMANN. Introd with extensive summary of contents, text and glossary. Leipzig 1883. Rev.. H JACOBI, *Literatur-Blatt f. d. orient. Philologie*, 2, 46-49 —Transl. of a number of §§ in Antagada, see Anga 8

2. *Rāyapāsenaiyya* The Sanskrit name of Rajaprasnī seems to reflect the original title which may have been that of Rāyapāsinīya, i.e. "the questions of the king" LEUMANN contents that the name of King Pāsenai (Prasenajit) influenced the title,

1 The AUTHOR, *Worte*, p. 3 ff

2 Thus tradition wrongly has it instead of *aupapādika*

for it is he who appears in the Buddhist version of the Paesī story which in this Jain text we have before us. Pasenāi once possibly was a figure in that story. We find him Tḥān. 280 a.

The god Sūriyābha pays homage to Mahāvīra who gives Gōyama a description of his abode and his glory and then of his previous existence as King Paesī. Citta, his charioteer, brings him to Kesi, a disciple of Pārśva's, who in a discourse persuades him to become a layman. He is poisoned by his wife, Queen Dhāriṇī, who feels neglected by him, and he will be reborn as Dadhapaṇṇa (see Uvavāya). The discourse mentioned concerns the existence of a soul different from the body Kesi denies this to be so, but Paesī affirms it and, moreover, says that the soul is invisible and invariably of the size of the body it dwells in.

Comm : Vrtti by Abhayadeva —*Ed.* (along with the Vrtti). AS 13, C. 1880, Āg. S, Bo 1925 —The Rāyap. was treated exhaustively by LEUMANN, VIth OC III, 2, p. 490 ff.

3. *Jivābhigama* In the introduction and at the end the work calls itself *Jivājivābhigama*, i.e. "Classification of Animate and Inanimate Objects", though it treats no more than the first category. The originators are said to have been the *therā bhagavanto* who obediently complied with what the Lord had meant and taught. This is not in harmony with the conventional form of question and reply as mostly found in the text. It has 2 times 9 *paḍavattī* "meanings" (8a, 463a) where in a non-polemic manner it is being said how some (*ege*) classify the beings from two-up to tenfold. In the Colophon there is no reference made to *paḍavattī*. As to major and minor interpolations see below.

I. Beings in the Samsāra are either immovable or movable (=2). II. female, male and neuter beings (=3) III. Hell-beings (H), animals (A), human beings (M), and gods (G) the latter in 2 *veṇāṇiya-uddesa* (=4) IV Beings with one up to five senses (=5). V Earth-, water-, fire-, wind-beings, plants, and animals (=6) VI. H (without sexual differences) and AMG both female and male (=7). VII HAMG in the first and the last moments of their existence as such (=8) VIII Beings with one sense (=5) and those with two up to five senses (=4) IX. Beings with one up to five senses as in VII (=10).—The following

divisions are no longer confined to the Samsāra, but include the Siddhas. I'. Beings in the Samsāra and above it having organs of sense, body, activity (*joga*), etc. etc., and such having not (=2). II'. Beings capable of believing limited (*paritta*), developed, fine, having the inner sense, capable of salvation, and movable, or either representing the opposite or being subjected to a third condition (=3). III'. Activity, sex. belief, self-control in beings (=4). IV'. HAMG plus Siddhas (=5), or the same five having and not having the 4 passions. V'. Beings having and not having the five senses or the five bodies (=6). VI'. Four elementary beings, plants, movable beings (=AHG) and Siddhas (=7), or beings having and not having the *lesa* (=6+1) VII'. Beings in possession of the five kinds of right and the three kinds of wrong cognition (=8). Beings as in VI plus the Siddhas (=8). VIII'. A¹⁻⁴, (A⁵.) HAMG plus the Siddhas (=9). The same as in VII (=9). IX'. Beings as in VIII plus the Siddhas (=10). Beings as in VII plus the Siddhas of the two kinds (=10).

Thān. 126a, 205a says that, apart from the Canda-, Sūra- and Jambuddivapannatti¹ the Dīvasāgarapannatti, too, had an independent existence. But we only know it as being an interpolation in the Jīv. where it begins right in the middle of the discussion concerning the star-gods in III (176a). It closes (373a) with the words *dīva-samuddā samattā*, and we find no sections² as is equally the case in Jīv. and Jambudd. (§ 48). For the relation between the latter and the Dīvas. see below. As indicated by the title, the contents—in question and reply—refer to the ring-continent and oceans. But the description opens with the Jambuddīva. A summary of the Dīvas. is the Dīvasāgarapannatti-samgahanī, 223 Gr, as we are informed by the Jainagranthāvalī p. 64, the latter counting it among the Painṇa.³

1. For this sequence see LEUMANN, Übersicht 21 b

2. Only the Comm has *iti Mandaroddesakāh samāptāh* at the end of the chapter describing the Lavana ocean, 326 b

3. The Vihimaggappavā (WEBER, Verz II, 876) wrongly names the Painṇa Dīvasāgarapannatti,

The Divas. are followed (373b-375b) by some small interpolations merely interconnected by the word of *poggala* applied in various meanings. After them the star-gods begin anew.

Comm. Tīkā by Malayagiri, but making no difference between Jiv. and Divas —Ed. (along with the Tīkā). ĀS, Ahmedabad 1883.—Āg. S, Bo. 1919.

§48. Uvangas 4-7. 4. *Pannavaṇā*, frequently with the addition of *bhagavaī* as found with several Angas. A systematic treatise in the common shape of question and reply, based upon the preparatory work of Ajja Sāma¹ as indicated by Gāhās 3 and 4 (out of 9 preceding the text). There we learn that Ajja Sāma was the 23rd *dhīra-purisa* in the *vāyaga-vaṃsa*, and in Gāhā 5 we are told that the text applied for teaching is qualified as *Ditthvāya-nisanda*. The subject-matter is divided among 36 *payas*.

1. Lifeless as well as living things with all their subsections can be the object of "proclamation". 2 Tḥānā The places where beings reside. 3 Bahuvattavvaya. 27 dāra for indicating the relative number of the beings, i.e. place, kind and sex, one-sensed up to five-sensed, one-sensed only (5), activity, sex, passions, *lesā*, standpoint (10), cognition, creed, self-control, distinct spiritual function, taking in of matter (15), speech, individual body, development, fineness, power of reason (20), aptitude for salvation, fundamental facts, place as last or not last, number in the 3 worlds (25), binding and other qualities, number of *poggala* in the 3 worlds, total number of beings 4. Tḥū. Duration of life. 5 Visesa. Conditions (*pajjava*) of living and lifeless objects 6. Vakkantī Reincarnation (7 dāra). 7 Ūsāsa. Breathing. 8 Sannā. 10 directions of consciousness 9 Jonī 4 times 3 kinds of places of origin 10. Carama. Objects as being relatively last and not last and their relative numbers. 11 Bhāsā. Speech. 12. Sarīra The 5 bodies as to their being inhabited either now or previously (*baddhellaga* or *mukkellaga*) 13 Parināma. 10 kinds of changes in living and lifeless substances. 14 Kasāya. The 4 passions. 15. Indriya The senses, in 2 *uddesa* In the first *udd.* a few peculiarities 2 16. Paoga. 15 applications of inner sense, speech, and

Embodiment and sexuality (with the gods). 35. *Veyanā*. 3 kinds of sensation, four more, three times three more, two times two more. 36 *Samugghāya*. The 7 kinds of explosive annihilation.

Comm · *Tikā* by Malayagiri — *Ed* (along with the *Tikā*): *ĀS*, Ben 1884 — *Āg.S.*, Bo. 1918-19.

5. *Sūrapannatti* The physics of the sky, though chiefly concerned with the activity and the effects of the sun and the moon In the opening passages we have the usual legendary introduction of Goyama's questions directed to Mahāvīra, but later on either personality disappears completely, and both question and reply are impersonal¹ The question invariably has *tā kahaṃ te . . āhite 'ti vadejjā* with the word of *tā* invariably introducing a sentence This style is peculiar for the *Sūrap*. With the *Jiv.* the *Sūrap.* shares the usage of *ege* in all chapters with the only exception of the main portion of the 10th. These *ege* following one after the other produce their *paḍivatti*, but, finally, the true teaching is brought up against them all (*vayaṃ puna evaṃ vayāmo*), a method reminding us of the *Kautaliya* The *Sūrap.* has 20 *pāhuḍa*, each subdivided into *pāhuḍapāhuḍa*, - and

1. *Saman'sāuno* 846 ff is most exceptional

in 10, 1 we have a *vatthu*, all this being equally reported of the *Diṭṭhivāya*. The individual *pāhuḍa* bear no names, but instead there are catchwords in the introductory śloka. The contents were rendered by WEBER, Ind. Stud. 10, 254ff. (1868), THIBAUT JASB 40, 107 ff, comp. also his "Astronomie" in the Grundriss p. 20ff., 29.¹ It may be mentioned that these descriptions are based not so much on the text itself but on Malayagiri's commentary.

1. The narrower and wider circles (*maṇḍala*) formed by the 2 suns around Mount Meru according to the seasons. 8 p.-pāh., of which the 4th, 5th, 6th, and 8th have 3 up to 8 *paḍivatti*. Possibly this *pāhuḍa* is the Mandalappavesa in the list of *anga-bāhira* texts (§ 40). 2. The horizontal way of either sun through the quarters of the compass (8 *paḍ.*), their transition from one circle over to the next (2 *paḍ.*), the distance covered by one sun during 1 *muhutta* (4 *paḍ.*). 3. The range illuminated by both sun and moon (12 *paḍ.*). 4. The figure (*saṃthu*) formed by the bright light (*seyā*) of both suns and moons above the earth and upon it (12 *paḍ.* each, of which the first is accepted). 5. The atoms of the Mandara (sic) are impervious (*paḍiḥananti*) to the light of the sun (20 *paḍ.* exclusively due to the 20 names of the Mandara). 6. The time in which the power of the sun's rays remains constant (25 *paḍ.* according to the resp. time measured). 7=5, only *varayanti* instead of *paḍiḥananti* (20 *paḍ.*). 8. The course of the sun in relation to day, night and other earthly time measures (*udaya-saṃthu*) (3 *paḍ.*). 9. How the earth-temperature is effected by the sun (3 *paḍ.*).² The length of the shadow (*porasicchāyā*) depends on the height and the light of the sun (25, 2, and 96 *paḍ.*, the latter on the ground of opinions that the shadow has the length of 1, 2 up to 96 *porisī*. The truth is that in the first and the last moment of the day it measures 59 *por.* and a fraction). The shadow has 25 names according to shape

1. To be exact we will not pass over SHAMA SHASTRY QJMythic Soc 15, 138-147; 16, 201-212 under the misleading title of "A brief Translation. . .".

2. The introductory question is missing. Instead we find the one leading up to the next subject.

and angle. Possibly this 9th *pāhuḍa* is the Porisimandala listed among the *anga-bāhura* texts.

In the 10th *pāhuḍa* and in most of the following it is no longer the sun but the moon and the stars that are dominant. We, therefore, venture to assume that it was here where the *Candapannatti*, the so-called 7th Uvanga, came in. All we know of it from manuscripts apart from differences in spelling is identical with the *Sūrapannatti*.¹ Pāh 10 has 22 *p-pāhuḍa*. They contain the list (*āvaliyā*) of the 28 nakṣatras (5 *paḍ*) according to its beginning and end, the duration of their conjunction (*joga*) with the moon; the portions (*bhāga*) of day or night when the conjunction starts; the moment when it starts; (5.) the narrower or wider relationship (*kula*, *uvakula*, *kulōvakula*) of the nakṣatras with the months; the days of full and new moon in their relation to the *kula*, etc.; the shape (*saṃthū*) of every individual nakṣatra, the number of their stars (*tār'agga*), (10). the nakṣatras as guides (*nelā*)² of the months and as the measures of the shadow casted in them by the sun; the position of the nakṣatras to the course of the moon (*canda-magga*) and the orbit of the moon during 15 days (*c-maṇḍala*); void of n. or not, the gods of the nakṣatras (*Bambha-devayā*, *Vinhu-d*, etc.), the names of the 30 *muḥurta*, the names of the 15 days and nights of a half-month; (15.) the 5 names recurring three times, of the 15 *tithis* and their nights, the gotras, of the n. (*Moggallāyāna*, *Saṅkhāyana*, etc.); the food conducive to trade affairs under a certain n.; the frequency of a conjunction of a n. with moon and sun (*canda-cāra* and *ācca-c.*) in the course of the 5 years' Yuga, the names of the 12 months; (20) the 5 kinds of years and their sub-species; the gates of the nakṣatras (*jaisassa dārā*), 7 of each opening into a cardinal direction (5 *paḍ*); and, finally (*nakkhatta-vijaya*) the duplicity of sun, moon, and n, their junction with the 62 full moon-and new moon-days in one Yuga, the coincidence of the movements of the 2 moons, 2 suns, etc 11 The beginning of each of the 5 years of a Yuga. 12. The 5 kinds of years forming the sub-species of one of the 5

1 Malayagiri's quotation from the Candap Sthān 415a=Sūrap. 173b

2 Comp JACOBI ZDMG 74, 258

years treated in 10, 20; the 6 seasons, the *amaratta* and 6 *airatta*, i.e. missing and surplus days; the 5 solstices in a Yuga in their relation to naksattra and moon, the tenfold joga. 13. Both the waxing and the waning of the moon, full and new moon, the circles formed by her movement. 14. The bright and dark halves of the month (*dosinā-pakkha* and *andhakāra-p.*). 15. The velocity of moon, sun, planets, naksattras, stars, both relative and absolute. Circles formed by moon and sun both during 1 day and 1 month. 16. *canda-lessā* and *dosinā*, *sūra-l.* and *āyapa*, *andhakāra* and *chāyā* are homonymous pairs. 17. For the change of existence (*cayanōvavāya*) of the gods embodied in moons and suns there is no fixed time (25 *paḍ.* as in *pāh.* 6), but each of these gods is bound to live his or her time as destined by his or her Karman. 18. The altitude of the stars¹ above the earth (§ 126) (25 *paḍ.*) though this altitude does not concern the moral level of their resp. gods. Their attendance and the latter's distance from the Mandara. The innermost, outermost, topmost and lowest naksattra relative to the Jambuddīva (Abhi, Mūla, Sāi, Bharanī): The shape, the size, and the tractive power (*vimāna*) of the star-gods. The velocity of the stars (as in 15), their power (*iddhi*), their mutual distance, their princely life, their duration, their relative number. 19. The number (12 *paḍ.*) of the stars above the human world, with 40 Gāhās mentioning Rāhu as the originator of the moon's waxing and waning, their normal course, their shape, the vacancy of a seat. The fixed stars beyond the human world. The remote ring-continents and -oceans, and the stars above them. 20. Moons and suns are powerful gods (2 *paḍ.*), and so is Rāhu (2 *paḍ.*); his 15 names, his *vimāṇa*, his doings, his twin character as *dhuva-R* and *pavva-R*. The names of *sasī* and *āicca* of moon and sun, their princely life. The 88 *mahaggaha*.

Comm.: Tīkā by Malayagiri.—*Ed.* (along with the Tīkā); Āg. S., Bo. 1919.—J. F. KOHL, *Die Sūryaprajñapti. Versuch einer Textgeschichte*. Stuttgart 1937. Rev. by the AUTHOR, OLZ 1938, col. 562f. .

6. *Jambuddīvapaṇṇatti*. A description of the Jambuddīva,

1. This includes both the moon and the sun.

the centre of the physical universe In the Divasāgarap. (§ 47) we have portions describing the Jambuddīva in the same words, and KIRFEL (Z I I 3, 50ff) was right in inferring that once both texts formed a whole and that, when they were disjoined, the position of the Jambudd. were repeated in the Dīvas. for the purpose of acting as a fundament and a starting-point. The usual costume of question and reply was dropped altogether in the continuous portions; as in the Jīv. there are no sections, but the comm has 7 *vaksaskāra*, an expression occurring in the cosmography (§ 115) only.

I. The Jambuddīva in general, its enclosure with the gates therein. The continent of Bharaha. II. The division of time in Bharaha, the conditions of life in its different epochs *susama-susamā*, etc. (§ 120). The life of the 1st Tīthagara Usabha during the *susama-dūsamā*, etc. mostly in correspondence with Jinac. 204-228 The solemn cremation of his corpse III. Here a *Bharahacakkīcarīya* is inserted with the intention of showing how King Bharaha came to rule over the world thus giving the *Bharaha vāsa* its name¹ IV. The remaining continents of the Jambuddīva and the "benches" separating them. V. How the gods honour a new-born future Tīthagara by solemn ceremonies (§ 15) VI A brief statistic survey of the geographical details of Jambuddīva (*Eravaya* here stands for *Erāv.*), continued at the end of the work, and here followed by VII, an astronomical section. In its contents (though not in its style) it frequently corresponds with the Sūrap, especially so with Sūrap. 18, 19. and parts of 10. New subjects dealt with are. visibility, presence and temperature of the suns (458b=Viy. 392a), circles of the nakṣatras (474a), sun and moon with ref. to Viy. 5, 1 and 10 (480a), the *karāṇa*, the beginnings of the year, the half-year, the months, etc., the mutual distance of the stars (531 b). The statistic survey now proceeds in giving dates regarding the Tīthagaras, the Emperors etc and their state-jewels in Jambuddīva, as well as the latter's dimensions, eternity, duration, contents, and names. Ending up in the legendary frame with which I had been opened.

7. *Candapannatti*. This work is contained in all lists of the Siddhānta and in the older ones (e.g. Thān. 126a) it marches at the head of the three *pannatti*, comp. LEUMANN, Übersicht p. 26 b ff. But we have reason to assume that it is embodied in the Sūrapannatti, s. a.

§49. Uvanga 8-12 form 1 *suyakkhandha* called after the first of its 5 *vagga*. There are relations of these texts to Angas 6 and 8, comp. the AUTHOR, Worte p. 7 ff. where it is being suggested that it was they that first had been called Uvanga.

Comm.: Vivarana by Candra Sūri (Śrīcandra).—*Ed.* (along with the Vivarana). ĀS 19-23, Ben. 1885,—Āg. Ś., Bo. 1922 Ed. Dānavijaya, Ahm. 1922.—With Introd., Gloss., Notes and Appendices by P. L. VAIDYA Poona 1932.

8. *Nirayāvalyaṇḍo*. 10 *ajjhayana*. 1. Kālī, a wife of King Seniya residing at Rāyagiha, is informed by Mahāvīra that her son Kāla who with his stepbrother Kūṇiya went to war, will fall in the battle and be reborn in one of the hells. Asked by Goyama, Mahāvīra tells him how this war came to pass. Cellanā, Seniya's first wife, had felt a *dohaḍa* to eat flesh of her husband, a *dohaḍa* which apparently was satisfied by a trick of her stepbrother Abhaya. She now fears evil consequences for the dynasty from the part of her child and wishes to remove it, but she does not succeed in doing so. Indeed Kūṇiya, scarcely having grown up, puts his father into prison. Cellanā, however, makes him understand that when she had exposed him it had been Seniya who had saved him, whereupon Kūṇiya hurries to release his father. Tragically enough, Seniya, in the wrong belief that his son comes to execute him, commits suicide. Now Kūṇiya, as a king, resides at Campā. Soon after he comes to quarrel with Vehalla, his genuine brother, about some precious objects in Vehalla's possession. V. seeks refuge with his grandfather Cedaga, king of Vesālī, who refuses to surrender him to his pursuer, and Kūṇiya in company with his ten stepbrothers, including Kāla, starts war.—2-10. The same story with reference to Kāla's nine brothers Sukāla. etc.

Separate edition: Nirayāvaliyāsuttam, een upāṅga der Jaina's. Met inleid., aantek., en glossaar. Van Dr. S. WARREN. Amsterdam 1879. Rev. by JACOBI ZDMG 34, 178 ff.

9. *Kappavaḍḍṣīyāo*. 10 *ajjhayaṇa*. 1. Pauma, son of Kāla (s a.) and Paumāvāī, becomes a monk (as did Mahabbala, Vīy. 11, 11, 1) against his parents' resistance. He is reborn in the Sohamma kappā (hence the title) and will attain mokṣa later —2-10 have the same story with reference to the sons of Kāla's nine brothers, Sukāla, etc.

10. *Pupphuyāo*. 10 *ajjhayaṇa*. The title derives from story 3. 1. The god Canda goes to pay homage to Mahāvīra (as does Sūriyābha, comp Rāyap.) who when being asked by Goyama gives an account of his pre-existence as a certain Angai of Sāvattthī. He is converted by Pāsa and dies from fasting, is reborn as a god and will find salvation in the near future. 2 and 5-10 are parallels, but in the latter group the converters are the *therā bhagavanto*. As to their frame, 3 and 4 also are parallels, but the corresponding pre-existences are dealt with in greater detail. 3. The Brahman Somila of Vānārasī consults Pāsa (reference to Somila's questions directed to Mahāvīra Vīy. 758a) but does not become converted. He plants trees and decorates the groves with flowers (hence the title of the whole), honours Brahman ascetics and practises asceticism himself. He is finally convinced by a god that the Brahman method is wrong since, after all, he has consulted Pāsa. Somila thereupon allows himself to be converted. 4 Subhaddā, a sterile housewife, on consulting some nuns becomes a lay woman and then a nun herself. As such a one she makes it her hobby to nurse children and to adorn them for their festivities. Though reprimanded for doing so she does not listen and returns home, though still remaining a nun. In her present existence she is a goddess Bahuputtīyā, and in her next life she will be' Somā, the daughter of a Brahman. In the course of 16 years Somā will give birth to 32 children, then she will become a lay woman and a nun; after that she will be reborn to live among gods, and finally she will attain salvation.

1. The text has the past tense.

11. *Pupphacūlāo*. 10 *ajjhayaṇa*. 1. The goddess Sirī going on a pilgrimage in order to pay homage to Mahāvira had been Bhūyā converted by Pāsa in her pre-existence. One day she is reprimanded by her lady superior for having thoroughly washed her body, but yet she repeats doing so. That lady is called *Pupphacūlāo ajjāo* (comp. Nāy. II 1). The duration of Bhūyā's existence and her *moksa* are consonant with 2—10 except the name of the goddess.

12. *Vaṇhudasāo*. Not "ten" *ajjhayaṇa*, but 12. 1. Prince Nisadha, son of King Baladeva and his wife Revai of Bāravaī, was converted to laymanship by Aritthanemi. When being asked by Varadatta, one of A.'s disciples for the reason of N.'s bodily perfection, Aritthanemi gives an account of N.'s pre-existence as Prince Vīrangaya who was converted by a master called *Siddhantā nāmaṃ āyariyā*. N. later becomes a member of the order; after his death he will be reborn as a god, and, finally, he will gain salvation. 2-12 are of the same tenor, but the princes are called differently. They all belong to the same dynasty of the (Andhaka-) Vrsni (comp. Nandī 418f.), whence the title of the text.

The Painṇas

§50. The number of the Painṇas varies, but, as mentioned in § 40, we find a central group or core. It consists of 10 of them. Since these have no standard order we are justified to deal with them in an order suitable to their contents. There will be added a few works that surround the centre group in a wider circle.

Editions: Dasapayannā mūla sūtra. Ben. 1886, containing: Tand, Dev., Ganiv., Caus., Samth., Āurapacc., Bhattap., Mahāpacc., Cand, Maraṇavibhatti.—Payannā samgrah. Bhāg 1. Ahm. s. 1962, containing: Bhattap., Caus., Mahāpacc., Āurapacc., Ārādhanaṇprakarana by Somasūri, Ātmabhāvanā (Guj.) by Buddhisāgara, Paramānandapacīsī (25 Skt.-śl.).—Śrī Caus., Āurapacc., Bhaktapariṇā, Samthāraga. Cār payannāno samgrah. Bh. s. 1966.—Catuhśaran'ādi-Maranasamādhyantam prakīrnaka-daśakam. (Āg. S.) Bo. s. 1983, containing: Caus., Āurapacc., Mahāpacc., Bhattap., Tand., Samth.,

Gacchāyāra, Ganiv., Dev., Maranasamāhi.—Caus. and Āurap. along with other texts, Ahm. s. 1957.—Vividh Payannāvacūri, Jām. 1912.

Five out of the ten disciplinary Painnas mentioned above have been dealt with by VON KAMPTZ.¹ They are partly interrelated with each other and their context has suffered from misconceptions. Here we restrict ourselves to but a few remarks regarding the essential contents.

Causarana “The Recourse to the Four”, i.e. to the Arhats, the Siddhas, the Sādhus, and the Dharma. 63 G. Comm.: Bhuvanatunga Sūri. Avacūri on the Caus. and the subsequent texts by Gunaratna.

Bhattaparinnā. The ritual for the “Renunciation of Food”. 172 G.

Samthāra. “The Death Bed”. Preparations, ritual, legends. 123 G. Comm.: Bhuvanatunga.

Āurapaccakkhāna. “The Renunciation of the Sick” as to all that is evil, his preparation for death. 70 G. along with a formula of confession containing a list of 63 objects.

Mahāpaccakkhāna. “The Greater Renunciation” 141 G. instead of 70. Here we add the *Maranasamāhi* or *Maranavibhatti*, 660 G., with three more in the ed. quoted above. In them the anonymous author appears to confess having used “the Maraṇa-visohi, the Samlehanāsuya, the Bhattap., the Āurapacc., the Mahāpacc., and the Ārāhanāpainna”. The first as well as the second of these texts belong to the *anga-bāhira*.

Candavejjhaya “Hitting the Mark” (*candraka-vedhyaka* = *vedhya-candraka*, Cand 127 ff.; Āurapacc. 54; Samth. 122 *candaga-vijjha*) On monastic discipline, the virtues (*guna*) of a teacher and of a pupil in education (*niggaha*) through discipline, knowledge, practice, and in dying. 171 G., the first of which, since it refers to the Tand., most certainly is out of place here.

Ganuvijjā. “A Ganin’s Knowledge” as to the dates either propitious or not for anything planned in monastic life. 9 *dāra*: natural days, tithis, nakshatras, karanas, days of the planets,

¹ Über die vom Sterbefasten handelnden älteren Painna des Jaina-Kanon (Thesis) Hamburg 1929

muhūrtas, bird-omina, constellations, more omina. 82 v., śl. and G. at equal parts.

Tandulaveyāliya, so called after a calculation (*vicāra*) as to how many grains of rice (*tandula*) a normal individual would consume in the course of 100 (years) times 360 (days) times 30 (hours) times: 3773 (breaths). (They would fill 22 1/2 *vaha*.). A jumble of prose, G. and śl. of varying origin. Embryology, the human stages of life, the duration of life in remote times (including a description as to the bodies of Arhats, Cakravartins, etc.) and nowadays when the maximum age comes upto not more than 100 years (s. a.). Measures of capacity and of time. The parts of the body, the quantity of fluids contained by a human being, the body as an impure mass. A contemptuous description of the mothers, mostly laid down in comparisons and etymologies.

Ed. s.a. The text along with Vijayavimala's Vrtti and the Caus. DLJP 59, Bo. 1922.—The text with transl. in Guj. by HĪRĀLĀL Hamsraj. Jāmnagar without year.

Devindatthaya. A layman commencing to praise (*thaya*) Vardhamāna (Mahāvīra) is interrupted by his wife the moment he mentions the *devinda*, the woman asking him to explain the meaning of the word to her. By way of personal information he systematically treats the 20+16+12 Bhavana-vāsī, Vānamantara, Joisiya, and Vemāniya kings as to their seats, duration of their lives and faculties, moreover reporting on the Vemāniyas also as to their size, sexuality, etc. 302 G.

Vīratthaya. A stotra of Mahāvīra whose various names are listed in 43 G.

As to the *Titthogālī* and the *Ārāhanāpaḍāgā* which occasionally appear among the Pannas the AUTHOR has come to know them through manuscripts as abstracts of the entire teaching (1233 G. and 930 G.).

The Cheyasuttas

§51. *Āyāradasāo*, abbreviated to *Dasāo*, Skt. *Daśāśru-taskandha*. 10 *dasā* (Thān. 506a) 1. 20 precipitancies of temper (*asamāhi-tthāna*). 2. 21 offences against the vows (*sabala*). 3. 33 cases of disrespect (*āsāyanā*) on the part of the pupil. 4. 8

requisite qualities of a Gana-leader (*gani-saṃpayā*) and two times four modes as how to gain self-control on the part of a younger. 5. Transcendent cognition is gained by right conduct (*citta-samāhi*), 10 cases. 6. 11 stages of laymanship (*uvāsaya-paḍimā*). 7. 12 stages of monkhood (*bhikkhu-p.*). These 7 *dasā* are ascribed to the *therā bhagavanto* and together with Utt.16 and Dasav.9, 4 they constitute the remains of a code of discipline arranged in the fashion of both Angas 3 and 4.¹ It is only in 6 that we are surprised to come across an exposition of the *kiryā*- and *akiryā-vāi* which is quite out of place here. Prose with the exception of 17 śl. appended to 5. The remaining *dasā* differ completely from the previous ones as well as among themselves

8. This *dasā* ends up in the Pajjosavanākappa (the Sāmāyārī) offering prescriptions for monastic life during the rainy season (§146). In joint connexion with the two texts preceding this code of duties (presently going to be mentioned) this *d.* forms the so-called Kālpasūtra. The first part is the Jinacariya, a lengthy account of Mahāvīra's birth and life rendered in many Vedhas owing to which the text has come to serve as a model as does the Samosarana (§ 47). At the very end a date, see § 39. Then there follow the biographies of the preceding 23 Jinas, but in a much shorter and stereotype way. The second part is the Therāvalī, a list of the immediate disciples of Mahāvīra's and of the patriarchs following them, of affiliations and schools. In many cases the names appear in Gāhās, and we equally find them in the concluding part. At the end of this chronology we have Devarddhī (§ 39) from which we infer that those lists were started in his time or else soon after. Thus in the Kālpasūtra there are rather disparate portions probably due to the fact that it was intended to prove that both teaching and custom went back to very remote days.² From tradition³ we understand that the K. was recited before a King Dhruvasena in order to comfort him for the loss of his son 9 39 *moha-tthāna* to show that illusion (*moha*) results in evil deeds 39 śl. which in a legendary

1 The AUTHOR, Worte p 9 ff.

2 The AUTHOR, Worte p 12 ff

3 JACOBI's ed p 114 ff; SBE 22, 270

introduction are attributed to Mahāvīra. 10. Āyāitthāna. The splendid show presented by King Seniya and his Queen Cellanā and their retinue arouse a *nyāṇa* in the hearts of monks and nuns. Mahāvīra defeats it by means of 9 analogous examples given as to such ambitions for the future life (*āyāi*) which will have detrimental consequences. Only he who abstains from all desires is certain to reach the end of existence.

Comm. on the Dasāo· Nijjutti, Gunni (printed), Ṭikā by Brahma Muni.—*Ed* : Daśāśrutaskandhasūtram, Lāhaur 1936.—Dasā 8 frequently was commented independently and separately printed. For the 1st ed. by STEVENSON see §1. The Kalpasūtra of Bhadrabāhu ed. with an introd., notes and a glossary by Hermann JACOBI (AKM 7, 1), Leipzig 1879. On p. 25 a survey of the many comm. from the Pajjosavaṇānījuttī onwards. To them we have to add Vinayavijaya's Subodhikā, DLJP 7 and 61, Bo. 1911 and 1923, and ĀGRM 31, Bh. 1915.—The text along with Dharmasāgara's Kiranāvalī ĀGRM 71, s. 1922. The text along with the Kālikācāryakathā DLJP 18, Bo. 1914.—The text, illustrated. Śrī-Kalpasūtram Bārasāsūtram sacitram. DLJP 82, Bo. 1933.—*Transl.* JACOBI in SBE 22, Oxford 1884.

Kappa. 6 *uddesa*. Rules for the lives of monks and nuns. For the composition see the next work. Often styled Brhatkalpa in distinction from the Kalpasūtra mentioned above.

Comm.: Bhāsa by Samghādāsa; Gunni by Pralambasūri (both in 3 recensions); Ṭikā by Malayagiri, completed by Ksemakīrti —*Ed* . Das Kalpasūtra, die alte Sammlung jainistischer Monchsvorschriften. Einl., Text, Anm., Übers, Glossar von Walther SCHUBRING. Kappasuttam (this text in Nāgarī retranscription by Jivraj Ghellabhai DOSHI). (The Sacred Books of the Jains 4.) Ahm. 1911 Kalpa-Vyavahāra-Niśītha-sūtrāṇi (retranscription of SCHUBRING's editions). (Jaina-Sāhitya-Saṁsodhaka-GM) Poona 1923.—Brhatkalpasūtram (along with Nijjutti, Bhāsa and Vrtti). Vavahāra. 10 *uddesa*. Contents as in Kappa. Both K. and Vav have flowed together from different sources. In the

AUTHOR's opinion the original K. contained a collection of what was permitted and proper for monks and nuns (*niggantha* and *-thī*) and what was not, while the original Vav. was the more differentiated codification of both order of rank and subordination and of the proceedings (*vavahāra*) taken against *bhikkhu* and *bhikkhunī* acting contrary to prescripts. Whence it follows that the Vav. rests on the Kappa

Comm.: Bhāsa, Cunni, Tikā (Vivarana) by Malayagiri — *Ed* Vavahāra-and Nisīha-Sutta, by Walther SCHUBRING; Leipzig 1918 Nāgarī retranscription along with Guj. transl, by Jivraj Ghellabhai DOSHI. (The Sacred Books of the Jains.) Ahm. 1925.—Vyavahārasūtram (with Nijjuttī, Bhāsa and Vivarana) 1-10 Bh 1926

Nisīha. 20 *uddesa*. This title appears to be a mixture of *nischa* (interdiction) and *nisīhiyā* (place of study). Udd. 1-19 offer lists of transgressions and their sanctions reaching from 1 to 4 months in which case the punishment either becomes effective immediately and without reduction (*anugghāiya*) or else may be suspended or reduced (*ugghāiya*). Thus the text has two different subjects. A third one refers to additional punishment (*ārovanā*) when previous transgressions have been concealed or new ones were committed. This is treated in the 20th udd (20, 1-20 = Vav 1, 1-20). It is this *udd.* that must be meant when Thān. 325a speaks of the fivefold, and Samav. 47b of the 28fold, Āyārapagappa (though in the latter we have but a few terms not contained in Nis 20) Abhayadeva, it is true, takes the Āy. as being the whole Nis, just as does Malayagiri in his comm. on Vav 3, 3 and 10, 16 f Āv nijj 16, category 28, gets this number by including the threefold Nis. in the Āyārapagappa = Āyāranga. About the Nis once having been an appendix (5th *cūlā*) to the Āyāra (§ 45), as state still reflected in the Āyāranijjuttī, see LEUMANN, Übersicht p 22a.

Comm · Bhāsa; Cunni; Visesa-Nisīhacunni by Jinadāsa, ed by Vijayaprema Sūri. Vol 1-4 Agra 195f-60.—*Ed.* See Vavahāra.

§52. *Mahānsīha*. This "greater Nisīha" is very closely linked with the original one in that part of its 7th section, the

Pacchittasutta, which quotes punishments for various transgressions. This is intended to serve as a legitimation for a pretended old date of the Mahānisiha, and there are some more attempts to this purpose. But the language is degenerated and the tradition defective, as was already seen by the copyist of the archetype.

1. Salluddharana. Confession and contrition, 222 śl. except an introduction in prose. 2. Kammavivāgavivarana, 209 śl, a large centrepiece in prose. There is a close connexion between the Mahānis and the GACCHĀYĀRA since the latter has borrowed nearly one third of its whole from the former, comp the AUTHOR, Mahānis. p 50f. 137 (138) śl. and G Description of the qualities requisite for both a teacher and his Gaccha. Occasionally the G is listed

1 For Nāila and his late successors see LEUMANN Übersicht, p. 28 b

among the Painnas, see § 50.—*Ed* : Gacchācāra-prakīrnaka along with the Vṛtti by Vānara Rsi. Āg S Bo 1913.

Pancakappa The contents can be gathered only from the P. cunni ms. The text originally composed in Gāhās (of which we can see the Pratikas) refers to the system of monkhood by 5 methods according as the kappa is understood to be 6-, 7-, 10-, 20-, and 40-fold. The Pancakappabhāsa (by Saṃghadāsa ?) apparently is of an age younger than that of the Cunni.

Jiyakappa. 103 G. dealing with the 10 kinds of punishment and composed by Jinabhadra whose great fame is likely to have caused the Jiy. to be incorporated in the Cheyasuttas if it is not meant simply to fill the gap caused by the loss of the Pancakappa.

Comm · Cunni by Siddhasena Ganin; Bhāsa (of later origin, see JINAVIJAYA p. 17 f), Cunni-visama-pada-vyākhyā by Śricandra Sūri.—*Ed* · Jinabhadra's Jitakalpa (with extracts from Siddhasena's Cūrnī) by Ernst LEUMANN, SPAW 1892, p 1195-1210 —Śrī-Jinabhadra-Gaṇi-Ksamāśramana-viracitam Jitakalpa-sūtram (along with the complete Cunni and Śricandra's Vyākhyā), ed Muni JINAVIJAYA Jaina-Sāhitya-Saṃśodhaka-GM. 7. Ahm s. 1983.

Nandī and Anuogadārā.

§53. These two texts have no common title as might be expected owing to both being works concerning propaedeutics and both preceding the important group of the Mūlasuttas (see below).

Nandī. The unknown author frequently looks beyond the bars of Jain dogmatics Hence it is likely that the title was taken from the introductory verses of the Brahman drama (§46). The contents are cognition (*nāna*), its means and sources (including a survey of the canonical texts 262a); 23 *namaskāra*-G; G. 24-50 a list of the patriarchs from Suhamma up to Dūsagaṇi, 2 fragments 13 kinds of good and bad pupils indicated by catch-words in one G, and 3 kinds of an audience in 3 G At the end of the N we find an uncommented appendix referring to *anunnā* or the permission to speak, of which there are 6 kinds with altogether 20 names, and, finally, to knowledge by tradition (*śūya*).

No other cognition can be object of teaching. All these items are answers to Goyama's questions.

Comm : Cunṇi by Jinadāsa (printed); Tikā by Malaya-giri.—*Ed* (along with the Tikā) ĀS 45, C 1880—Āg. S. 45, Bo. 1924.—JNĀNASUNDARA, Surat V 2447, (no Tikā).—An Alphabetical Index of the aphorisms etc. occurring in (Nandī, Anuog, Āv, Ogh, Dasav, Pind. and Utt.) along with detailed lists of subjects treated in these seven Āgamas ĀGS 55, Surat 1928.

Anuogadārā(ṃ). Investigations (*anuoga*) into the range of knowledge in general and of Jain dogmatics in particular, starting from four different points of entrance (*dāra*). *Suya* as the object of teaching (closely related to the appendix of the Nandī). This leads on to the *āvassaya-suyakkhandha*. The author's purpose to describe all six of the āvassayas (§ 151) has, however, been materialized only in the first one, the *sāmāya*. Its 4 *anuoga-dārā* (in which the *sāmāya* plays no role whatever) are: approach from without (*uvakkama*, 85b), forming a scheme (*nikkheva*, 250a), penetration (*anugama*, 268a), the modes of expression (*naya*, 264a).

Comm . Cunṇi by Jinadāsa (printed); Vrtti by Hemacandra Maladhārīn —*Ed* (along with the Vrtti) . ĀS 44, C. 1880 —DLJP 31 37, Bo —Āg S, Bo 1924 —Ātmārām Panjābī, Ajmer 1917 (with Hindi transl) —Jinadatta Sūri-Prācīna-Pustakoddhāra Fund, 21, Surat 1921.

The Mūlasuttas

§54. *Uttarajjhāyā* (Uttarajjhayanāim). 36 *ajjhayana*. In Jinac 147 we are told about 36 *aṇuttha-vāgaranāim*, explanations given by Mahāvīra without being asked (by Goyama, etc) to do so. Some old authors who took them for our Utt, explaining *uttarajjhāyā* as "last chapters" taught by the Master, were subjected to an anachronism. It rather seems that the work got its name from a group of apparently younger chapters "following" (*uttara*) the old ones. For, on the whole, the Utt. are an ancient chrestomathy intended for the members of the Order. It might be characterized as a mixed variety of catechisms, parables,

systems composed in Triṣṭubh, śloka and, occasionally, in other old metres, among which the archaic form of the Āryā (in chapter 8, see § 45) has to be mentioned : there is some prose, too. The Subhikkhu chapter Utt. 15 has a parallel of the same name in Dasav. 10. Dogmatics and duties are exposed in the following chapters: 2 Paṇṣahā. 22 kinds of temptations. 16. Bambhacerasamāhittānā, the 10 instructions of chastity (comp. Dasāo) 24 Samūo The 5 *samū* and the 3 *gutti* (§ 173). 26 Sāmāyārī. 10 cases of right conduct Daily duties. 30. Tavamagga. 6 outward and 6 inward austerities. 33. Kammapa-yadi. The nature of Karman, its 8 kinds, etc. 34. Lesāo. The 6 *lesā*. 36 Jīvājīva-vibhatti. The system of both the animate and inanimate world.—31. Caranavihi, 21 śl, may be the text referred to in the *anga-bāhira* list.

Sangli 1933-36.—L. ALSDORF, *vāntam āpātum*, Ind. Linguistics 16, p. 21-28 (concerning Dasav. 2, 7. 8).

§55. *Āvassayanijjuttī*. A Gāhā work taking its name from the 6 *āvassaya*, i.e. the formulae to be recited daily and hence called *āvassaya*, i.e. "indispensable".¹ For a great part the contents, however, go their own ways. The Āv.-nijj being the 1st of 10 *nijjuttīs* written by a scholar traditionally called Bhadrabāhu (Āv. 84 ff. of the Āg. S. ed., comp. § 43) is furnished with an elaborate introduction (*uvagghāya-nijjuttī*).

The prints of the Āv. contain what may be called the Vulgata recension. As was established by LEUMANN,² this recension developed as the last out of four redactions from the original

1. The old text of 1-3 is discussed by LEUMANN, Übersicht p. 6f.

2. Übersicht passim.

work first revised by Sidhasena and then by Jinabhata. Afterwards Jinabhadra wrote an "extensive" Bhāsa; but this Visesāvasāya-bhāsa serves merely the first half of the Nijjuttī.

The manuscripts of the Uvagghāya in the Vulgata recension start by rendering the list of teachers taken from the Nandī (§ 53). The printed edition begins with the theory of cognition based upon the 5 *nāna* and going back to the Nandī as well. These v. 1-79 are no more than an introduction (1. *Pedhiyā*)¹, the *sāmāya* to be dealt with presently being a component part of *suya-nāna*. (2. *Padhamā Varavarīyā*)² (v. 80-242). In the beginning we find "Bhadrabāhu's" programme just mentioned followed by the *Sāmāyanijj*. (from v 87). With respect to the *sāmāya* it is proposed to explain (137 f) *uddesa* instruction, *niddesa* special information, *niggama* origin, *khetta* place, *kāla* time, *purisa* originator, *kārana* cause and further subjects, 26 in all. In *niggama* we meet with Mahāvīra's pre-existences (143), the 7 *kulagara* (148) and the *nīti* they exercised, previous lives of Usabha (167), the Karman that predestined him to become a Tīthagara (176), his young age (182). The same applies to all Tīthagaras (230), the dates of each (up to 337). (3. *Buiyā Varavarīyā*) (v. 243-525). The story of Usabha and his people continued (338) with special reference to his grandson Marīci, a pre-existence of Mahāvīra's. The life of the latter (458) up to when he entered into the *kevala-nāna*. (4). *Uvasaggā* begins with v. 462 and hence is an excursion to 3. (5.) *Samosarana* (v. 526-590). The place where a Tīthagara is going to deliver his sermon the way how it is prepared and how the audience represented by gods, human beings and higher animals is ranged; the sermon itself and the glory of the Tīthagara, the donations of the audience (6). The 11 *ganahara* (v. 591-665). (7.) The tenfold *sāmāyārī* (v 666-827). In it the discussion of the method

¹ The divisions given in brackets, as introduced by WEBER and LEUMANN, have been taken from Malayagiri's comm as far as they appear there. Nothing of it in the verses.

² *varavarīkā* 'var. means proclamation of giving the desired object' (Kapadia p 177, acc to the Cuṇṇī?).

of instruction (*puhatta* and *apuhatta*)¹ leads back to the two patriarchs Ajja-Vaira and Ajja-Rakkhiya the latter having played a rôle in it. Then there follows the description of the 7 schisms (778-788). It seems that LEUMANN, when following WEBER'S counting of 20 sections (which was wrong since WEBER took the *uvagghāya-nijjuttī* as No. 8), attributed No. 8 to the discussion mentioned. The *Uvagghāyanijjuttī* closes with v. 879.

The main portion deals with the 6 āvassaya in their due order preceded by the (9.) *Namokkāra-nijj.* (881-1019),² (10.) *Sāmāya* (1020-1062), (11.) *Cauvisatthaya* (1063-1109), (12.) *Vandanā* (1110-1235), (13.) *Paḍikkamana* (1236-1412), (19.) *Kāussagga* (1413-1549), (20.) *Paccakkhāna* (1550-1617). Section 14 to 18 are excursions into 13. viz: (14.) *Jhānasaya* by Jinabhadra (1-105), (15.) *Paritthāvanīyā-nijjuttī* (1-148) about "leaving aside" animate and inanimate objects, (16.) *Paḍikkamanasamghayanī*, a list of important categories from 6 up to 30, comp. Anga 3, (17.) 32 *joga-saṃgha*, kinds of mental discipline, (1269-1314) and 33 *āsāyaṇā*, see *Āyāradasāo* No. 3, (18.) *Asajjhāya-nijj.* (1315-1412).

In LEUMANN'S words (*Übersicht* p. 296) the whole of the *Āv. nijj.* is a manual of fundamental significance. Thanks to introduction and excursions it is far above the *Nijjuttis* of later composition and rich in legends, myths, anecdotes, allegories and parables, the interpretation of which is left to the commentators since they are presented in the poor shape of catchwords only.

Comm. • *Ḍunnī* (printed), *Ṭikā* by Haribhadra; the same by Malayagiri; *Viśeṣāvassayabhāsa* by Jinabhadra; *Viśeṣāvaśyaka-*

1 This calls for a brief explanation. Research (*aṇuoga*) is concerned with practice (*carana-karaṇaṇuoga*), is homiletic (*dhammakahāṇuoga*), is calculating (*gāṇyaṇuoga*), and speculative (*daviyaṇuoga*), comp. *Dasav. nijj.* 3 (*kāle* to be dropped). Now, if in explaining of one Sūtra all the 4 *aṇ.* are practised, we have "accumulation" (*apuhatta*); if according to contents no more than 1 *aṇ.*, we have "isolation" (*puhatta*), see *Dasav. nijj.* 4 *comm.* and *Āv. nijj.* 762. The Digambaras have the literary divisions of *prathama*-, *karaṇa*-, *dravya*-, and *carana-aṇuyoga*, i.e., world-history, astronomy, philosophy, and ethics, thus indicating a reflex of that old classification.

2 These figures as well as the following have been taken from Māṇikyāśekhara's *Āvaśyakanīryuktīdīpikā* (Bhav. 1929-1941).

tikā by Śilānka; Śisyahitā by Hemacandra Maladhārin.—*Ed.* Āg. S. (along with Haribhadra's Tikā). P. 1-4. Bo. 1916-17. —The same (along with Malayagiri's Tikā). ĀSG No. 56, 60, 85. Bo. 1928-35.—Śrī-Jinabhadra- . . viracitam Viśesāvaśyakabhāsyam (along with Hemacandra's Śisyahitā). YJGM 25, 27, 28, 31, 33, 35, 37, 39. Ben. V. 2427-41.—Sri-Viśesāvaśyaka bhāsāntar (the text along with Guj. trans.). ĀSG 38 (1924). 48 and ff.—Viśesāvaśyakagāthānām akār'ādī-kramah (along with a summary of the contents) Āg. S. Paṇīṣṭa 1, vibhāga 1.2. Bo. 1923.—Extracts from Viśes. in Pradyumna Sūri, Vicārasāraprakarana. Mhesana 1923.—Hemacandra (-Maladhāri)-Sūri-sūtritam Hārībhadrīy' Āvaśyakavrtti-ṭippanakam. DLJP 53, Bo. 1920 —Many modern prints of Āvaśyakasūtra, Sāmāyikasūtra and, especially, Pratikramanasūtra —The old Pakkhiyasutta is based upon the half month's confession (Pākṣikasūtra. Comm. by Yaśodeva, DLJP 4, Bo. (1911)).

Piṇḍanijjuttī. A treatise on food (*piṇḍa*) eaten by a monk composed in 671 G., originally part of the Āyāranijj. where now we have a gap after G. 315'. In 671 Gāhās we learn to know the mistakes made by an almsgiver (*uggama-dosa* 32b), those made by the receiver (*uppāyaṇa-d.* 120a), further we are told of the wrong way of asking for alms (*gahan'esanā-d* 146a) and the wrong way of using them (*ghās'esanā-d.* 170 b), all this in 8 dāra, the last 5 dealing with the fourth item and treated most briefly in 39 Gāhās.

Comm.: Vrtti by Malayagiri and Virācārya.—*Ed.* (along with Malayagiri's Vrtti) DLJP 44, Bo. 1918.

Ohanijjuttī, "a general explanation" given of subjects and activities in monastic life, viz., examination (*paḍilehā* 12b), food (*piṇḍa* 128a), equipment (*uvahī-pamāna* 207 b), how to avoid making mistakes (*anāyayana-vajja* 222b), contravention (*paḍisevanā* 224b), confession (*āloyanā* 225a), and atonement (*visohi* 225 b). In parallel with the Pind. the first four items

take up 1133 G. incl. 322 Bhāsa verses, though at the end the text says to have 1149 Gāhās.

Comm. Bhāsa; Vrtti by Drona¹; Avacūri.—*Ed.*: Āg.S. (along with Bhāsa and Vrtti), Bo. 1919.

§56. We here add those *anga-bāhira* texts which we know to be independent (whereas others, as we have seen above, are preserved as parts of other works).

Isibhāsiyām. Sentences of certain Ṛsis (or Pratyekabuddhas, see below) concerning moral subjects. The style, often dark, reminds us of Āyār., Sūy., and Utt. 45 *ajjhayaṇa* for the equal number of Ṛsis (44 in Samav. 88b. Different other wrong data Thān. 506a and elsewhere).

Comm.: Nijjuttī, not yet recovered, see above.—*Ed.*: Śrīmadbhīḥ pratyekabuddhair bhāsītāni śrī-Rsibhāsitasūtrāṇi, Indaur 1927, with appendix containing 2 Samgahanī along with the names of the Ṛsis and the catchwords.—*Ed.* by Walther SCHUBRING, Nachr. Gött. Ges. d. Wiss. 1942, p. 489-576; 1952, p. 21-52 (with a Sanskrit Chāyā).

Thān. 506b under the general title of Samkheviyadasāo (“Abridged Daśās”) gives the names of ten texts of which the third, fourth and fifth will be found with the following three minor products having a common subject. In considering the contents of the latter it seems rather doubtful that they should be identical with the texts of the Thāna.

Angacūhiyā. Praises the continuous tradition of, and good instruction in, the sacred texts whence the name of “appendix to the Angas” can be derived. Such considerations are caused by the fact that through negligence bad individuals will penetrate into the Order and that, as to their moral character, the monks are no more than lukewarm. This certainly reflects a picture of the conditions prevailing in those days. A centre portion deals with the teachers as such and with practical teaching. It goes parallel with the Āyāravīhi (printed Bo. 1919), but the Sanskrit verses of the same are in Prakrit here.

1. Drona also revised Abhayadeva’s Vrtti on Uvav., see LEUMANN, Aup. S. 19 f

An article by the AUTHOR, following a Berlin ms., in OLZ 1926, 910-913.

Vaggacūliyā, also Vanga-and Uvanga-c The third name is taken from the colophon in order to explain a relation to the preceding work, whereas the style and the contents speak in favour of the first Yet a relation exists in that the Angac. towards its end, i.e. behind the words *sāhūnaṃ hīlanti mamāvi hīlissanti*, refers to the Uvancacūliyā. This "origin of a despite of tradition" is prophesied for the year 1990 after Mahāvīra in the garb of a legend about the 22 lovers (that is, a *vagga*) of a certain courtesan Kāmalayā The style is that of the canonical *vagga-texts* (see above) Angas 8, 9, 11 and Uvargas 8-12 thus equally allowing for a justification of the title.

See the article just mentioned, the following text, and the analysis in Guj by KṢĀNTIVIJAYA in Camatkārisāvacūristo-trasamgrahah, tathā Vancacūliyāsūtrasārāṃśah, Ahm, s 1979

Viyāhacūliyā, wrongly Vivāhacūliyā In this text, too, we meet with a decay of the Jaina Order. For it is with reference to such a decay that 16 dreams of Piyanandanā, wife of Candagutta of Pādālipura, are interpreted by Bhaddabāhu, a disciple of Sambhūyaviṣaya¹. Candagutta resigns the throne to become a layman —There is another Viyāhacūliyā of 8 *uddesa* where in the form of query and answer Mahāvīra teaches Goyama that idolatry will not lead to salvation

Ed (acc to British Museum Cat): Vivāhacūlikā. Ed. with Hindi interpretation and paraphrase by Upādhyāya ĀTMĀRĀMJĪ 2nd ed, Sanjit (Agra) s 1979.—Comp. also Kisorilāl Mu MADĀYTĀ Vivāhacūlikā kī Samālocanā aur Vancacūlikā Sūtra (Ratnaprabhākara-Jnānapuspamālā 72.) Phalodī (Marwar) s 1980 The pamphlet is directed against the Sthānakvāsī or Dhundhiyā (§ 32) The 22 men mentioned above are said to be analogous to as many representatives of the Dh

Angavijjā A compendium of divination through man's limbs This science opens the file of the 8 *mahā-numitta* (1, 2;

¹ In the original (German) edition of this book one line was dropped erroneously in printing

almost identical Ṭhān. 427 a). Its source is said (1, 10) to be the Ditthivāya whence possibly¹ the expression of *adhā-puvvaṃ* (= *Puvvaṃ* ?) which occurs invariably often. The Angav. calls itself *bhagavaī mahā-purisa* (i.e. *Mahāvīra-Vaddhamāṇa*)-*dinnā*. 60 *ajjhāya* in prose and some 4100 śl. (59 f. G.).

1—7 Anguppattī, Jīnasamthava, Sissopakkhāvāna (śl.), Angatthava, Manitthava (comp. 9, 1), Ādhāranā (presuppositions, starting points), Vāgaranopadesa (Disposition and method).

8. Bhūmikamma (Establishment of fundamentals, comp. 8, 2, 3). 30 *paḍala* (1326 śl.). 1.2. Samgrahanī (2: śl.). 3-5. Bh. sattasamuddesa (śl. as in all that follows), Attabhāvaparikkhā, Nemitta-m-upadhāranā. 6-10. Divination through the client's mode of sitting, touching the seat, leaning, and from what is nearest to him. 11-16. Divination through his way of looking, laughing, questioning, saluting, addressing, and approaching. 17-27. The same through utterances of grief, indifference and tenderness; 28.29 through rest and activity. 30. Bh. gunavibhāsā.

9. Angamanī (acc. to p. 57, 10=*angāvijjā-manī*). Praise of the Manisutta with a list of its 270 *paḍala* (1868 śl.). In a motley order the divinations are connected with the limbs of a man, their qualities being natural (e.g. right, left and middle, smooth and rough, curved and straight), subjective (e.g. handsome and ugly, hideous and pleasing, insignificant), abstract (e.g. masculine, etc., present and future, *bambheya*, *khatteya*, *vesseya*, *suddeya*). Finally, limbs are confronted with figures (from 1-10 up to *koḍī* and *aparimuta*).

10—58. Prose (śl. in 13, 22 f., 26, 46). The previous qualifications apply to the client's coming, disposition, way of putting questions, and to the locality where this happens to pass (10. 11). Fundamental traits (*gonī*) in individual human nature beginning with *dhamma*, *attha*, and *kāma*, and their signs (*lakkhana-vāgarana*, with 69 śl.) (12 13). Questions of acquisition,

1. This was the view of LEUMANN (VIIth OC, IA 10, 164) who was the first to draw the attention of scholars upon this work.

sexual intercourse, children, health, vitality (*jīta*), commercial activity (*kamma*), rains (for the crops), and military success, all of them with their negatives (14-21=8 *dāra*). A list of pleasant and unpleasant omīna (*pasattha* and *appasattha uppāya*) which allow of respective divinations (22-23, 1 and 3 *śl.*). Birth as an *ajja* (*bambhana* etc.) or *milakkhu* (*sudda*) and the domiciles as such ones (*jātivijaya* 24), gotra and personal name (here 113 *śl.*) (25. 26) Office, profession, character, residence (*ragara*) (27-29) Finery, dress, cropstore, conveyances (30-33). Previous (*vatta*) talks (34). Existence of children and their future fate (*Payāvisuddhi* 35) *dohala*, *lakkhara*, *terjara* (36-38). Looking for a wife (*Kannāvāsana* 39). Food and drink, festive entertainments (40). Sexual intercourse, partly unnatural (*Variyagandiyā nāma arahass' ajjhāya*, Col. *Rahassapādala* 41). Dreams (42). Journey and coming back (43-45). What one sees on entering the house (91 *śl.*) (46). Military campaign, victory and defeat (47-49). Diseases (50). Goddesses and gods, nakṣatras, meteoric and terrestrial omīna (*uppāta*) (51-53). Precious objects, treasures and where deposited, the same of money (*(nidhi)*¹, lost things and persons and where to be detected (54-57). Thought-reading which includes all that the world contains of living beings (*Siddhas* included) and lifeless matter (*Cintita* 58)

59. *Kāla*. 27 *paḍala* (709 G., 21, 22 (partly), 27: prose). 5 time units. *muhutta*, *divasa*, *pakka*, *māsa*, *rasa* (1). *uppāta* referred to *kāla* (U. *vidhiparikkhā* 2) and to *muhutta* etc. (3-9). The client's reference to most various, though separately grouped, impressions and objects results in predicting the general duration of an *uppāya*, its appearance in a nakṣatra, month and season, pakṣa, tithi², night, day and in certain hours of the same (10-19) The precise circumstances (observations, actions) under which the *upp.* came into appearance must be known (20). The aspect of a new-born boy and of a portentous (*ovāta*) human being, animal, plant or lifeless object of both

1. Thus rightly on p. 262, 14 of the Ed. where we find *givi* and *givu* (p. 221 f.).

2. The word is not used here nor in 21.

natural sex and grammatical gender with reference to day-times and tithis (21). Increase and decrease of the value (*aggha*) of property (*bhaṇḍa*) with reference to time units on account of what the client has told (Agghappamāna 22). Predictions concerning fire and floods (23.24). The time units, increasing in length as they are, referred to actions and objects interrelated and, for their part, increasing in significance (e.g. *muhutta*, *divasa*, *ṭakkha*, *māsa* = *devānaṃ paṇāma*, *vandita*, *thuti*, *namaṃsita*) (25). Similar reflections about *kāla* of an *uppāya*. Its length according to what happened to occur in the client's words (26). Duration and precise term (month, season etc.) of an *upph*. as inferred from the client's touching and seizing of his own limbs (Kālappavibhāga 27).

60. The preceding life of the client as a god, a human being, an animal or a denizen of hell inferred from what he has presently experienced or related (Puvvabhavavivāga Col: Purimabhavavibhāga). The same, in inverse sequence, denotes the client's destiny in the next following life (Upapattivijaya).

The Angav. is a most remarkable work not only owing to its size and the subject treated but thanks to giving us numerous insights into the daily life of the time. Long lists of individual qualities (as descent, name, occupation), town and house portions, household utensils and public institutions provide a picture of life as led in the early centuries A.D. It follows that apart from stereotype expressions the Jain character of the work is not distinct throughout. The language is near to Jain Śaurasenī.

IV

COSMOLOGY

§ 57 *The Fundamental Facts* The word “fundamental fact” is but a fairly liberal version of *atthikāya* which literally means “mass of all that is” As such it represents a mass by the totality of the units (*paesa*).¹ The five fundamental facts are known as motion (*dhamma*), stop (*adhamma*), space (*āgāsa*), souls (*jīva*), and matter (*poggala*), each in combination with *atthikāya* Viy. 775b renders alleged synonyms which, however, do not hit the point. They simply replace the basic words now in a conventional and then, again, in quite a remote way. Thus e.g. *dhamma* stands for complying and *adhamma* for not complying with the monastic duties.²

The five fundamental facts constitute the world, or, rather, the world and the non-world (Viy. 608a). Their qualities are laid down in Viy 147b. They all share in eternity. The space embraces both the world and the non-world, whereas the remaining four are concerned with the expansion of the world For the dimensions of parts of the world proportional to motion, stop and space see Viy 151a ff and, nearly consonant, 775a. All *atthikāya* except the *jīva* are inanimate (*ajīva*), and, with the single exception of matter, all are immaterial (*arūva*). The last two sentences explicitly represent Mv’s personal conception (Viy. 324b) ³ Materiality is defined by saying (324b) that

1. *astayaś cēha pradeśās, teṣāṃ kāyah* Sthān 516a, Prajn 8b 9a. See also Nemicaṇḍra, *Davvasamgaha* 24 From the *Atthikāyas* KOHL starts in his book, *Das physikalische und biologische Weltbild der indischen Sekte der Jainas* (Aliganj 1956) Rev by the AUTHOR, ZDMG 109, p 226ff

2 Thus all five *atthikāya* are dealt with in the way described This speaks against the opinion held by Jagdish Chandra JAIN (IHQ 9, 792-794) saying there here a non-metaphysical outlook on *dhamma* and *adhamma* is being given

3 Some of the audience had difficulties in understanding this as we are told in two reports (Viy 323b, 750b) Dissenters led by Kālodāi ask Goyama and the layman Madduya resp for an interpretation While Goyama is at a loss for an answer, Madduya declares himself incompetent in the matter,

among all inanimate fundamental facts matter alone is palpable (*poggal' atthikāyaṃsī cakkīyā kei āsattae vā sattae vā cīttittae vā* etc.), whereas this does not apply to motion, stop or space, even though they fill the world completely. They are, in fact, as little palpable as are the flames of a thousand candles lighting a closed room (615b).¹ As to *dhamma* and *adhamma* we know them, thanks to JACOBI on T. 5, 1. 17 in their meaning² as motion and stop so characteristic of the Jains. It is by their presence only that any motion and any rest become possible at all, so that they themselves are not actually meant³ (and, for that reason, we ought to speak of stop rather than of rest). Within the realm of souls, *dhamma* and *adhamma* produce all possible conditions of movability and its opposite, on the one hand "coming and going, speaking, moving an eyelid, activity of the inner sense, speech and body" and on the other "standing motionless, sitting, lying, confinement to the activity of the inner sense" (Viy. 608a). Concerning space we have to distinguish between the space of the world (*log' āgāsa*) and the space of the non-world (*alog' āgāsa*), the former representing but an infinitely small fraction of the total space (Viy. 151a). It is in the nature of space to give room (*avagāhānā*, not *ogāh*) to any amount of atoms (608a)⁴, but this, of course, applies merely to the space of the world, the space of the non-world being absolutely void (Viy. 151a). Notwithstanding this discrimination 1 should be observed that both space and motion as well as rest are definitely singular, whereas souls and matter are of an infinite variety, and, moreover, they alone are active. For the

but when pressed he shows by pointing out to the wind, sweet scent particles, fire made by rubbing two sticks, persons living beyond the seas, and gods, all being existent without being visible, that something, even though nothing can be said about it except by a Kevalin, yet may exist. Mahāvīra commends him for not having taught things he does not understand and for thus having evaded giving offence (*āśāyanā*) to the sacred law, the Arhats and the Kevalins

1 Note that the flame as a light is of material nature (§ 60)

2 But the *atthikāya* "dhamma" stands next to the *suya*- and the *carittadhamma*, Thāṇ 154 b

3 This might serve as a reply to SCHRADER's proposal (Festgabe für JACOBI, page 274) to derive *dharma* from a root *dhṛ* "to go"

4 It therefore does not count among the *atthikāya* which "touch world", Thāṇ 251b

nature of the s o u l rests in its intellectual function (*uvaoga*), which by means of will and skill is put to use in all possibilities of intellectual cognition. The m a t t e r s cause the souls to take possession (*gahana*) of the bodies and to enact bodily functions. They own all qualities of colour (black, dark, red, yellow, white), of taste (bitter, sharp, astringent, sour, sweet), of smell (good, bad), and of palpability (heavy, light, soft, rough, cold, warm, sticky, dry, see also Thān 422a). The five fundamental facts (see also Thān 332b, Samav 10 a) are substances (*davva*)¹. But the expression *savva-davva* also includes the time, (*addhā²-samaya*) according to Vīy 873 a)³. With the former it is connected by its eternity and singularity, whereas it is separated from them by being confined in space and by lacking space points. The difference in opinions manifests itself in the conception of T 5, 38 where time (*kāla*) is being unconditionally acknowledged as matter by the Dig, whereas but conditionally by the Śvet. Just as space consists of units, so does time. One unit of time (*samaya*)⁴ forms the present. It then follows that the future owns as many *samaya* as does the past plus 1, and the latter again as many as the former minus 1, the total time comes to twice the amount of the past with a plus, and twice the amount of the future with a minus, and, consequently, the time that has passed makes up half its total with a plus, and the time to come half its total with a minus (Vīy 889a)⁵. Even the smallest calculable fraction of time, the *āvaliyā*, consists of as many⁶ *samaya* as all

¹ *daviyadī, gacchadī, tāṃ sabbhāva-pajjayāim jaṃ daviyam tam bhannante* Pancatthik 9

² Most certainly it goes back to *adhvaṇ*, but the Sanskrit of the comm. gives *addhā*—(fem.) Vīy 532b, in Thān 201 a we find *addhā-kāla*, the eternal time as the fourth beside the civil time measure (*paṃāna-k*), the amount of life-time (*ahāu-nvatti-k*), and the time of death (*marana-k*)

³ F K LALANA, *The six Dravyas of the Jaina Philosophy*. Bombay 1914

⁴ Vīy 6, 4, 1 speaks of *paesa* as of time, the soul is *kāl'āsesaṇaṃ sapaesa*, because it has existed since times eternal—For the atomism of time with the Jains see MASSON-OURSSEL, *Archiv f Gesch d Philos* 40, 173-176

⁵ Both past and future being without beginning and without end are equal in duration. The "plus" and the "minus" are the 1 *samaya* of the present

⁶ *asaṃkhejja* (ι)=incomputable as against *saṃkhejja* (x)=computable, expressible by a definite figure; *apaṇṭa* (∞)=innumerable

the remaining others which are being recorded (see also Thān. 158a), up to the *ussappinī*. When occurring repeatedly their number may increase up to ∞ (Viy. 887 b). For the list of time measures see Viy. 275a, 888a, Jambudd. 89a and also a.o. Thān. 158a. It may suffice to refer to JACOBI on T. 4, 15 and KIRFEL, *Kosmographie* pp. 337-339, and to note the fundamental difference between those measures that are calculable (*gamiya*) and those expressible by way of comparison only (*addho'vamiya*). The latter (see Jambudd. 92b) according to Thān 90b, 430b are *pallovama*, *sāgarovama*, *osappinī*, *ussappinī* (§ 12), *poggala-pariyaṭṭa*, *tīyaddhā*, *anāgay'addhā*, and *savv' addhā*, but that expression will apply only to the first four or five.

§ 58 *The Units*. Logically the "masses" are preceded by their parts, and these appear as the *desa* and the *paesa*. But while the *paesa* are essential for the structure of the world, the *desa* represent but calculable quantities. So, e g, the fundamental facts *dhamma*, *adhamma* and *āgāsa* do not exist in their totalities in the lower, the upper and the higher regions of the world, but only in their parts mentioned (*desa*), whereas in the total world (*loga*) they do not exist in parts but wholly with the exception of *āgās'atthikāya*, which, as we saw, is existent in the world as well as in the non-world (Viy 522 a). On the other hand (see again Viy. 522a) we may just as well examine a unit of space as to whether it contains the *atthikāya* either completely or in parts (*egammi¹ āgāsa-paese*). For other considerations containing the *desa* and the *paesa* see Viy. 149a, 493a, 714a; Pannav. 8a. Let us make it quite clear that it is the *paesa* or the "units" which in their totality, and in their totality only, constitute the "masses". No fraction of either, however large, may replace them, and any deduction is as little admissible as with a concrete object (*no khande cakke . . . — sakale cakke . . .* Viy. 148a). With motion, rest and space this conglomeration which lacks both beginning and originator (*vīśasā*) is not a merger, but the units of one and the same mass are strung up like the links of a chain. They do not mix like milk and water (Viy.

1. We ought to expect * *egamisi*

394a incl comm). The number of the units is ∞ with the total space as well as with souls and matter, and \hat{s} with motion and rest (148a) and with the space of the world (421a, 610a, 873b) Moreover there are 8 centremost units (*majgha-paesa*), which, each with motion, rest and space are supposed (acc to comm.) to exist in the centre of the upper regions of the world, called the Ruyaga, in Rayanappabhā (§107), with the souls within their resp. bodies They will occupy 1 to 6 or either 8, but *vastu-svabhāvāt* not 7 units of space (Viy. 886a, 395b). In the realm of space we meet the 4 main and the 4 intermediate directions (*disā* and *vidisā*) in addition to zenith (*uddham*) and nadir (*aho*) Their are given as *indā*, *jāmā*, *vārunī*, *somā*; *aggei*, *nerai*, *vāyavā*, *śānī*, *vimalā*, *tamā* (see Viy. 492b).¹ Acc. to the comm. they are of two-resp one-dimensional shape.² The pole from which they start (Viy 606a, Thān, 477b) is a square cube³ of 8 *paesa*.

If the masses constitute the world, they necessarily have to interpenetrate each other, and the units of the one must be touched (*putṭha*) by those of the others. Viy 609a discusses with how many units this will be the case In doing so, the units of time (*addhā-samaya*) are included In other words, they are placed on the same level with the others and considered constant Maximum and minimum figures (*ukkosenam* and *jahantnena'm*) mean that a unit in one corner of the end of the world can be surrounded only by 2 lateral units and 1 either above or below, but not by 4 round about and 2 above and below. Both space and time are conditionally, or resp. unconditionally, limited, so that contact will not occur everywhere. The masses interpenetrate each other insomuch that 1 u motion will coincide with 1 u rest 1 u space (*jattha . ogādhe tattha. og*). That is to say that e g in the minimum of cases the afore-said unit of motion is being touched not by 2 but by 4 u rest, and not by 6 but by 7 u. But then it coincides (*taṁ pratyekam antarvyāptam*) with ∞ units of souls, matter and time, as far as the latter is

¹ But we find the tripartition above, below and horizontal directions just as well (Thān 132b)

² *disāḥ śakaṣoddhu-samsthītāḥ, vidisāḥ tu muktāvaly-ākārāḥ, ūrdhvādho-disāu ca rucaḥ ākāre* Vy 493b

³ LEUMANN, Übersicht p 43b

concerned By 1 u. of soul, and, equally, 1 u of matter, coinciding with ∞ u. of soul and ∞ u. of matter, we are given proof of the greater density of these substances

Viy 420b, Thān 251b say that the individual soul has as many *paesa* as has the space of the world But this does not refer to the limiting case of the Kevalin as the comm. wants us to believe, it simply says that both have units One individual soul occupies the room of $1/2$ ang. (or either more) of such quantities (T. 5, 15) as are presumed by the part of that or that size acquired through Karman So then (substantially) the soul of an elephant equals that of a louse, as is explained by the simile of the lamp whose light, as the case may be, will illuminate a large or a small hollow room (Rāyap 140a, referred to by Viy. 313a). T. 5, 16 in giving this simile its literary expression hereto introduces the conception of contraction and expansion. They stand for different densities within the same number of units, i e., 2 in different bodies (Siddh. ref to T. 5, 8).¹ For the historical importance of the theory (Viy 365a), according to which the soul equals the body in size, see JACOBI GGA 1919, 17.

Also the units of matter differ in number from 0 up to ∞ . The lower limit is the smallest unit of matter, the atom. It is true that, acc to Kundakunda, the atom has 1 unit (Davvas 26), but acc to Umāsvāti it has none It is one (T. 5, 11 and Siddh. ref to 5, 11, 14), and thus it coincides with 1 u It follows that also the word *poggal'atthikāya-paesa* is being applied in speaking of the atom, and its combinations have the word *paesa* added (see below) ² There is still another difference with regard of the density of these *paesa*: 1 u space may contain up to ∞ atoms (Viy. 613b) That is to say: 2 units of matter coincide with 1 or 2 u of space (and as many units of motion and rest), 3 with 1, 2 or 3, and finally ∞ with 1, 2, 3, x, ∞ or ∞ . For an explanation Siddh. gives a number of similes with ref to 5, 14.

1. JAINI, Outlines p 17 speaks of an elasticity of the soul

2 Comp also *paramāṇu -poggala-mette m paese* Viy 579a

§59. *The Atom.* *poggala*, the word for atom,¹ is applied in its basic meaning as a "concrete body" in *Viy* 176b, whereas in 240a it means the part of an individual. The atom is eternal (*Viy* 65b) as is the substance of which it is the ultimate particle and among the fundamental facts it is the only one bearing any physical character (*T* 5, 4). Owing to the fineness of its structure by which it eludes observation, it is beyond the grasp of tools and indivisible², but it owns the qualities of colour, smell, and taste at either 1 kind or 2 kinds of touch (*Viy.* 746b 797a) among the possible 5, 5, 2 and 8 kinds of these four (*Viy* 778 a), and such in an endless variety of different grades (*guna*). The qualities of touch are cold or warm in combination with smooth or rough

It is either spontaneously or by means of an impulse from without (*Thān* 63b) that atoms by merging constitute aggregates (*khandha*) which, as the case may be, may own a greater number of qualities of colour, etc (*Viy* 748b). According as such a one consists of 2, 3, etc., atoms, we speak, as already mentioned, of a *du-paesiya, ti-p*, etc. up to *ananta-p. khandha*. In connexion with aggregates the atom is called *paramānu-poggala*. An aggregate consisting of even-numbered atoms is divisible into halves, but it lacks a middle (it is *amajjha*), whereas conditions are reversed with odd numbers, and both cases are valid with indeterminate numbers, (*λ*, and *μ*), it goes without saying, however, that all of them are *sa-paesa* (*Viy* 233 a). The way how to decompose an aggregate consisting of 2 and more atoms is demonstrated in *Viy* 102b and, more closely, in *Viy.* 561a. That such a decomposition will result in gaining only complete atoms had to be specifically stressed in 103a. Just as the question of divisibility is being discussed so is the contiguity (*puttha*) between atoms and aggregates by taking as a basis 9 possibilities, either whether it occurs in parts

¹ *pūrayati galati ca* Siddh ref to *T* 5, 10, comp with 5 32 —*poggala* is scarcely ever read

² This is what the *paramanu* has in common with the *samaya* and the *paesa* (*Thān* 134b). It appears to be probable that *apaesa* along with *anaddha*, *amajjha*, and *avibhāma* equally means only the lacking of parts (see also 233a and others)

(*desenam*, *deseḥuṃ*) or completely (*savvenam*) (Viy. 233b). It must be noted, therefore, that the number of atoms constituting an aggregate may divide among one and several *paesa*.

The mergence of atoms and aggregates with atoms and aggregates is brought about (Viy 102b. 103b) by a *sineha-kāya*, though nothing concerning its nature is mentioned.¹ T. 5, 32 introduces the contrasted pair of *snigdha* and *rūksa*, 'smooth' and 'rough'.

As is the case with all sensuous qualities, also these two *lukkha* and *niddha* (Viy 638 b *lukkhi* and *alukkhi*) exist in gradations (*guna*), as is presupposed by Viy 878 a, whereas in Viy. 394 b they are but hinted at by *vemāya-niddhayā* etc. According to T 5, 33 the lowest grades will not merge because they lack sufficient power to assimilate (*śakti* Siddh), it takes at least two grades of difference to make this power effective (T. 5, 35), and that is why only equal grades—though only s+r, not s+s (T 5, 34)—will assimilate, and, accordingly, only the lower grade to the higher.

§60 Thus it follows that the atom, though as a substance it is eternal, is changeable in its conditions. As to Viy. 640 a, colour, smell, taste, and touch are qualified as conditions, (*pañjava*). They are inherent in the substance (*pañvāya* T. 5,37). But according to Pannav 5 (196b) *pañjava* also means the secondary differences of atoms and aggregates within each of the above mentioned four spheres and, moreover, within their size (*ogāhanā*). Their number is ∞ , and thus it happens that they coincide with the *pañvāma*, the "accidental" changes and their results, which constitute the momentary being of an object (T 5, 41). As such the above mentioned four are referred to by Viy 420 b along with the shape (*saṃthāna*, see below). The latter is omitted by Tḥān 201a. These five species as existing spontaneously (*viśasā*) are contrasted with those caused by an impulse from without (*pañgasā*) or either by the mixture of both

1 Quite another kind of *suhuma* is the *sineha-k* which acc. to Viy. 83b moves in all directions (*pañvadaḥ*) and thus dissolves rapidly in contrast to the *bāyara āu-kāya*

(*mīsa*) according to Viy. 328 a¹. *parināma*, however, within the realm of the inanimate does not refer to those five only (Pannav. 13, 287b), but also to combination (of smooth and rough), cleavage (s b) and sound (s b), as well as to motion and the absence of weight and non-weight. Motion may manifest itself by extending either in long or short distances or by either leading to contacts or not ². From Viy 95 b, we learn that neither heavy nor light is a quality of the Karman-body (§ 262), of the tinge of souls (§ 97), the inward sense (§ 71), or of speech (§ 68) which all pertain to the realm of matter.

The transition from one *parināma*³ to the next is described by synonyms as a process of motion; *paramāru-poggala* (and *khandhe*) *eyai veyai calai phandai ghattai khubbhai udīrai tarī tarī bhāvaṃ parinamai* Viy. 232 b (after 182b). Aggregates will experience it either totally or partially. T 5, 26 teaches a o. that aggregates come about by an amalgamation of atoms as well as by the secreting of atoms (*sāhanarā* and *bheja*, Viy 567a), i.e. by giving away atoms. This theory may well go back to Viy. 743b, where it is said that of all *poggala* seized for the purpose of taking in matter (*genhai*) a being will retain (*āhārai*) 1/2 and give away 1/∞ (*niyyarai*), that is to say *seya-kāle*, during the vibration as which the transition manifests itself (*grahanrāntaram* Vy.), for with reference to *eya* all atoms and aggregates are called *seya* and *nireya* (*saiya* and *nireja*)⁴. The act of motion passes in an incalculably small time, i.e. in 1/2 *āusalyā* at the very utmost, which is called *antara* (Viy. 234b, 833b).

In connexion with the theory of motion the *sadda-pariraya poggala* are quoted and equated with the atoms and aggregates in motion, whereas the *asadda-p p* are equated with those in rest during motion and rest. So that, then, the sound, either *subbhi* or *dubbhi*,⁵ is a quality of the matter in its form as an

1 The *paogasā* and *vīsasā parinaya poggala* are mentioned by Subuddhi to his prince Jiyasattu (Nāya 12, 174a)

2 For the *phusamāna-gai* Prayn refers to the act of making a flat stone skip along the surface of water (*bāla-jana-prasiddha*)

3 Acc to Viy 638b the new *parināma* comes on when the former is *niyyajja*. In this connexion *samayaṃ* means "for some time"

4 Vy is wrong in saying *eyai kāle*

5 Nāyādh 174a, Pannav 288a

aggregate. According to T. 5, 24 the same is true with association, fineness and coarseness¹), form and decay, darkness, shadow, warmth and light. Of these ten phenomena the first seven are such inherent in the aggregate, whereas the last three are irradiations. The modes of the association, i.e. of the units within the animate and inanimate world, are grouped by Vīy. 394b according to spontaneousness (*vīśasā*), impulse (*paogasā*), and finality (*sāya*, *anāya sapajjavasiya* and *ap.*). Between the fineness and its opposite there runs the dividing-line which separates this concrete world from the one beyond sensual conceivability, the first being *bāyara*, the latter *suhuma*. Their difference is in the number of atoms: an aggregate consisting of 2 atoms is equally unsplitable as is the single atom, whereas if consisting of ∞ atoms it can be split, and then it is even combustible as well as it may get wet and be able to float (Vīy 232 b). T. 5, 28 points out that its spectacular appearance results from decay and association, and in order to prove this Devanandin offers a theory², though it may simply mean that the object radiates atoms which associate with the organs of sense known to be of material quality. As to the shape of aggregates we distinguish between geometrical and non-geometrical formations, the latter being called *anuttamtha* "not thus behaving". In circular (*parimaṇḍala*), orbicular (*vaṭṭa*), triangular, square, and linear formations the atoms, or the units resp., are arranged in an either two-or three-dimensional order (*payara*, *ghana*), in linear formations (*āyaya*) also one-dimensionally (*sedhi-āyaya*), and, with the only exception of circular formations, they contain atoms in either odd or even numbers (*oya-paesa*, *jumma-p*). Their highest and lowest numbers are laid down in Vīy 860a. Decay may manifest itself in the shape of smaller units, lumps, potsherds, leaves, and brookes (Pannav 266a, 288a). The material quality of darkness becomes evident in the *tamu-kkāya* and the *kanha-rāi* of the world (§ 134). Darkness and lightness of night and day are attributed according to Vīy. 246b to *asubha*

¹ Thus instead of "smallness" and "largeness" (JACOBI for *saukṣmya* and *sthaulya*).

² JACOBI with ref to T. 5, 28

and *subha poggala*, and to the former also the darkness in the different regions of hell (see Thān. 263a). In the legendary story of Jambudd. III the lightness is like scattered matter that lasts. For Bharata (§ 13) at the head of his army succeeds in passing through the long tunnels of both the Timisa-and Khandappavāya-guhā in the rays of his jewel by forming circles which alternately appear on the right and the left walls (Jambudd 225a). This can but mean that he is anxious not to leave any spot dark, and, actually, no spot remains dark, after he has passed. Each circle lies in the radiant sphere of the other.

§61. *The Substances.* The formations of aggregates, as mentioned just before, result in the substances of, so to say, a second order, i.e., in material masses called *davva* like those of the first order (§ 57). In Vīy 420b we read that one atom and its multiples form whole *davva* or either parts of such (*desa*)· from four atoms upwards all eight combinations possible in this connexion will occur. *suhuma* (§60) are the accumulations of colours, smells, and different kinds of taste and palpability which, acc. to Vīy. 757 a, are to be found in closely packed density below each region of the lower and the upper world. Material masses of this kind, together with their shapes, come into being spontaneously, whereas all accumulations furnishing the souls in the world with bodies and opportunities of activity—for the inanimate substance is destined to serve the animate (Vīy 856a)—result from impulse, i.e., through the working of the Karman. But as those accumulations have concrete qualities, it follows that they represent a mixture of both cases (Vīy. 332 a). Now, owing to Karman, matter forms in four bodies, the inward sense, speech and breath (Vīy 567a, Thān. 158a) The infinite variety of matter thus grouped is called *poggala-pariyatṭa*¹. At least in the case of the inward sense matter is divided into *vagganā* (Vīy 222a, 646b), for we hear of the ∞ *mano-davva-vagganā* of certain gods. Further proofs for this are missing, but s b Of the five bodies existent the body of transmission is

1. Homonymous is the maximum measure of time (Vīy 887b)

equally missing in this connexion, since (comp. Sthān. 158a) it cannot occur along with the body of transformation in the same individual (§ 62). From Viy 621 a ff. we learn, to begin with, that the inner-sense and speech are of a bodily quality (*rūvīm*). Concerning the inner sense we may refer to the *vagganā* mentioned above. Speech, however, counts as being shaped like a thunderbolt (*vajja-saṃthiya*, Pannav. 255b, comp § 68), and its atoms are “beyond heavy and light” (*agurulahu*) and thus of a quality (*parimāma*) which (comp Prajn. 389a) is shared by all non-bodily substances including also the inner sense and the Karman. That both speech and the inner sense must be distinguished from the I (ego) (*āyā*) (§ 70), that they are unconscious (*acitta*) and inanimate (*ajīva*), but yet are inherent in souls, adds to establish their bodily nature.

§62. *The Bodies*. During the time of its specific bodily existence the individual possesses more than one body (*sarīra*). Their number is five in all (Pannav 12. 21; Samav. 216a; Thān 169b), but their distribution among the different beings differs (§ 67. 104).¹ They all have the Karman body (*kammaga s.*) and the fiery body (*teyaga s.*) life long. All beings pertaining to the upper world, i.e. animal and human beings with one to five senses, permanently own the earthly body (*urāliya* or *orāl s*). Both the gods and the inhabitants of hell always live in bodies of transformation (*veuvviya s*),² but other beings do so only temporarily, while the body of transposition (*āhāraga s.*) merely applies to human beings and in special cases only. The functions of some of these bodies as well as their purpose are told in the commentaries which however do not always agree. The established list leading from *orāl* over *veuvv*, *āhār*, *tey* to *kamm sarīra* suggests the gradual increase in fineness and, simultaneously, in density of material units (T. 2, 38-40).³ Apart from the beings already mentioned all higher animal and human

1 Acc to Viy 622b Pannav 268a we have different kinds due to stages of transition supervening in case the seizure of a new body has not yet been completed

2 (*a*) *veuvviya-sarīra* ref to gods = (un)adorned Viy 746a

3 In this connexion Prajn 269b speaks of *varganāsu pradeśa-bāhulyam*

beings, generated by breeding (§63)—the latter when living in a *kamma-bhūmi* (§117)—own bodies of transformation, that is to say, that a human being may change its appearance (*vikuvvittae*) magically, provided that it be free from sin (*amāi*, § 181). For, so we learn from Vy. 189 a, the prepared food taken by a monk in a sinful way (*māi*) will strengthen his bones and the marrow within, but it will weaken flesh and blood, whereas the accidental food of the sinless will result in the opposite. While the one aids to the development of the bodily organs, the other will transubstantiate into excretions. The capability of transformation therefore depends on bodily pre-conditions. We are not told when and at what point higher animals enter into transformation. Apart from the beings mentioned above the coarse wind-beings equally have bodies of transformation, which appear in the shape of a flag (*paḍāgā*), manifesting themselves either as storms or clouds, yet without changing their minute smallness ($1/2$ angula) (Pannav 416a, 417a) ¹ Animal and human beings, however, may become either quite small or immensely large ($1/6$ ang. upto 100, resp. 100,000 joy) The inhabitants of hell and the gods, with the exception of the Gevijja and Anuttara (§ 129), are equally able to change their appearance, even though they already live in bodies of transformation. This body of transformation so characteristic of their form of existence and built up without attracting foreign particles of matter (§ 181) is called *bhava-dharanyja*, whereas *uttara-veuvviya* is the body deliberately taken.

Pannav 423a points out that the body of transposition is exclusively destined to serve pious persons in the Karman places (§ 117) who own magic powers (*iddhi-patta*), but who have not yet succeeded in accomplishing self-discipline (*paṃatta-saṃjaya*), whereas acc to Devanandin on T 2, 37, 49 it is meant to prove those powers, to solve subtle dogmatic questions, and to escape any violation of self-discipline ² It is defined by T 2, 49, and its possession is confined to those who are in

1 *etāvat-pramāṇa-ṭṭikurvanāyāṃ eva tasya śakti-saṃbhavāt* Prajñ 418a

2 *sāḥkṣma-paḍārtha-nirjñānārtham asaṃjaya-pariyohiṭṭayā ca*

command of the 14 Puvva, i.e. its occurrence is antedated by Umāsvāti and located in the historical past. We may be allowed to assume that rather than *āhāraka* "attracting"¹ its name should be *ādhāraka* in that the body represents a "vessel" either for him who, for the time of 1 *muhutta* at the longest (T. p. 60, 9), slips into it which is no higher than a *rayaṇa*, or else for the instruction brought home by its bearer from a consultative magic change of place. But it was not before Umāsvāti that the latter purpose was introduced. The body of transposition does not exist simultaneously with that of transformation, as this is neither the case with magic powers by which they are generated. The Karman body is the individual formation given its shape by deeds previously wrought. The fiery body has to be understood as a bearer of potential energies, and by being allotted to all beings the latter are attributed a latent energy which may manifest itself with individual persons on the ground of magic power (*labdhi*). This power will appear a. o. as an radiation of either heat or coolness as an effect of either curse or blessing (comp. the *teya-nisagga* which provides the name for Viy 15). The teachers referred to by Umāsvāti on T. 2, 43 are wrong in considering only those exceptional persons, as is Devanandin in adding his Sūtra to T. 2, 48. Not enough with the functions mentioned, Siddhasena (T. S. 59) and Haribhadra (T.S. 56), understand the fiery body to cause digestion, but we think it improbable that of all five bodies the finest but one should serve that purpose. All bodies except the earthly one are closely linked with the soul (*jīva-phuḍa*, Thān. 251b).

§ 63. *Physiology*. A being comes into existence physically by three ways, by manifestation, by coagulation, or by generation. Manifestation (*uvavāya*) means creation brought about with lightning-like suddenness without any material basis,² thus the gods and the inhabitants of hell spring into life. Coagulation (*sammucchanā*) takes place spontaneously out of existing matter; it pertains to all beings furnished with one to four senses. All

1 *āhriyata ity āhārakah* Devanandin 182

2 *jaha mehasani-tiyas'indacāva-vijjūna sambhavo hoī gāyanammī khaṇṇa, aha devāna vi hoī uppatti*, Haribhadra, Samaraaccakahā ed JACOBI, p 57, 3

beings with five senses, i.e. all higher animals and human beings, come into existence partly in the same way (s.b.) and partly by generation (*gabbha-vakkanti*, *garbha-vyutkrānti*). The place where a being comes into existence, is its place of origin (*jonī*).¹ It is either cold, animated, concealed (*saṃvudā*),² or the opposite hereof or both. A fourth trinity (Pannav 227b) is purely anatomical (§ 64). The distribution of these 9 qualities among the beings, as given in Pannav. 9 (comp. Thān 121a), can be easily understood. The inhabitants of hell, for instance, come into existence in cold and hot places, the gods in temperate ones (*siḍṣina*). In such as the latter ones generation takes place, and, moreover, they are both covered and open to view (*saṃvudā-viyadā*). For according to its position the uterus (*garbha*) is concealed, though yet it is visible in advanced pregnancy. Manifestation takes place in unanimate places. the gods come into being on the throne of gods and in the garb of gods, that is in a covered concealed place, and the same applies to the inhabitants of hell (*nārakōtpatti-sthānānām saṃvuta-gavāksa-kalpatvāt* Prajn. 227a b.) Coagulation takes place in an open place. Of the higher animals the miraculous species of snakes called *āsāliya* exclusively comes into being in this way (Pannav. 46 a), but there are still other beings which may be brought into existence by coagulation, e.g., the *suṃsumāra*, *mahoraga*, quadrupeds equipped with claws (*sanapphaga*) and the *viyaya-pakkhi*, birds that never fold their wings (Pannav 44a, 45a, 46b, 49a), and, finally, the human beings. These all may spring into life from moist human excretions and from uncleanly matter spontaneously³ (50a), though than they will remain undeveloped (*apajjatta*) and diminutively small ($1\frac{1}{2}$ ang), and they will stay alive for 1 *muhutta* at the longest. Apart from the *āsāliya* all these beings generated by coagulation are sexless. By development (*pajjatti*) Umāsvāti on T. 8, 12, p 177, 4ff asks us to under-

¹ With plants we speak of *jonī-voccheya* when their germinative faculty extinguishes (Viy 671, 274a, Thān 123b, 343b, 405a)

² For *saṃvūta* JACOBI T 2, 33 writes *saṃvūta*=minimal Siddhasena p 191, 19 suggests this version by *saṃvūta praccannā saṃkaṭā vā* (*yonī*)

³ Āyār 5, 2 distinguishes between the *sammucchima* and the *rasaya* and *saṃseṣaya*. For the same list as here ref to Thān 385b, 416a

stand the faculty of assimilating matter to the body and to complete the same along with the sensuous and breathing organs, and, as the case may be, also the speech and the inward sense. In elemental beings, as well as in plants, animal and human beings this development may even be found missing, and then they are *apajjatta*¹

§64. The description in the text of embryo-life nearly always concerns the human germ. An animal embryo (*tirikkha-jonīya gabbha*) exists between 1 *muh* and 8 years, a human one (*manussī-g*) between 1 *muh* and 12 years, and a fully developed fruit (? *kāya-bhavattha*) between 1 *muh* and 24 years. This conception is obviously related to the informations rendered by *Viy* 88b saying what evil and good is being practised by a *jīva gabbha-gaya samāna*, and of what kind his reward will be when he dies as such a one. Human and animal sperm lives in the womb from 1 to 12 hours (*Viy.* 433a, *Tand.* 4b²). Cases of getting with child and of its counterpart, negative sexual intercourse, are dealt with by *Thān.* 312b along with their causes. The first food an embryo (*jīva*) takes after having entered the womb consists in the menstrual blood of the mother (*māu-oya*) together with the sperm of the father (*Sūy* II 3, 21); 353b), but later it varies. It is not taken by bits, but by the entire body (§ 96), and while nothing is being excreted, all serves to build up the sensuous organs and the body. Mother and fruit are interconnected by two strings. the one (*māu-jīva-rasa-hārīnī* scil *nālī* ?) starts from the mother and serves the fruit to breathe and to transubstantiate the different substances, whereas the other (*putta-j-r-h*) starts from the fruit and serves it in building up the body (*cīnai, uvacīnai*). While flesh, blood and brain come from the mother (*māy'anga*, *Thān.* 170b *māy'a*), bones, marrow, hair and nails come from the father (*piy'a*). These parental gifts (*ammā-piyya sarīraya*) will endure as long as the body of the descendant remains unweakened (*avvavanha*). The main source for the afore-said is *Viy* 87a, partly also *Tand.* 7a, 8a.

1 Acc to *Viy* 852b, *Samav* 26b this sums up to 14 kinds of beings.

2 Ed. DLJP 59

The embryology of the human being is discussed in the first part of the Tandulaveyāliya. In referring to the introductory Gāhās we here but state that the margin of fertility is 55 years with the woman and 75 years with the man (v. 13, comp Sthān 313b), and that the fruit remains in the womb for $277\frac{1}{2}$ days on an average (v. 4f). Its stages are listed as *kalala* (7 days), *abbuya* (the same), *pesi*, and *ghana*. Its weight amounts to 3 *karisa* = $\frac{3}{8}$ *pala* in the first month, in the second it gets solid, in the third it rouses lusts within the mother, in the fourth it makes her limbs swell, in the fifth its extremities and its head develop (*panca pindiyāo*), in the sixth its gall and its blood, in the seventh its veins, muscles, vessels, nerves, pores, hairs, and nails, and in the eighth the child is complete. The sex depends on the preponderance of either sperm or blood, in case neither prevails sexlessness will result. A sexless fruit lies (v 18) in the centre of the mother, but a male on the right, and a female on the left side. Its position and its condition are in accordance with the mother. The word *bimba* (Tand. 14a; Thān. 287a) appears to qualify the result of a miscarriage. Acc to Vīy 89a a cross-position will lead to a still birth. A description of the female genitals is rendered by Tand. 4a. From Pannav. 9 (277b), Thān. 121b we learn that the uterus may be either convex, concave, or flat (*vamsi-patta*). In Vīy 218 a the role attributed to Hari Negamesi of dislocating the embryo is apparently due to generalising the well-known individual case.

The generated beings are born either in the egg or with the amnion (the chorion), or as living young. Apart from birds, all snakes, fish, lizards, turtles and crocodiles are egg-born (*andaya*). Most higher quadrupeds and all human beings are born with the chorion (*jarāyua*). Whereas some quadruped like elephants and mammals with digits extended to support a wing-membrane (bats etc) are born complete (*boyaya*)¹

¹ *boyaya*, Skt *potaya*, is explained by KOHL (ZDMG 103, p 153) by "born in a boat", the boat, in his view, being represented by the burst covers developing the fruit when leaving the womb. Though this may well apply to

§65. As coarse as all these conceptions are, so is the human anatomy (Tand 35b). Apart from the quantities of liquids and other bodily items which can be omitted here, the human being has 700 veins. Starting from the navel 160 each extend upwards, downwards into the legs, downwards into the abdomen, and horizontally, 25 each contain mucus and gall, 10 contain sperm. Furthermore there are 900 sinews, 500 muscles, 900 vessels, 99 million hairpores, not counting the hair of the skull and the beard, and 33 million including the latter. Some figures concerning women and hermaphrodites slightly differ in giving them 670 and 680 veins, resp., and 470 and 480 muscles, resp. Moreover, we learn that the male is furnished with 5 and the female with 6 inner organs (*koḍha*), and that with the former we find 9 and with the latter 11 apertures (*soya*).² It is but due to a tendency of discrimination that in contrast to the general Indian view, that the left side is qualified as good (*suha-parinama*) and the right side as being unpropitious (Tand 35b).

With the only exception of the Tand as concerns the structure of the human body, we meet next to nothing but generalities.³ Thān 357 a, Tand 27b know of 6 different ways of joining the bones (*saṃghayana*, *saṃhanana*) by means of hooking and pinning *vajja-risabha* (or *vairōsabha*) *nārāya*, *risabha-n*, *n. addha-n*, *kīliya* and *chevattha* (Umāsv on T 8, 12 gives *srpātika* instead). For an explanation see a. o. V. GLASENAPP, Karman p. 29, for an illustration see BASTIAN, Ideale Welten I, plate IV (the corresponding sentence on p. 283 is incorrect). From coagulation there results the sixth (and worst) kind, from manifestation none at all, since inhabitants of hell and gods have neither bones, nor sinews, nor veins; with generation all kinds are possible. Acc. to Tand 27b the *chevattha*-joint is the only one, however, which now still pertains to human beings.

bats, yet it remains to be asked whether it is equally true of elephants and many more quadrupeds listed in the comm. on T 2, 34

1 Umāsvāti on T 2, 34, Śīlānka on Āyār 5, 2.

2 Here we have to add the nipples. They are not mentioned by Thān. 450b

3 But Vivāgas 42b states the 48 *nālī* and their functions

The first is the ideal, and as such it is characteristic of the Arhats etc

The shape of the body (*saṃsthāna*), too may appear in 6 different kinds (Thān 357a, Tand 27b). A being is proportioned either all over (*sama-cauraṃsa*), or only above (*niggoha, n-parimaṇḍala*), or only below (*sāyīa*, Comm *sādi*, Um. *sāci*). It is either hunchbacked (*khujja*), or crippled (*vāmana*), or deformed (*hunda*) The latter refers to the inhabitants of hell (comp § 109) as well as as to all coagulated beings except those furnished with one sense only, as is described in § 105. While all kinds apply to the generated higher animals and human beings, the first kind only will apply to the gods

Next to the shape of the body we have to mention its size (*sarīr'ogāhanā*) The bodies of elemental beings will not go beyond their diminutive smallness which, as a minimum, pertains to all earthly beings. But everywhere else the maximum size is enormous plants and aquatic animals upto 1000 *joy.*, animals living on dry land up to 6 *gāyūya*, and human beings up to 3 *g* etc. (Pannav 412b). Beyond the range of the horizontal world the size of the body will increase the more the deeper we go, as it will decrease the more the higher we go : the beings inhabiting the deepest regions of hell measure 500 *dhaṇu*, the Anuttarovavāyīa 1 *rayanī* (Pannav. 417a). For the *siddha* see §187.

§66. We now come to speak of the bodily functions. Breathing is called *ānamar pānamar*¹ *ūsasar nīsasar*. While the first two words express the inward activity, the last two refer to the outward one (Prajñ 220 b) Unexceptionally all beings breathe (Pannav 7), but the intervals will be the longer the higher they stand. Thus the inhabitants of hell breathe incessantly,² whereas the highest Vemāmya breathes every 33 fortnights only, but animals furnished with one to five senses and human beings follow different ways of breathing (*vemāyāe*). As we learn from Vīy. 274b in contrast to Tand 3b, the frequency

1 = *aniti, prāṇiti*

2 For all tormented beings breathe rapidly, Prajñ 220b

of breathing is the same with the embryo as it is with the fully developed man, and he will retain this frequency for the whole time of his life, i.e. 3773 in 1 *muhutta*. So, then, respiration (*ussāsa-nissāsa* or *pānu*) comes to be a time-measure. While the breathing of beings having two to five senses was accepted as an established fact (*jānāmo pāsāmo*), it seemed problematic with regard to elemental beings and plants, but it is explicitly stated to apply to them as well (Viy. 109a), and, moreover, Viy. 109b continues in saying that "breathing" embraces all possible matter (*davvāṃ*). This statement is as surprising as is the adjoining and incorrect reference to Pannav. 28 (the *Āhāra-paya*). A windbody (*vāuyāya*) breathes his own kind, and even though by inhaling its own the same has perished (*uddattā*) in it a many hundred thousand times, it will yet reappear on and again (*paccāyāi*, Viy. 110a) ¹ In some other connexion we are told that the elemental as well as the vegetable beings inhale and exhale each other (Viy. 419b) ²

The earth- and water-beings are not capable of moving voluntarily, nor are plants. Hence they are called *thāvāra*, i.e. stationary, in contrast to all other beings, called *tasā pānā*, i.e. movable (comp. e.g. *Āyār.* 5, 1). The text of *Dasav* 4 begun hereafter shows the altogether unobjectionable meaning. But *Siddhasena on T* 2, 12 (p. 158, 3) distinguishes between the two groups as such in which both the conditions and the mood of the corresponding being show up externally and such where they do not, for *trasa*, so it is said, originally (*ādaṃ*) means *sukha-grahana*. Acc. to *Devanandin* *trasa* expresses the possibility of transition into a different class of being which, as was mentioned just before, certain beings are lacking, so that for him all beings having one sense only belong to the *sthāvāra*.

All beings brought into existence by coagulation are, without exception, sexless (*Jīv* II), and the same applies to the

¹ Abhay maintains that the particles of matter constituting inhalation and exhalation are of finer quality than those composing the "earthly" and the transformation body of the wind-being (110 a)

² Abhay without having an opinion of his own follows the "*pāyā-vyākhyā*" and builds up a theory according to which closely connected earthly and other beings mutually assimilate in breathing

inhabitants of hell, whereas sexless gods do not occur. In correspondence with the sensuality decreasing in direct proportion to the height of the heavenly region, the Gevejja and Anuttara gods are short of female deities (see Pannav. 547b ff. and comp. Tñān. 105b and T. 4, 8-10). In the dry account rendered by Jiv. 105b, 177a and 198a, we come across three queer similes which originally belong to a more highly styled text: the female sex is compared with a fire for cooking (*phumphuy'aggi*), the male with a forest-fire (*vana-dav'aggi*), and the third kind with a city-fire (*mahānagara-dāha*).

§67. The number of different senses (*indriya*, Viy. 223b. *āyāna*) amounts to five in all (Pannav. 15).¹ They are unequally distributed among the beings, and that is why the latter are divided into such furnished with one to five senses, as frequently mentioned above, thus forming the fundamentals for approaching the animate world. Beings with one sense own nothing but sensation, those with two have taste added, those with three smell, those with four vision, and those with five the power of hearing.² The first four are comprised as beings with incomplete senses (*vigal'indriya*). The immeasurably small particles of earth, water, fire and wind, and, moreover, all plants are counted among the beings having one sense only. The various manifestations of the elements, all plants and such beings furnished with more senses than one are listed by Pannav. 24a ff. without the intention of completeness, and equally by Utt. 36, while Panhāv. 1 mentions many of them short of a system. As to the organs of the senses the above mentioned sequence is the reverse, and then, accordingly, the first three senses have 2 organs each,³ and the latter two one each. For this Pannav.

1 For details ref. to the inner sense see § 15.

2 The Dig. follow Brahman conception by interpolating the teachings of the 10 *prāṇa*, 5 of which are the *indriya-pāṇa*, 3 the *bala-p* comprising the inner sense (§ 71), speech and body, while the remaining 2 stand for the breath (*ānā-pāṇa* or *ucchuāsa-nihsuāsa-prāṇa*) and the vital force (*āṅga-p*). Comp. Gommatas Jiv. 129, Devanandin on T. 2, 14, comm. on Prāyascittacūlikā. 4. The latter two state the way in which these *p* are distributed among the beings furnished with one to five senses. See JACOBI Tattv. for this passage.

3 The one- to three-eyed beings, referred to by Tñān. 171b, are so in a metaphorical sense.

312a gives *davv'indiya*, which corresponds to *upakaraṇa* given by Umāsvāti T 2, 17.

The materiality of the sense causes Viy. 423b to call their bearers, i.e. the *jīva* in itself and all beings in the Samsāra, *poggalī*. We have to distinguish between the *uvacaya*, i.e. the accumulation of atoms suited for the purpose, and the *nivvattanā*, i.e. the disposition or shaping, which occurs in *ī samaya* of a *muhutta*. The *uvacaya* (not mentioned by Umāsvāti) is called *pracaya* by Devanandin (on T. 2, 17). This author distinguishes (see p. 165) between an inner and an outer disposition (*nirvrtti*), the latter representing the very *pudgala-pracaya*, while the former means the units of the soul with regard of both the extension and shape of the corresponding organ of sense, e.g. the pupil of the eye (comp. JACOBI on the quoted passage). Acc. to Prajn. 294a all that is said about special shapes (*saṃthāna*) refers to the inner disposition shared by all beings furnished with that sense, and, accordingly, the senses of hearing and smell are shaped like certain flowers (*kalambuya-puppha* and *aimuttaga-cāṇḍa*), the sense of vision like a lense (*masūra*), the tongue like a knife (*khurappa*), whereas the sense of feeling as not being distinguished into an outer and an inner disposition (Prajñ.) appears in different shapes (Pannav. 293b and somewhat divergent Siddhasena on T 2, 17). Moreover, there are *bāhalla*¹ and *pohatta*² the one standing for the thickness and the other for the width of accumulated matter. Both are diminutively small, and only the *pohatta* of the sense of feeling equals the measure of the body. The range (*visaya*) is largest with vision where it goes beyond 100,000 *joy*, with hearing it goes up to 12, and with all other senses up to 9 *joy*. This certainly must be taken literally, and just as with the size of the body (s.a.) and the allegedly longest duration of life, this conception refers to legendary individuals. With the objects the organs of sense come into direct contact (*putthāṃ*—and *pavittthāṃ*—

¹ *bāhalaṭā*=*pīṇḍatva* Prajn. 293a. The earlier edition of the Pannav. invariably prints *bāhulya* instead of *bāhalya*.

² Phon.=*prthaktva*, but in meaning=*prthutva* (*vistara*) Prajn. renders both forms promiscuously.

saddāṃ sunei etc., Pannav 298a, Ṭhān 253a),¹ though this is not the case with the sense of vision Acc to Prajn. 298b hearing, however, manifests itself by a slight touch of the object only (*sprṣṭa-mātra*), whereas smelling, tasting and feeling contact the object, as it were, by additionally incorporating in the soul (*baddha-sprṣṭa*, *baddha=ātma-pradeśair ātmikṛta*). This is said to be due partly to the greater fineness and the greater number of particles of the sound-matter, and the exceptional position ascribed to the sense of vision is accounted for by its *aprāptakāritva*, i.e. the faculty of perceiving objects without even touching them.² Also towards the first impressions the sense of vision behaves differently from the other senses (comp § 71) It goes without saying that the different effects of the objects on the senses depend on the different qualities of the former (acc to Vīy. 713 the sweetscent particles are called *ghāna-sahagajā poggalā*), so that, then, the *indīya-visaḥ poggala-parināma* (Jīv 373b) is either pleasing or unpleasing (*surūva*, *durūva* etc),³ and it will pass over from the one into its opposite

All that has been said here about the five senses applies to them in their material respect, i.e. as *davv'indīya*. We shall deal with the *bhāv'indīya*, i.e. the senses in their conditional state, in §71. When germinative life starts, only the latter are existent (Vīy 86b)

§68 Speech, so Pannav. 255b says, originates in the soul, while it becomes manifest in the body in the shape of a thunderbolt, and it ceases to be at the end of the world (*bhāsā jīv'āyā sarīra-ppabhavā vajja-saṃthiyā log'anta-pajjavasiyā*). Most probably the designation of its shape is due to a simile laid down in some other connexion. But what Prajn. actually means is that the world which would be pierced by atoms of speech would then appear in the shape of the *vajja*. All one-sensed beings lack the faculty of speech. For further details see §§61 and 74. Āyār. II 92, 3f. wants to make it quite clear that speech

1. *catthāṃ indīy'atthā putthā veenti*. Here *veenti* stands for *vejjanti*

2. Comp LEUMANN Übersicht p 39a

3. So with *rūva*, with *sadda* it is *subbhi* and *dubbhi* (also Ṭhān 24a), with *gandha* it is *surabhi* and *durabhi*

is existent only the moment when being spoken (*bhāsijjamāñi bhāsā*), but neither before nor after, and this is equally being stated by Viy. 103 b, 621b and 622b. The process of speech as such is dealt with at great length by Pannāv. 260b ff. This process is, to put it briefly, the ejaculation (*nīsarai, nīsrjati*) of substances (*davva*) taken in (*genhai*) previously now being ready either for use or on store). They consist of ∞ atoms (*ananta-paesiya*), occupy the space of 2 units, last for 1 *sam.* and own all qualities possible with reference to colour, smell, taste and sensation. Their reception is meant to bring about a close contact (*putṭha, ogāḍha*), i.e. with the units of the soul (*ātma-pradeśa*, Prajn.), and to it both fine and coarse particles (*anu* and *bāyara*)¹ are subjected which is discussed circumstantially. The reception takes place either with or without interruption (*antara*) in that either reception or ejaculation, or both reception and ejaculation occur within 1 *sam.*, and then the particle ejected as speech will invariably be the same particle as taken in within the foregoing *sam.*, and, by the way (267a), they will belong to the same content of speech (true, false, etc.) for which they were taken in. Their destiny depends on the intensity of speech. As we learn from Prajn. on Pannav. 262b and from Vy. on Viy. 612 b, when speaking low the particles of speech leave the mouth in coarse portions (*abhinna*), but they do not reach far and will perish soon, whereas when speaking loud they are finely divided (*bhinna*), and in this case speech will increase infinitely and reach the boundaries of the world.²

§ 69. The supposed duration of human life goes far beyond any experience whatever, as has been mentioned before. For together with animals furnished with five senses they may live to reach 3 *paliovama*, thus surpassing the Vānamantara-and the Joisiya-Gods by the double. The Bhavanavāsi-gods,

1. Prajn. appears to be hesitant (263b) in concluding from *bāyara* that the word concerns *visible* particles, and so the AUTHOR renders but the view of the *mālaṭṭikākāra* that aggregates of a smaller or either larger number of units are being meant

2. Comp. also Thāp. 63a.

however, come up to about 2 *sāgarovama*, and both the inhabitants of hell and the *Vemānya* even up to 33. The figures referring female gods are lower. One particle of earth will reach 22,000 years, one particle of water 7,000, one particle of wind 3,000, and a plant 10,000. One particle of fire will live for three days and nights at the longest, a two-sensed being for 12 years, if it has three senses for 49 days, and if four for six months. This lifetime (Pannav. 4) is called *ṭhu*, and this word is even used where later authors speak of *bhava-sthiti* in contrast to the *kāya-sthiti* which means the sum of all existences sharing the same characteristic feature following each other (§ 93).

Apart from legendary opportunities, human life has three stages (*jāma*, *vaya*, Āyār. 33, 23, 50, 3 f b, Thān 128a), though they do not refer to the physical but to the monastic life. So at least acc. to the comm. where they are said to embrace the time from the 8th to the 30th, from the 31st to the 60th, and from the 61st year until death.¹ For nobody will be a monk before his 8th year (§ 138). The actual stages of life are the ten *dasā* called *bālā*, *kiḍḍā*, *nandā*, *balā*, *pannā*, *hāyanī*, *pavanā*, *pabbhārā*, *munmuhi* (*mammuhī*), *sāvanī* (*sāyanī*) (Tand 16a, in one Śloka Thān 519a, in one Gāhā Tand 16a=Dasav. nīj. 10). The second half of the sequence indicates a decline of the senses, loquacity, bending of the body, expectation of death,² and the last bed, though it is frequently interpreted by the comm in a far-fetched manner. The appointment of these ten stages most certainly goes back to the theory of assuming a maximum age of one hundred years (Tand 17b 33a). Half of this time is spent by sleep, and for childhood and old age³ another 20 years have to be taken into account (Tand. 33a). From the metrical and hence, owing to the position of the words, liberal compound *thiya-jovvāna-keṣ'avatṭhiya-naḥo*⁴ (Jambudd 224b) we

1 Sthān 128b sees in *jāma* the 4th part of either night or day, though this does not harmonise. The *vayas* (see the same) go up to 16, 70 and 70 + x years.

2 With Haribhadra on Dasav nīj = *mṛt-mukhī* (*mṛn-*, *mṛn-mukhī*).

3 Vīy 699b means physical pain in contrast to psychical pain, the *soga*.

4 In print we find *kesa-avatṭhiya avatṭhiya-k-n* would be grammatically more correct. We have a *Veḍḍha* which continues by saying *havaṃ ya savva-bhaya-vippamukko*.

learn to understand that everlasting youthful vigour will go with the non-growth of hair and nails which is one of the special qualities of a Kevalin (Samav. 60b).

One list of 16 different diseases is rendered by Āyār. I 27, 16ff while another one is delivered by Vivāgas. 40b Here we come across physicians trying to practise their profession in many different ways. In this connexion we may note that, as Ṭhān. 427 has it, the main subjects of therapeutics are the following eight the science of children's complaints (*kumāra-bhucca*), the science of internal diseases (*kāya-tigicchā*), surgery both small and large (*salāi* and *salla-hattā*), toxicology (*jangoli*), psychotherapeutics (*bhūya-vijjā*), the science of cautery (*khara-tanta*), and elixirology (*rasāyana*) They are nearly conform with the eight parts of the so-called Āyurveda (JOLLY, Medizin, Grundriss III 10, P 13). Medical science (*tigicchīya*), by the way, plainly appertains to the *pāva-suya-pasanga*)¹ (Ṭhān. 451a). As to the causes of diseases Ṭhān. 446a lists the following nine a sedentary way of living (*accāsanā*), bad food, too much sleep, too little sleep, constipation, anury, marching (*addhāna-gamana*), sitophobia, and the addiction to sensual enjoyments (*indiy'attha-vikovanayā*). The subdivision (Ṭhān. 265a) into *vāiya*,-, *puttiya*- and *simbhīya*-diseases and such in which different factors referred to in this connexion take a share, goes back to the all-Indian system. Vīy 634 a (=Ṭhān. 265a) says that madness (*ummāya*) ensues from being possessed by somebody (*jakkh'āvesa*) or either from the realisation of the so-called Confusing Karman (§ 87),² the former kind being more pleasant (*suhaveyanatarāga*) and the one to get rid of more easily (*suhavi-moyanatarāga*) than the latter The state of being possessed by something is brought about, so the author adds, by a god sending impure atoms (*asubhe poggale pakkhivai*) which are stronger with inhabitants of hell and gods (*mahiddhiyatarāga*) than with elemental beings(!), animals and men. The idea probably is that, in agreement with the conceptions of all primitives, the material body of a malignant individual takes posses-

1. For 25 more all belonging to fortune-telling (see Samav. 49a).

2 This in addition to a concrete sin also in Ṭhān 360b.

sion of a sound one. In Kappa 6, 12 we find *jakkh'āitṭha* and *ummāya-patta* being listed side by side. In this connexion the Yakṣa is not classed as a benevolent being as he is among the Vānamantara-Gods (§ 112), but stems from the field of popular belief. That a Kevalin were possessed by a Yakṣa was a contention established by antagonists (Viy. 749a) probably judging by outward appearance and at any rate intending to deprive his maxims of their credulity.

Physical death is scarcely referred to. We are merely told that the soul (*āyā*) leaves (*nijjāti*) the body simultaneously by its feet, its thighs, its chest, its head and all its limbs Acc. to Thān. 89b and 346a this indicates that the soul henceforth will remain either in hell or among animals, human beings and gods, and that it will enter the realm of the Siddhas (Thān. 346a), though, in fact, it means nothing but a genuinely primitive conception.

§70. *The Soul.* The Theory of matter ought to be concluded by dealing with the Karman. But since, for times eternal, it has been closely connected with the soul, the latter must be dealt with first. The soul as the bearer of life is called *jīva*, and since it is animate, a living being is called *jīva* (beside *pāna*, *bhūya*, *satta*).¹ this can be concluded from the somewhat playful subsumptions made by Viy 285a. For the units of the soul and their expansion see § 58. Their total number remains constant for ever, it neither increases nor decreases, while within the different individual grades and classes of beings both equality and either decrease or increase naturally will occur, with the exception of the delivered souls whose number is not subjected to any decrease (Viy. 244a).

We have to distinguish between the soul and *āyā*, the I, though the dividing line is not always clearly discernible, thus when the moral monastic duties serve the *āyā* (*āyā sāmāie* (etc.), *āyā sāmāiyassa* (etc.) atṭhe Viy 99a), when, furthermore, all bodily and spiritual doings work out in the I (*n'annattha āyāe parināmenti* Viy 777a), and, especially, when *jīva* and *jīv'āyā* are explicitly equated with each other (Viy. 723b)¹, The I is

¹ The *jīva* is often called *āyā* (*ādā*) by the Dig

more strongly stressed when the *āyā*¹ as such (*daviy'āyā*) as well as in its connexion with passions, activity, cognition, and other abstracts is quoted as *kasāy'āyā*, *jog'āyā nān'āyā*, etc. (Viy. 588a), and when all of them prove to occur or either not to occur simultaneously with the individual; comp also the *ahigaranī āyā* Viy. 288b. Cognition, non-cognition, and belief, so it seems, permeate the personality, so that these definitions equal one another: *nāne* (nom.) *āyā*, *annāne āyā* (this with one-sensed beings) *daṃsane āyā* (Viy. 588b). In Viy. 621a, 622b we read that speech and the inward sense both mean something definitely different from the I (*no āyā bhāsā*, *n.ā mane*, *annā bhāsā*, *annā mane*), whereas this does not necessarily refer to the body (*āyā vi kāe anne vi kāe*) which may be explained by its external and constant working. The same introductory formulation immediately followed the text of Viy. 588b mentioned above (*āyā bhante Rayanappabhā puḍhavi annā R p. ?* Viy. 592b), but it was intended to serve a completely different purpose. Here *āyā* stands in order to express that an object marked by its inherent qualities has a dialectic reality in contrast a. o. to the case that foreign qualities belonging to another object are attributed to it (*Rayanappabhā.) appano ādiṭṭhe āyā*, *parassa ādiṭṭhe no āyā*. This theory falls into the sphere of Syādvāda (§ 77).

§ 71. The spiritual function, *uvaoga*, is the essence of the soul, though acc to T. 2,18 *upayoga* also specifically means the functioning of the senses likewise underlying spiritual imagination. Along with the *labdhi*, the faculty of practising, the *upayoga* represents the sense considered as condition (*bhāvēndriya*). Pannav. 308b f. says *laddhi* and *uvaog'addhā* the latter meaning the time during which a sense (to be added when conceiving) is active. The quickest to react is vision followed by hearing, smell, taste and feeling. Between its quickest and its slowest possible activity there lie the slowest performances of the same row. Both for the *davv'indriya* (§ 67) and for the *bhāv'indriya* the Pannav. (311b-315b) elaborately demonstrates how many of

1. *āyā* is declined as a fem in the text to be referred to.

each kind were, are and will be existing (*atīta*, *baddhellaga* and *purekkhada*) in the beings during their past, their present and their future. The number of the latter depends on the number of existences still to follow the present one until salvation takes place.

Next to the sensual organs, moreover, the inward sense or either the reason is essential for spiritual imagination. Umāsvāti T 1, 14, 2, 22 calls it *anindriya*, 2, 25 implicitly *manas*. Pannav renders *sannā*. It is without any organ. With animals and human beings *sannā* is connected with their coming into existence by procreation, with the gods and the inhabitants of hell with their possessing it in their pre-existence (Prajñ 534a f.). Those who possess the *sannā* are called *sannī* and so the Kevalin is *no-sannī-no-asannī*, since he has come to be beyond the *sannā*. The very brief 31st chapter of the Pannav. is accordingly called *Sannī-paya* in contrast to Pannav 8, the *Sannā-paya*. The latter, as must be mentioned here, deals with the 10 *sannā* (see also Thān 504a) as the primitive emotions or instincts (*ābhoga* Prajñ) owned by all beings (with the exception, of course, of the Kevalin and Siddha). They are directed towards nourishment, fear, sex, splendour (*pariggaha-s*), anger, pride, deceit, greed, worldliness and all carnal desires (*loya-and oha-s*).¹ Of the four first fear shows up acutely with the inhabitants of hell, nourishment with animals, sex with human beings, and splendour with the gods (*osannaṃ karanam paducca*), the remaining being chronic (*samtai-bhāvaṃ p*). Acc to Thān 277a (comp. Samav 9b) the mentioned four depend, apart from depending on the resp Karman, on imagination aroused by information, on thinking of it independently, and, furthermore, on the concrete causes as cowardice, empty stomach (*omakotthayā*), too much (*cita*) flesh and blood, and on possession (*avimuttayā*).

§ 72. Acc to T. 1, 15 imagination, no matter whether it depends on the activity of the five outward senses or on that of the inward sense, proceeds from the primary perception (*avagraha*) over the will to cognition (*īhā*) and ascertainment

¹ Sthān 505a calls the *ogha-samjñā* a function (*upayoga*) of belief; the *loka-s* a such of knowledge, so does Prajñ 222b

(*apāya* or *avāya*) to the act of imprinting the perception in the mind (*dhāranā*)¹. Though this sequence corresponds with Thān. 281b, 363a; Vīy. 571a; Nandī 168a, it does not agree with Pannav. 15, 2. Here we find first the *indīya-ogāhanā* (309 a), followed by *avāya*, *ihā* and *oggaha*². That is to say, the sequence is just the reverse, and *ogāhanā*³ rendered in the Prajn by *avagrahana* without being explained more closely, is replaced by *dhāranā*. The author of the Pannav takes the right to class this genesis of imagination in his chapter about the senses from their having a fundamental share in imagination. But with the *oggaha* this does not apply to all senses as with the other three stages. Here *atth'oggaha* and *vanjan'oggaha* are distinguished from each other, the first constituting a distinct and the latter an indistinct primary sensation towards the object. The sense of vision, however, is not capable of an indistinct primary sensation but of a distinct one only. Nor is the inward sense (*no-indīya*, Pannav 310 a; T 1, 18 f). The reversion of the sequence in Pannav. mentioned above, is due to the fact that the figure of five determined with *indīya-uvacaya*, *-nūvattanā* and *-laddhi* could continue to hold good with *ogāhanā*, *avāya* and *ihā*, until finally with *oggaha* the sequence ramifies. It was a mistake, however, to maintain it for the *ogāhanā* etc. without adding the *no-indīya*. In the Nandī (175 b ff) this has been done, and the inward sense justly shares in the will to cognition, the act of ascertainment and the act of imprinting the perception in the mind. Here, by the way, we are also told (177a, 184a) that the "primary perception" lasts only 1 *sam.*, while *ihā* and *avāya* remain below 1 *muh*, whereas the *dhāranā* will last for any length of time.

The function of the four stages of perception is the following: acc. to Thān. 363a *oggaha*, *ihā* and *avāya* occur rapidly (*khīppa*) and analogically (*dhuva*) in every new case, *dhāranā*, however, permanently (*porāna*) and intensively (*duddhara-gahana*). But all four are composed of single perceptions

1 Comp. LEUMANN Übersicht p. 38b

2 In print we read *uggaha*

3 In the Abhidhānarājendra incorrectly rendered as *uggāhanā*

(*bahu*) or either decompose them (*bahuvrīha*), they are undoubted (*asamiddha*), and they do not occur by virtue of conclusion (*amissiya*) T 1, 16 renders *anukta* for *asamiddha*, and the distinction concerning the *dhāranā* is missing, but instead also the reverse applies to the six different functions

§ 73. Cognition comes on through imagination, and so far as it keeps within the frame of the true teaching, Umāsvāti and his successors generally call it by the name of *mai-jnāna*,¹ whereas in the Canon it appears as *ābhinihoḥiya-nāna*. But in connexion with its negation called *mai-annāna*, which we shall deal with later (§ 79), it is also defined as *mai-nāna*. The other kinds of cognition to which the same assumption pertains, are called *suya-nāna*, *ohi-n.*, *maṇapajjava-n* and *kevala-n.* (Viy. 342b; Thān. 347a, Rāyap 130a) While the Pannav (525a) does not deal with it systematically, all five kinds are given their locus classicus in the Nandī (65 ff) where (144a) the *ābhinihoḥiya*, by the name of *buddhi*, is being subjected to further subdivisions which, however, we abstain from dealing with here.² Nor can we do so with the other *nāna*. The greater importance lies in its close relationship with the *suya-nāna* in its meaning of communication or evidence according to cognition. Both are equal in their relative existence (Pannav. 136b), what is more, they only occur together. *jattha ābh-n*, *tattha suya-n*, *jattha suya-n*, *tattha ābh-n*. But this sentence of the Nandī (140a) is immediately restricted by quoting a half-sloka of the *āyariya* according to which the *suya* is preceded by the *mai*, but not the *mai* by the *suya*. Umāsvāti T 1, 20 and on T. 1, 31 subscribes to this view. There are various ways as to how knowledge from outside the I may be conveyed. But the 14 possibilities of the *suya* as referred to by the Nandī 187a ff. do not exclude one another (comp 187a 13 f) They concern articulated, reasonable and spiritual evidences (the latter pertaining to, and corresponding with, the Jain teaching) and such that are contrary to these

1 For synonyms see T 1 13

2 For these *uppatiya*, *veṇaya*, *kammīya* and *pariṇāmiya* = *buddhi* comp. also Thān 281 a, Viy 571a

qualities. The inward sense serves the transformation of such evidences into cognition, and this seems to be meant in T. 2, 22.

§ 74. As to the “articulated” evidences (*akkhara-suya*) mentioned above they are formed by written (*sann’akkhara-s.*) and oral (*vanyan’akkh-s*) ones as well as by such consisting in an object conceived by the senses releasing its denomination (*laddhi-akkh.-s*).¹ We refer to this simply in order to attach the consideration frequently mentioned in the Canon about the expressive content of language. The earliest comments on this subject appear in Āyār 11, 4; they are closely related to Dasav. 7.² Resting on the monastic discipline they are, to a great extent, based on the primitive distinction between the True (*sacca*) and the Wrong (*mosa*); in between we find what is made up of both the True and the Wrong (*saccā-mosa*), and beyond all three there is what is neither true nor wrong (*asaccā-mosa*) (Āyār. II, 91; Thān. 183 b). They are the four *bhāsājjāyā*³ Pannav. 11 deals with them, as with speech altogether, more systematically, though, on the whole in a strikingly ill-assorted way on the whole. Of those four contents the first pair is attributed to “distinct” (*paṇṇattiya*) and the second to “indistinct” (*apaṇṇ*) speech (Pannav. 255b). From their numerous sub-varieties⁴ it follows (a o.) that a mode of speech springing from emotion is by itself understood as *mosā*. Next to true speech a Kevalin (§ 81) avails himself of the *asaccāmosa* only (Vīy 749a). All animals with two to four senses and beings with five senses express themselves in the “neither true nor wrong” way, but the latter will employ the first three modes just as well (Pannav. 260a) provided they have learnt to do so or carry along with them a

1 Eg, *yac cakṣuṣā āmra-phal’ādy-upalabhy’ “āmra-phalam” ityādy-akṣarānuvuddham śabdārtha-paiyālocaṇ’ātmakam vijnānam tac cakṣur-indriya-labdhy-akṣaram*, Nandivrtti 189a

2 Dasav is later than Āyār. If in its slokas it contains such pādas as are scattered in the prose of Āyār (Āyār 93, 2f = Dasav 7, 2, 94, 24f = Dasav 7, 26) the latter represent an ancient stock, comp LÜDERS, SPAW 1913, p 1007

3 Frequently written *bhāsa-jjāyā* Acc to Vīy 622b the four modes also apply to the *nāṇa*

4 In their discussion Prajn 257b mentions that in Konkan *piccam* is said for *p ayas* and that by the *gopāla* the lotus is called *aravinda* only. Nearly the same is said Praśn 117b

higher ability. The aforesaid fourth mode has twelve cases as address, order, request, question etc. Communication (*pannavanī*), too, belongs to the *asaccāmosa*. But the problem was whether such communications were not rather *mosā bhāsā* in case the natural gender of the object was not expressed as in the plural forms *gāo*, *miyā*, *pasū*, *ṣakkhī*. Pannav. 248b f. denies this and probably dispels even other doubts as to the congruity of grammatical and natural gender and number. Vy. 499b equally affirms that the expression of an intention, e.g. "we want to lie down" (*āsaissāmo*) is a *pannavanī bhāsā* and not "wrong". Apart from this kind Pannav. 246b speaks of the *ohārīnī bh.*, i.e. the statement giving as examples "I mean", "I think" and the like. Such a statement may express any of the four contents (modes) — a true statement will serve (*ārāhinī*) the teaching, a wrong one will oppose (*virāhinī*) it, etc. It goes with the sphere of *ethics* that all four modes of speech, and consequently the mode of wrong speech as well, are admitted, provided they are employed in a pious way of mind (*āuttaṇi=samyak*), while even true speech coming from a sinner's mouth will count for nothing (Pannav. 268a). It goes with *discipline* that a monk charging himself with abstinence for one month (*māsiyā bhikkhu-ṣaḍimā*, § 157) may express himself by four ways only — by begging for alms, by putting a question, by making a request for lodging and by giving an answer (*jāyanā*, *pucchanī*, *anunnavanī*, *puṭṭhassa vāgaranī*, Dasā 7 I=Thān. 183b).

§ 75. The *suya-nāna*, which we conclude herewith, forms a unity with the *ābhini-bohiya nāna* thus resulting in indirect or *parokkha* cognition (Nandī 140a, T. 1, 11), indirect inasmuch both rest on outward conditions. In imagination they represent the organic fundamentals. The three modes of cognition following *suya* (Nandī 166 ff.) — we shall deal with them in § 78 ff. — are direct (*paccakkha*) since they are not based on such conditions. Hence cognition is called twofold (*duviha nāna* Thān. 49b). Umāsvāti in T. 1, 10 calls *pratyakṣa* and *parokṣa* the two *pramāṇa* or media of cognition. Anuogad 151a ff. deals with the *pramāṇa*, but of his varieties *davva-*, *khetta-*, *kāla-* and *bhāva-pp.* (also Thān. 198a) only the one mentioned last (210 a) can be

taken into consideration here. There the *paccakkha-pp.* (211a)¹ originating partly from the five senses (*indriya*) and partly from another source (*no-1.*)—in the latter case superior forms of cognition are concerned—stands side by side with *anumāna*, *ovamma* and *āgamma*, i.e. conclusion, comparison and tradition, which altogether might justly have been comprised as *parokkha*. This word, however, fails to appear in the composition of the Anuogadāra. Conclusion (212a), to say but this, is *puvvaṇṇam* “resting on earlier (sensual perception)”, *sesavaṇṇam* “resting on exclusion” and *ditthasāhammavaṇṇam* “resting on abstraction”, each word being explained by examples

§ 76. The *nāna-ppamāna* mentioned in this connexion adds up to the *jīva-pp.* by going together with *daṃsana-* and *caritta-pp.*, and the *jīva pp.* again adds up to the *guna-pp.* by going together with the *ajīva-pp.* (colours, smell, taste, feeling and shape). The *guna-pp.* ranges first among the sub-varieties of the *bhāva-pp.* standing alongside with the *naya-* and *saṃkha-pp.* We pass over the latter, the “number”, in order to turn to the *naya* or “modes of contemplation” In Utt. 28, 24 *ppamāna* and *naya* stand side by side “The *naya*’s are methods intended to represent an object by accentuating of all its different aspects the one only which the teacher has in mind for his special purpose, whereas the others being irrelevant to him remain unconsidered” (JACOBI with ref to T. 1, 35) *Naya* is known even to Vīy. though not in its conventional designation and number (see below) So, when Vīy 302a speaks of the *vocchutti-* and *avvocchutti-nay’atthayā* (§ 77) The *necchaya-n.* and the *vavahāriya-n.* (Vīy. 748a), i.e. contemplation in theory and praxis, approach the later usage of the word more closely. As to contemplation in praxis a sensual quality of the object stands in the foreground, whereas contemplation in theory starts from all qualities possible Thus, while a bee, for instance, is black in praxis, it is of all colours, smells, etc. in theory, so that, then, the definition may be supposed to be due to some process of elimination. Along with the *vavahāra-n.* we shall presently

¹ A reference to this passage is given in Vīy 221b where it was caused by the word *ppamāna* in the preceding passage of quite a different character.

come to know also the *ujju-sutta-n* and others. Probably the *Viy* was familiar with the latter, too, for the definition mentioned just before most certainly goes back to the catchword *ujjuya* of the preceding *sūtra*

Now, in *Anuog.* 264a ff, *Thān.* 390 b; *Āv.* 754 we come across the seven *mūla-naya* called *negama*, *samgaha*, *vavahāra*, *ujju-suya*, *sadda*, *samabhīrūḍha* and *evaṃbhūya*¹ Instead of *ujju-suya* sometimes *ujju-sutta* is being read corresponding to the Sanskrit form. The resp 100 subvarieties mentioned by *Āv.* 759 (*Sthān.* 390b) on account of a certain “main-*naya*” —while according to others their number is said to be but 500 in all—are merely a fictitious conception presumably resting on the fact that in praxi the ways of contemplation are often incomplete and may intercross, etc. The definition of the different ways set forth by *Devasūri*, one of the later logicians, has been rendered by *JACOBI* on *Sūtra T.* 1, 35² As to the *naigama*, it follows from *Umāsvāti*’s *Bhāṣya* and other passages that this word stands for the so to speak “conventional”,³ though often figurative way of contemplation not distinguishing between qualities of genus and species. The *samgraha* has nothing in mind but the generic notion, the *vyavahāra* nothing but the qualities of the species at hand, and the *rju-sūtra* nothing but the object in its present state and only so far as it is mine. The *śabda* or *sāṃprata* strictly clings to the sense of the word given to it either by context or convention, that is to say, synonyms are accepted, while the *samabhīrūḍha* relies on the etymology of the word contrary to words of the same meaning, and, finally, the *evaṃbhūta* exclusively takes a word as it wants to be taken according to the activity expressed by it. *JAINI* points out that the modes of

¹ *Samav.* 128b in an incomprehensible way quotes three of the above mentioned names in the alleged table of contents of the *Diṭṭhi-vāya* (§ 38). Perhaps this has caused the reference to be made to it concerning all *naya* *Āv.* 760

² Comp. also *JHAVERI*, *The First Principles of the Jain Philosophy* (1910), p. 53 ff, *JAINI* on *T.* 1, 35 (*SBJ.* 2, 45 ff.)

³ *Siddhasena* (on *T.* 1, 65). explains *naigama* = *janapada* *Āv.* 755 (= *Anuog.* 264a) says *negehiṃ mānehiṃ minai* = *nega-ma* (1). Others explain by *naka-gama* “having different species”. Comp. *Satis Chandra VIDYA-BHUSHANA*, *Hist. of the Mediaeval School of Indian Logic* p. 11 and *Festschr.* Bhandarkar p. 157 f.

contemplation narrow by steps from 1 to 7.¹ But we also find an internal classification according to which 1 to 3 are concerned with the substances and 4 to 7 with their conditions (*dravyārthika-* and *paryārthika-naya*), and a second one concerning examinations of the object—1 to 4—and its relations—5 to 7—(*artha-* and *śabda-n*) Finally Umāsvāti offers 5 to 7 subvarieties of the *śabda*, to say nothing of those regarding the *naigama*.

In the Anuog, however, all seven enjoy equal rights, save that the last three are comprised as *tinnī sadda-nayā*. We now turn back to the *pamāna*-specification rendered by Anuog 222 b ff. where we find the *naya* being illustrated by way of three examples. They strike us by their primitiveness when compared with the subtlety of classic definition. Of all examples the third one, the *paesa-ditthanta*, is the most searching. 1 For the *negama* there exist space units (*paesa*) which pertain to all substances (*davva*) and to any part separated from them (*desa*). Thus, beside the *paesa* of *dhamma*, *āgāsa*, *jīva* and *khandha*, the *negama* quotes as the sixth the *paesa* of *desa*. 2 The *saṃgaha* keeps within the number of five (*pañcanhaṃ paese*), since the *desa-pp* pertains to all five substances: if my servant buys a donkey, then the latter is mine, too.² 3 The *vavahāra* does the same, though it speaks of the *p* as being five-fold, for if five men possess something in common, then also a part of it belongs to them in common. 4 For the *ujju-suya* the *p* is, as the case may be (*bhāyavva*), one of *dhamma*, of *adhamma*, etc. 5. The *saṃpai-sadda-naya* says *dhamme* (etc. up to *khandhe*) *paese*, *se paese dhamme* (*adhamme*, *āgāse*, *no-jīve*, *no-khandhe*), the space unit forms the corresponding substance and represents it (save the two last ones owing to the diversity of the *jīva* and the *khandha*). 6. The *samabhirūḍha* maintains that in the words of *dhamma* (etc.) *paese dhamme* may be taken for a loc, i e in the nature of a Tat-purusa, or either for a nom, i e in the nature of a Karmadhāraya. As the first possibility is out of the question since it would qualify *dh* and *p* as differing from each other, there remains

¹ *Lōc cit* p. 47

² *dāseṇa me hāro kīto dāso vī me hāro vī me*, Vyav bh IV 25a (quotation).

the second according to which for *dhamme* (etc.) *paese* we have to say *dhamme* (etc) *ya se paese ya se*, and so forth as in 5 7 For the *evam̐bhūya*, finally, *desa* and *paesa* are beyond discussion (*avatthu*) since it knows but *dhamm'atthikāya* (etc.) as a whole (*savvam kasinaṃ padipunnāṃ niravasesaṃ ega-gahana-gahiyam*).

The two examples of the bushel (*patthaga*) and the night-stay (*vasaṭi*) preceding in Anuog 222b ff comprise both the *naya* 1 to 3 and 5 to 7, and so they do not give us an exhaustive information about their standpoint. But they compensate for it by distinguishing different grades of quality in a *negama* and, implicitly, in the *vavahāra* coinciding with it. We speak of a genuine (*visuddha*) *negama* when somebody being asked what he is hewing there with his axe, gives an answer by saying a measure for a bushel (*patthaga*), the *neg* becomes ever more genuine (*visuddhatarāga*) when, with the same answer given in each case, it is being asked what are you hewing? what are you hollowing? what are you smoothening? and so on up to the point of carving the owner's name (*nām' āvudho patthao*). A *neg* is not genuine (*avisuddha*), however, when the question: where do you go? is being answered by saying I am going for a measure for a bushel (*patthagassa gačchāmi*). In the second example the *neg* is the more genuine the more precisely the question *kahiṃ bhavaṃ vasaṭi?* is being answered by pointing out to the upper world, the Jambuddiva, Bharaha, South-Bharaha, *Pātaliputra*, the House of Devadatta and, finally, its bedroom (*gabbha-ghara*), whereas the answer in the word (*loge*) will render a *negama* not qualified as genuine ¹

§ 77 By means of a *naya* a standpoint is gained allowing of making some statement about an object, though we must be careful in distinguishing from it what is understood as the contemplation of the object as such from different angles. It is in the nature of the matter that the latter is the more original, though it is confirmed by the text. But, to be true, we find it fully developed, along with the *naya*-technique, also only as late as in Anuog., and it is even later that it is given the name of

1. Anuog 17 a For all three examples see also Āvaśy 378a ff

nikkheva (e.g. Dasav. 111j 9). *Umāsvāti* T 1, 5 does not refer to it. Acc to Anuog 250 a ff *nikkheva* first means nothing but a contemplation more or less comprehensive. Yet we intend to start already here by signifying in this way the technique of discussing an object from four standpoints as is introduced by Anuog. These standpoints are called denomination (*nāma*), effigy (*thavanā*), substance (*davva*) and condition (*bhāva*). The *āvassaya*, the indispensable, may serve as an example (Anuog. 11 b ff). *Nām'āvassaya* is a denotation saying that a being or a thing is "indispensable". *Thavan'āv.* is the figurative representation of something indispensable. *Davv'āv.* is something indispensable, be it from the standpoint of a monk (the *Āvassaya* formulae), be it from that of a dissenter (the obligatory religious rites) or be it with regard to worldly activities (the morning toilet). *Bhāv'āv.* says what is emotionally realised as being indispensable. In the Jain Creed the pious fulfillment of the *Āvassaya* formulae, for the non-Jain epic lectures (*puvvanhe Bhārahe, avaranhe Rāmāyanam*) or either a ritual act practised any time from a religious urge.

The quaternary *nikkheva* is extended by "place" (*khetta*) and "time" (*kāla*), occasionally also by "way of being" (*guna*), comp. Vīy. 147b. The world, the soul and both the residence of the Siddha and the *siddha* themselves are *davvao* and *khettao* finite but *kālo* and *bhāvao* infinite (Vīy 177b); the souls are in themselves everlasting, whereas with regard to their condition they are not (Vīy 299b). Less uniform than are these disquisitions are statements directly gained from the subject in question: the beings considered as a whole (*avvocchittanay'atthayāe*) are everlasting, while when considered individually (*vocchitti-nay'a.*) they are not (Vīy 302a), or, among others, food and drink (*oyana, kummāsa, sura*), according to their origin (*puvva-bhāva-pannavanam paducca*), must be called an accumulation of vegetable or, resp., watery substances, and after being heated a community of fiery substances (Vīy 213a). In the latter argument as well as in some others including such that do not reflect on the same object by approaching it from different points of view as *davva* and *bhāva* (e.g. Vīy. 65b, 103b, 110b;

also in the Thān, Jiv 731a; Dvā 6), the subject is characterised by the words *iti vattavaṃ syā*. "from a standpoint it is predicable that . . ." ¹ The word *syā* standing for itself and occurring in pairs and repeatedly in the form of *syā'ce g nreṣyā siya sāsyaṃ siya asāsyaṃ*, (Viv 302a) has become the motto for the theory of the relative validity of any statement. But now, apart from the word *syāt*, the negation *anāstya* is significant of the seven formulae of the *syād-vāda* which will be mentioned presently. But just as the formula *vattavaṃ syā* belongs to the sphere of the *Syādvāda* already so does *anāstya* in the discussions rendered by Pannav. 323b ff; Anuog 54 ff. From the latter we may take as an example that a mere dual of equivalent elements (e.g. an aggregate consisting of two atoms) eludes observation from the view of the "sequence" (*ānūtānī*), i.e. that it lies "beyond what is predicable" (*du-jesie anāstavaṃ*), since this dual is neither a sequence as is the case with three atoms and more nor none as with one atom. While thus the building stones of the *Syādvāda* are existent in the Canon already, yet the latter is still unaware of the completed building bearing this name or that of the *Anekāntavāda*. Most certainly the invention of this theory of relativities (as it is frequently called in a somewhat playful manner) goes back to an early time, probably to Mahāvīra personally, but in its fully developed shape as the so-called *sapta-bhaṅgī* it appears only later as an anonymous creation. As to its origin SCHRADER, who noticed the relation with the *vikalpa* of the Ājñānīka, pointed to the logics of the southern Indian Digambaras developed in shrewd dialectic argumentations ². The *sapta-bhaṅgī* says that an object (a *ghata*, of course) seen from a chosen standpoint (*syāt*) can be signified (1) as existent, (2) as non-existent (i.e. regarded under the aspect of another object) and (3) as both existent and non-existent (the former seen under its own aspect and the latter under alien ones). The three corresponding formulae are *syād asty eva*, *syān nāsty eva*, *syād asti nāsti ca*. The two statements of

¹ The AUTHOR failed to recognise this in "Worte," p. 25, ann.

² Philos. p. 51. The reference to the *Sūyagadānuj* made by Satis Chandra VIDYABHUSANA (Logic p. 8) is misleading.

(3), however, can be made by letting the one follow the other, whereas they cannot possibly be made simultaneously. Under this aspect the object (*ghata*) (4) defies description *syādavaktavya eva*. The remaining three sentences are identical with the first three by adding *avaktavya*. This means to say in sentence (5) that a thing exists but that, apart from this positive quality with reference to another thing, it has a negative quality as well, and that it is impossible to express both qualities simultaneously *syād asti cāvaktavyaś ca*. Sentence (6) *syān nāsti cāvaktavyaś ca* is just the reverse on the basis of non-existence. Sentence (7), finally, expresses that an object as in (3) can be taken either as positive or negative, though not simultaneously but only successively. *syād asti nāsti cāvaktavyaś ca*. The wording rendered follows Vimaladāsa's Saptabhaṅgītaranginī (p 2), except for some slight difference it represents the backbone of the Syādvāda literature ¹

§ 78. Sthān 347b, Nandīvr̥tti 65b and others are correct in defining the name of *ohi*-cognition by *ātmano'riha-sāksātkarana-vyāpāra* and by equating *avadhi* with *avadhāna*. The *ohi*-cognition is inherent in both the inhabitants of the world of gods and those of the different spheres of hell owing to this form of existence of theirs,² and as such it is called *bhava-paccaya* (Nandī 76b; T. 1, 22). But the two preceding forms are equally inherent in these inhabitants (Vīy 343b). However, due to a certain behaviour of certain Karman species in the soul, the *khaḍvasama*-condition (§ 182), the *ohi*-cognition occurs as *khaḍvasamiya* (Thān 49b) also in human beings and animals with five senses (Vīy 343b). It consists (Nandī 97a) in the

1 Representations and criticisms of the Syādvāda and S-bh a o will be found in any history of the Indian philosophy, e.g. in S. RADHAKRISHNAN, Indian Philosophy, I, 302ff. First ref. made by R. G. BHANDARKAR, Report 1883-84, p. 95, acc. to which JACOBI SBE 45, XXVII. Most recent books are M. L. MEHTA, Outlines of Jaina Philosophy, Bangalore 1954 and THE SAME, Jaina Psychology, ib. 1957.

2 The word for its application by a godlike person is *ohiṃ paunjabī*. It draws the object closer by *ohunā ābhoeṃ* (*ābhogayati*, Jambudd 214a).

cognition (*jānai pāsai*, comp § 32) of ∞^1 up to all bodily substances (*rūvi-davva*, comp T 1, 28) in a space ranging from the smallest to the widest possible extension² during a time comprising all stages from the smallest up to extremely large extents and, moreover, in the past as well as in the future, and such in ∞ conditions (*bhāva*), though they are all but the ∞ fraction of all preceding conditions³ The *ohi*-condition is acquired when the teaching of Mahāvīra was conveyed *soccā* (Viy. 432a), but also *asoccā*, if only the Karman conditions mentioned above are fulfilled The true believer possesses *ohi* wherever he may be always in the same intensity, or either the opposite of both is valid This results in six possibilities (see JACOBI on T 1, 23, Thān 378a) partly explained by Nandī 81a ff by way of comparisons The same is done by Umāsvāti and Devanandin (p 123) What they call *anavasthita* is called *paḍivāi* by Nandī, but while in doing so a certain up and down is presupposed by the former, the latter expresses thus a non-recurring involution (*pratipatati*). As reason for some of those possibilities part of which have even sub-species Siddhasena refers to the corresponding variety of the underlying *lhaḍvasama* condition, and it may be taken for granted that this goes for all. He who owns the faculty of the “transcendental cognition of bodily things” which represents the *ohi*-cognition (JACOBI on T 1, 22) is capable of lifting himself up to different mountains, of letting himself down into the deep and of dwelling in the *kamma-bhūi*, just as he is capable of multiplying himself from twice to ten times his size in 1 *sam* (Viy 438a) Thān. 393a vividly describes the startling effect of the first occurrence of the *ohi*-cognition on him who comes to behold the earth quite small swarming with tiny beings (*kunthu*), a powerful god, a monstrous serpent living in distant continents or the unclaimed

1 *anantām tayaśa-bhāṣā-prāyogyā-arganā'pantarāla-vartini dravyāni; sarvāni = bādara-sūkṣmāni rūpi-dravyāni*, Nandīvrtti 97b)

3 Here, again, it is made clear that ∞ is not more than a very large numerical quantity For other details see Śrutasāgara on T 1 10 22, comp BHANDARKAR, *Rep.* 1883-84, Notes p II

treasures hidden in all possible places. For this, however, so Sthān. says, the blame has to be put on the *mohanīya karman* which is still effective within him who possesses the gift of *ohi*-cognition.

§79. These magic qualities are equally inherent in those who own the negative *ohi*-cognition (Viy 435a). For the three first kinds of cognition also appear in their negations (T. 1, 32) called the three-fold *annāna mai-annāna*, *suya-a* and *vibhanga-nāna* (Viy. 343a). All three of them rest on *micchā-ditthi*, the wrong belief (§168), a word, by the way, not applied by Umāsvāti in the Sūtra (T. 1, 32 f). As to *mai-* and *suya-annāna* (both of which do not occur separately) Nandī gives it in 143a. The erroneous cognition in the field of imagination has the same four stages as has the *ābhiniḥohiya*, which if caused by evidence is based (Nandī 194a, Viy. 343 a) on the non-Jainist philosophy, science and arts ¹ The *vibhanga-nāna*, finally, (or *vibhange nāmaṃ annāne*, e.g. Viy 433 a, b) shows up where the teaching of Mahāvīra was not conveyed orally and where, moreover, the Karman condition does not correspond with the above mentioned presuppositions (Viy. 430a). But it is the reward for spiritual preparedness and abstinence in the sense of the teaching, and on account of *sammatta* and its consequences it may even change into *ohi*-cognition (Viy. 433a). Thus Mahāvīra corrects the wrong conceptions of the world view resting on *vibhanga* which the former King Śiva had acquired through his chastisements as *disā-pokkhiya vāṇapattha tāvasa* (Viy. 514b), as well as the wrong ideas about gods maintained by the Brahman Poggala (Viy. 551a). And the seven cases of *vibhanga-nāna*, listed by Thān 382b, also refer to questions concerning the teaching. It is not only the wrong view but also the rejection of the true facts which they all have in common, whereas the wrong *ohi*-cognition is being described by Viy. 343a as referring (*samthiya*) to the most different things beyond the field of belief e.g. localities, geographical dates, places of worship,² animals and genii.³

1 Comp WEBER, Ind Stud 17, 9 f

2 *rukṣha* and *thūbha*

3 *kinnara* etc, for the Bhavaṇavāsi-gods are known to pertain to the terrestrial sphere.

In this connexion we may omit the calculations following in *Viy* in how many different ways and in relation with what kinds of other qualities beings are in possession of either true or wrong cognition (*nānī* and *annānī*, 343a ff). In discussing the range of effect (*visaya*) of both kinds *Viy* 356a makes us understand that by force of imagination cognition goes back to teaching and by force of evidence to functioning (*āsesaṃ jānai pāsai resp. uvautte j p*). Provided that *āesa*, in this case, has not a different meaning, there can be no doubt acc to § 71 that the two words were changed by mistake imagination follows from *upayoga*, evidence from *ādeśa*

§80 Beyond the sphere of the *ohi-nāna* there is no longer any wrong cognition, i e. resting on a non-spiritual basis, but only different grades of infallible orthodox cognition. The *manapajjava-nāna* following next (Nandī 99b) is the most colourless among all five, while *ohi* and *vi bhanga* were the most stimulating for imagination as far as the latter can be spoken of. It occurs only with human beings who in their spiritual career stand on a high level (*saṃjaya appamatta iddhi-patta*).¹ It is inferior to the *ohi-nāna* in that it is restricted to ∞ Aggregates with ∞ space units, to the human sphere (*manussa-khetta*, §122), to the minute part of a *paliovama* and to the ∞ small fraction of all existing accidents (*savva-bhava*). But it reaches the thoughts (*manogaya bhāva*) of the beings with five senses as expressed by the name of *manahparyāya* "changing condition of the inward sense".² The sub-sections of the two kinds of cognition are named by Umāsvāti T 1, 25-29, so for instance imperishability (*apratipāta*), not specially mentioned by Nandī. But together with the latter he speaks (T 1, 24) of two grades of the *manapajjava-nāna*, the one being achieved by a more simple and the other by a more comprehensive way of visionary thinking (*uyyumaī* and *viula-maī*, Thān 49b), the latter being more extensive, purer and brighter. For an example the Nandīcunni speaks of a *ghata* somebody thinks of, and of the different qualities of the same (Nandīvr̥tti 108b)

1. Sthān counts the *avadhi*- up to the *kevala-jnāna* among the possessions of an *iddhimanā*

2. The Dig in T 1, 24, 29 speak of *m-paryaya*.

§81. The conditions under which the *kevala-nāna* (Nandī 111 b ff) comes about belong to the description of the road leading to salvation (§ 186). Here we are concerned with explaining its meaning which is simple enough, as to substantiality, space, time and condition it discloses the cognition of all that is, was and will be, and acc. to Umāsvāti T 1, 30 it does so with regard to all substances and their conditions. That is why the Kevalin can be called *ega-nānī* (Viy 343a). For his knowledge includes all the other stages of cognition. We are given many proofs for this knowledge of his (e.g. Viy 216a, 217b, 238b, 567a). Readily and frequently the Kevalin is contrasted with one who stands on a lower stage, i.e. with the *chaumattha*, *āhohiya* and *para-m-āhohiya*. *Chauma* means the same as *āvarana*, the “veiling” of the soul, and even the common monk is still subject to it (*chadmastha*, *sakasāya*, *niratisāya*, *avadhy-ādi-atīśaya-vikala*, *akevalin* Sthān., Vy). The *chaumattha* is known by his acting contrary to the five principal rules, by allowing homage to be paid to him and by his not acting according to his words (Thān. 389a). It is but indirectly, not directly like the Kevalin, that a monk becomes aware of his imminent salvation (Viy 221b), and he also lacks all the Kevalin’s high standpoint on which by suffering he gets rid of his Karman in order to give an example to others (Thān 304 b). He lacks the *ohi* cognition since apart from not perceiving the immaterial basic facts, he neither perceives the free atoms and aggregates of sound, smell and wind (Viy 342a=Thān 505b, s. id. 341a, 354a, 427a). But we read Viy 755a that some *chaum.* are capable of perceiving atoms *ohi*, however, is also the base for the conception of *āhohiya* (Thān 61a *ahohi*) and *para-m-āhohiya* monks. The former is said to be (e.g. Vy. 67a, Rājapr. 130b) one whose *ohi* is not yet of the highest grade (*paramāvadher adhastād yo ’vadhuh*, *adho’vadhikah parimuta-ksetra-visayāvadhi-kah*). That this does not imply the case of one whose cognition is still below the *ohi* level seems to be shown by Rājap 129b where the *āhohiya* Kesi is in possession of the *ohi*. The corresponding passages of the text (e.g. also Viy. 65b, 311a, 755b) the *āh.* passes for *chaumattha*.

The *para-m-āhohiya* equals the Kevalin in that he is certain to enjoy salvation even in the same existence (Viy. 311a), and acc. to Viy 755b his way of realising the objects, as will be discussed below (§ 82), is just the same as well. From our way of spelling the word it already follows how, in our view, it has to be analysed it concerns an *adhovadhika-para=adhovadhikāt parah* or *paramah*, as we read in Viy. 67a The reading to *para-m-ohiya* in the same passage expresses the same. Probably *āhohiya* itself goes back to *yathāvadhika*.

The Kevalin, as long as he still dwells on earth, is distinguished as *bhavattha-kevalī* from him who, as *siddha-k-*, has entered Siddhi The former¹ is either still active or has ceased to be so. he is either *sajogī* or *ajogī* (§ 186). Just as these two are subdivided in temporal respect according as they are either in the first (or last) *samaya* of their condition or not: (a)*padhama-* or (a)*carama-samaya-* (s)*ajogī*, so the *siddha-kevalī* are subdivided temporally into such enjoying Siddhi in the first and others doing so in the further *samaya* of their existence: *anantara-s-k-* and *parampara-s-k-*. This structure fully corresponds with that of the *kevala* cognition rendered by Tḥān. 49b; Nandī 111b, and so it repeats also 15 different kinds of the *anantara-siddha-kevalī* expressing the origin of omniscience. One owns it by obtaining it from the sacred teaching (*titttha*) or while this teaching is either latent or decays (*atitttha*), as a *tittthagara* or as monk in general (*a-t*), by one's own strength (*sayambuddha*) either in order to pass it on or to keep it (*patteya-buddha*) or thanks to another Kevalin (*buddha*), and, moreover, the owner has the physical characteristics of one of the three sexes (*linga*, though not their sexual feeling), the external marks of either Jain or alien monkhdom or those of laity (*salinga* etc), and, finally, he has acquired them either in company with other true believers (*anega*) or by himself.

§82. By concluding this subject we return to its beginning where the spiritual function (*uvaoga*) was designated as the essence and characteristic feature of the soul The statement

1 For its 34 qualities and marks of distinction (*buddhāśesa*) see Samav 60b; partly others with the Dig Śubhacandra on Chapp 1, 35, 4, 42

of this fact in T 2, 8 is followed in T. 2, 9 by the division of the *upayoga* into “formally distinct” and “formally indistinct” imagination. This Sūtra goes back to Pannav 29. Imagination is *sāgāra* if the object is grasped separately together with its present qualities (*saparyaya*, Prajn.). This happens in cognition, no matter whether it is of the right or the wrong kind, the latter in this case being called non-cognition. Thus it follows that the *sāgāra-uvaoga* is eight-fold and that it comes wherever those two kinds of cognition are recorded, i.e. with all beings. The *anāgāra-uvaoga*, however, is given when an object appears without its temporal attributes as an abstract (*sāmānya-rūpatayā*). Prajn. 526 a, b illustrates this by saying that a Kevalin needs for both but 1 *saṃ.*, whereas any other individual needs for it upto 1 *muḥ.*, but to become aware of the qualities of the object will take him x times as much as to grasp it as an abstract. The latter is called *daṃsaṇa* meaning “seeing” in a metaphorical sense, and it is four-fold according¹ as it is done either by means of the visual organ, by one or different other organs of sense or else by the inward sense (*acakkhu-d*), or either whether it comes to happen metaphysically with and without limitation (*ohu-* and *kevala-d*). All beings own at least one of these kinds of the *daṃsaṇa*. In case, however, a *chaumattha*, by force of *jñāna* and *avadhi-darśana*, should grasp (*jñānā pāsai*)¹ an object (of ∞ space units), a *sākāra-* and an *anākāra-upayoga* will happen simultaneously. But with the Kevalin it is different in this case any simultaneity, i.e. any coincidence of the *kevala-jñāna* with the *sākāra-* and the *kevala-darśana* with the *anākāra-up.* is out of the question, and it is this consideration that Vīy 755b and Pannav 531 a f. are based upon. Prajn. categorically contradicts (532b) Siddhasena who had maintained that a Kevalin grasps an object specially and generally at the same time (*kevalī bhagavaṃ yugapat jñāti paśyati ca*)

The discussion of *uvaoga* in Pannav 29 is followed by that

¹ Thus the process with a Kevalin is rendered (Vīy 221b, 223 b, 888a) whereas Āyār 7, 24 does not mean such a one

of the *pāsanāyā* (*paśyattā*=*pieksana*) In Pannav 30 It is equally called *sāgāra* and *anāgāra*, but we are given but six kinds of cognition and but three kinds of "seeing". That is to say that among the first both the right and the wrong way of imagination (*mai-nāna* and *-annāna*) are missing, and among the last the *acakkhu-damśana* For according to Prajn the *sākāra paśyattā* refers to all three times, whereas the two *matī* are only concerned with the present, and, moreover, the *anākārā paśyattā* is qualified by its distinctness (*parisphuta-rūpa*) which is not the case with the *acaksur-darśana*

§83 Following the subject of imagination we may proceed to the next paragraph by considering the will It is represented by the synonyms (Viy. 56b, 149a, 571b, 643, 654a, 657a; 777a; Thān 19b) *utthāna kamma bala vīriya purisakkāra-parakkama*¹ By Mahāvīra's coining *atthi*² *utthāne* i *vā*, up to *p* -*p* i *vā* (Viy. 56b) this sequence has gained a fundamental importance also for the Buddhists (Angutt 3, 195) causing the *kiriya-vāi* to be distinguished from the *akiriya-vāi* and two other so called *samosarana*, i.e. the *s* of the agnostics (*annāniya*) and the *s* of the ritualists (*venaiya*) (Viy 30), as one acknowledging the free will as a moral principle³

Āyār. 1, 13 renders *kiriya-vāi* together with *kammā-vāi*, though in this case the inconsistency between a logical prosecution of the Karman idea on the one hand and the principle of free will on the other—the latter being excluded by the former—becomes specifically evident For the exchange between *kamma* and *kiriya* comp § 99.

§84 *The Karman* By discussing the Karman⁴ we return to the field of matter, since the Karman goes back to the fundamental fact of the *poggala*. In the Karman teaching it

¹ Another sequence says *iddhi, kamma, paoga* (Viy 190b, 796a)

² In earthly life ! Not with the Siddhas (comp Viy 657a)

³ SCHRADER, Philosophie, p 12

⁴ Important monography by v GLASENAPP, Die Lehre vom Karman in der Philosophie der Jainas, nach den Karmagranthas dargestellt Leipzig 1915 See also Virchand R. GANDHI, The Karma Philosophy, Bombay 1913 Second ed 1924

unites with the other fundamental fact of the *jīva*. The wandering of the souls, a world law (*loga-tthi*) among other world laws¹ is exclusively brought about by their being charged with the Karman once and for ever, and this, too, is the primary cause of the world structure (equally called *loga-tthi*) (. . . *ajīvā jīva-paṭṭhiyā, jīvā kamma-p ; ajīvā j -samgahiyā, j k -s* Viy 81a; Thān. 132 b, 213 b, 358 a, 422 b)

By their merging with matter (*poggala*) the beings are subjected to the Karman (*poggal'āltāra poggala-parināma p.-joniya p.-tthiya kammōvaga kamma-niyāna k tthiya kammunā-m-eva upphariyāsam entī*, Viy 644 a) If they were not charged with the Karman the souls would lead that existence in the highest possible regions attributed to the Kevalin after his parting from the world (§ 187). This can partly be derived from the names of the Karman, by saying that, among others, it is veiling both knowledge and vision, it follows that when being absent both knowledge and vision are unveiled

The soul comes to obtain the Karman by means of the binding (*bandha*). T. 8, 2 is clearest in expressing this process: *sakasāyatvā jīvaḥ karmāno योग्यं pudgalān ādatte* Hence matter attracted by soul is not yet Karman, but it comes to be so, that is to say by its very penetrating it, while all other matter pertains to the soul but externally. This penetration is of different intensity (i.e. depth); Viy. 34a is careful in distinguishing *siddhila-bandhana-baddha kamma* from *dhaniya-b.+b. k*, and the comparisons given by Viy 250b help to explain it. A dirty dress is more difficult to clean than a stained one, from an anvil not even the smallest part will come off in splinters, but dry grass is sure to burn up immediately and a drop of water falling on red hot iron will evaporate instantly. Attraction comes about by the soul activating the inward sense and speech activating the body. This is the *joga* (*joga*, T 6, 1)² By considering that the two first are at work in the four cases of "wrong", "true",

1 They consist briefly spoken, in the unalterability of the facts, though only a few like *jīva* and *ajīva*, *loga* and *aloga*, *tasa* and *thāvara* are mentioned (Thān 470)

2. Related to it is *pañhāna*, the doing (Viy 750a, Thān 121a 196a)

etc. (§ 74), that four bodies (the fiery one is missing) form four additional cases and that three mixed kinds (*mīsa*) supervene to the latter, we arrive at 15 different kinds of *yoga* (Viy 854b). Acc. to Viy. 251b the three fundamental kinds together with the Karman are called the “working forces” (*karana*) The obvious question as to the metaphysical way of activity has been dealt with by Devanandin who (on T. 6, 1) denotes the *yoga* as a vibrating (*parispanda*) of the soul units As to the *yoga* (*joga*) it causes substances which may become Karman to flow into the soul (T 6, 2), a process implied by the word *anhaya*¹ (JACOBI “influence”), and accordingly it follows that speech and inward sense (a.o.) are called *anhaya-kārī* and *a.-kāra* (Āyār II 92, 7; 132, 10)² That, however, these substances continue to stick to the soul is due to the work of passions By the ambiguous word *kasāya* they are, at the same time, attributed a binding power metaphorically³ Anger, pride, fraud and greed are denoted as passions (§ 167), and they, for their part, result from Karman (*udaya*, §86) Thus the circle closes Where passion is absent there the substances fail to have any possibility of sticking The freedom from passion, however, and hence the purification of the soul leading to *moksa* can be realized in life only by the Jain monk (or nun) That is why the *bandha* is twofold (Viy. 383b). it is monastic (*iriyāvahīya*) or profane (*saṃparāīya*) We start by dealing with the former even though its basic conceptions can be discussed only in connexion with the latter By *iriyāvaha*, *-vahīyā*, and also *iriyā-* Kappa 6,13=Thān 371a understands the careful walking of a monk, but in a wider sense they also mean his conduct according to the rules The Karman bound up in such a one is of no duration worth mentioning (§ 85), JACOBI on T 6, 5 distinguishes it as “momentary Karman” from the “durative Karman” Activity acc. to the rules, so Sūy II, 2, 23

1 *anhaya* “to flow in” = *āsnava* derived from *anu* Next to it stands *āsava* In Sanskrit we find *āsrava* and (wrong) *āsrava* Comp HULTZSCH ZDMG 72, 149 *anhāi* Uvav § 64ff, however, does not belong to *āsrava* (v GLASENAPP, Karman p 11), but is = *aśnāi*

2 *Panhav* 1-5 are the *Anhaya-dārāṃ*

3. Expressed by Devanandin on T 6 5 —Also *rajas* is passion, *raya* = *kamma* Thān 319b

(316a) says, "is bound in 1 *samaya*, felt in the next and extinguished in the next but one" (comp. also Vīy 183a). The performer of this spiritual Karman is characterised as *saṃvudda anagāra*, i.e. a homeless man performing a defensive action (*saṃvara*, § 169). But Vīy. 309 b adds that he, in doing so, must have released himself of all four passions, i.e. of anger, pride, fraud and greed. Strangely enough this is not mentioned in Vīy. 383 b where the *iriyāvahīya-bandha* is reserved but to him who is free from any sexual consciousness (*avagaya-veya*).

Vīy. 52a thought it necessary to point out that the Karman operates with the total I on the total object (*savvenam savve kaḍe*) but not by and on a part of both (*desenam dese, d savve, savvenam dese*), and that it does so in the past, the present and the future. In this case the process of binding (*kammaṃ kareṇ*) is followed by the accumulation of the Karman (*cinaṇ and uvacinaṇ*,¹ Vīy. 53a), and the ensuing process (§ 86) is furthermore denoted by *udīreṇ, veṇ and niḥjareṇ*. We find the same as early as in Vīy 23a, though here the author starts from the transformation of particles of substance taken in (*āhāriya poggala*) which, consequently, must be understood as comprising Karman atoms. Comp also Pannav. 457b (§86) The accomplished fact of binding underlies Vīy 26 This passage thoroughly deals not only with the *bandhī* having already bound the Karman, but also with the possibility or either impossibility (depending on the quality of the soul) of binding further Karmans in either the present or future life of the respective person. If in this *Saya* as well as in the following and frequently elsewhere the author comes to speak of the *pāva kamma*, he, by this expression, refers both to good and evil doing, whereas its limitation to guilty doing is merely fictitious and caused by the idea that guilty doing forces itself on the natural mind more readily than a meritorious one The inflow of both merit and guilt is noted by T 7, 3 as the two consequences of the *yoga*.

§85. We cannot proceed in discussing the problem of binding before having dealt with the way how and-into what

1. Or else (*wa*)*cinaṇ*, e.g. Vīy 556a

different kinds of the Karman the particles of substances that have flowed in transform within the soul. This transformation becomes apparent as soon as they materialize. There are eight different kinds, and they are called *kamma-pagaḍī* (Vy 255a etc., Pannav 453a etc., Utt. 33, 2, T 8, 5). They comprise the afore mentioned Karman of veiling both knowledge and vision, the Karman to be perceived through the senses, the confusing Karman, the Karman effecting the amount of life, individuality and social standing, and, finally, the Karman obstructing opportunities. Their sub-species (*ullara-pagaḍī* as against the mentioned *mūla-p*) are demonstrated in Pannav. 23, 1 (§ 87). In dealing with the binding first, we are thoroughly informed by the same in 23, 2 (484b) about the minimum and maximum duration of the different kinds of Karman bound by the individual classes of the beings. So, for instance, with all beings of one sense the Karman veiling knowledge will last for $3\frac{1}{7}$ *sāgarovama* plus $1\frac{1}{6}$ *pallovama*, while with a reasonable being of five senses it will lie between the fraction of 1 *muhutta* and 30 *kodākodī* of *sāgarovama*. Further we are shown (488 b) what soul (*ke* scil *jīva*) a kind of Karman in its shortest duration has and what sort of being will bind the longest lasting Karman in the eight different kinds (490a). But we cannot go into details here. The duration is called *bandha-tthū* and *kamma-tthū* in Vy 255a, whereas Pannav 475ff gives but *tthū*, and it consists of the preliminary time of rest following the binding (*ābāhā*) and the time of effectiveness (*kamma-niseḡa*) which starts with the *udaya* and lasts until the last particle of this Karman is extinguished. The *ābāhā* which amounts to one hundred years for each 1 *kodāk* of *sāg.* is included in the *tthū*, though, acc to Vy 255b, by some it is added to it¹. For *ābāhā* the later literature puts *sattā*, "being existent in potentia" (v GLASE-NAPP, Karman p 43). In the Canon we only find the kindred *santa-kamma* (§ 183). With reference to the mentioned passages and to Vy 53b, Samav 147b *niseḡa* "ray" is ex-

1 Owing to an erratum in Vy what follows on 255 b stands on 257b and what follows on 258 b on 256 a

plained as a Karman particle decreasing in the reaction produced from *samaya* to *samaya*. Thus the duration of the Karman equally suggests the question of its intensity, though but by an indication. Most certainly, however, when speaking of *anubhāga-kamma*, the author means intensity. There is only such a one and a *paesa-kamma* (Viy 65a; Ṭhān. 66a), and Mahāvīra claims the discrimination of this duad to be his own (*mae pannatte*). To this *anubhāga* Pannav. 23, 1 (457b ff.) corresponds by giving *anubhāva*, Umāsvāti merely has *anubhāva* (T. 8, 4 22). Apart from the kind, the duration and the power of the binding Umāsvāti, finally, also knows of the quantity (T. 8, 4. 25.). It is characterized by the *pradeśa*. To this there belongs the just mentioned *paesa-kamma*, though nothing in detail is being said as to its nature. We but learn from that passage that it must be perceived through the senses (§ 86) while with the *anubhāga-k.* this is not necessarily a must. Acc. to Viy. 421 b *paesa* is synonymous with the *avibhāga-paliccheya*. Each soul unit (*jīva-paesa*) is on all sides surrounded, if at all (for it does not pertain to the Kevalin), by Karman units (*āvedhiya-parivedhiya*). For this comp T. 8, 25.

In the Canon (Ṭhān. 220 b), different from Umāsvāti, those four points of view appear among the *bandha*, and, moreover, they are being considered with regard to their relative number by asking of what sort of binding, what duration, what intensity and what quantity the relatively least etc. cases will occur. But then the cases mentioned are dealt with in reference to *saṃkama*, *ni(d)hatta* and *nikāya*. *saṃkama* presents itself when a Karman sub-species different from the one formerly bound materializes. *nidhatta* and *nikāya* signify different grades of intensity by which Karman particles unite (comp. also Vy 25b). These explanations as well as those of the following expressions have to be drawn from the commentaries only. For there are still others like *oyattei* and *uvvattei* which occur side by side with *saṃkama*, *nihattei* and *nikāei* (Viy. 24 b, 26 a). They express that the effect and, consequently the consumption of a Karman may become either larger or smaller than is presupposed by its binding. The later authors

speak of *oyattanā* and *uvvaṭṭanā*, the latter appearing in the Canon in a different meaning (§ 92). Under what conditions the mentioned processes occur is not said there.

§86. By referring to these expression we have already proceeded from the binding of the Karman to the way how it works. It starts at the end of the time of rest. A solemnly styled formula (Pannav. 457 b ff.)¹ calls the Karman *jīvena baddha puttha baddha-phāsa-puttha saṃciya ciya uvociya āvāga-patta vivāga-p phala-p udaya-p*. The last four expressions contain in *udaya* the common word for the coming-into-life of the Karman. If this comes to pass, the soul is in the state of *udaya* (§ 182). We must distinguish *udaya* from *udīranā*, but in verbal construction we never find *udīya*, but only *udinna* or *sayam udinna*; its opposite is then formed by *parena udīya* (Viy. 57 b; Pannav. 457 b). While *udaya* signifies the so to speak natural beginning of the operative act, the *udīranā* or the "initiative" means the premature materialization. Resting Karman is attracted by activity thus awakening it to become effective (*karanen' ākaddhiya udae dijjai*, Śivaśarman, Kammaṭṭapayadī, Vy 24. a). It is only the commentaries that speak of the *udīranā* going back to activity, the *yoga*, though they neglect the fact that thus, at the same time, a new Karman is being produced. By *udaya* and *udīranā* there begins for the individual the palpability of the Karman (*veyanā*). For the different sensations Pannav. 35 gives certain principles of classification parts of which are obvious as, for instance, bodily and spiritual, pleasant and unpleasant *veyaṇā*, and such ensuing from the mixtures of these opposites. In addition we may begin with pointing out the discrimination made between the sensations signified by the words *nīdāya* and *anīdāya*. Though in their varying derivation of these words the commentators betray their uncertainty, it can be said that the first group means "conscious" sensations pertaining only to beings owning reason,² whereas

¹ For another one see Pannav 402 a

² It seems to be a gerund. Viy 40 a has *anīdāe veyanāṃ vanti*, Viy 769 b=Pannav 557 a probably has (a)*nīdāyaṃ v v* for (a)*nīdāya v v*, and in the preceding enumeration *nīdāya anīdāya* for *nīdāya ya anīdāya ya*

it may be assumed that “unconscious” sensations are merely reflexions. Furthermore we may mention that sensation that a monk imposes upon himself and that coming from without (*ajjhovagamiya*—wrongly : *abbhov*—and *avakkamiyā*) (Viy 65 a; Thān 88 b; Pannav. 556 b). Palpability is interconnected both with action and extinction. Towards dissenters Viy. 224 b makes it quite plain that palpability does not always correspond with the produced Karman (*kada kamma*) (*pānā* etc. *anevaṃbhūyaṃ veyanaṃ veenti*) To prove this Viy. 767 b tells us that while with all beings of hell inflow (*āsava*), action (*kiṛiyā*), and feeling (*veyanā*) are strong in comparison with annihilation (*niyyarā*), it is different with the gods where along with extinction also feeling is weak as against the two first. It is simultaneously shown here that palpability and extinction do not correspond everywhere, though this only refers to beings beyond the human range, whereas within this range strong sensation will represent strong extinction and vice versa (Viy. 250a). In any case, however, to feel Karman (*veeī, paḍisaṃveeī*) means to consume Karman (*niyyareī*), even though the *samaya* of both do not coincide (Viy. 301 a; Sūy 22, 23). With some kinds of Karman this consumption¹ is accompanied by a special process called *samugghāya* (§ 89). Rhetorically speaking extinct Karman can be signified as good luck (*suha*) as is done in Viy 314 a. The extinction is irrevocable. In addition to *veyanā* it is called *niyyarā* (elsewhere even *khaya*), and the state of the soul prevailing with *khaya* goes by the name of *khariya*.

§87. Proceeding from these general considerations we now arrive at the different kinds of the Karman. While in the Canon handed down to us the common processes of *bandha* etc., receive next to no definition, most probably owing to the fact that they are supposed to be obvious, we have first-hand information as to its different forms of manifestation (Pannav. 457 b ff, 465 b ff, Comp. also T. 8, 7 ff). The Karman

The comm by deriving from *dā*, to give” and *dā* “to purge” take *nidā* either for a subst (*nidā jñanam* and *amidāe* = *an.rdhāranayā*) or for an adj (*cittavālī*, *samyag-vivekavālī*)

¹ So far as it is not brought about by ascetic methods it is called *akāma-nyjarā* (Uvav § 56, p 61).

speak of *oyattanā* and *uvvattanā*, the latter appearing in the Canon in a different meaning (§ 92). Under what conditions the mentioned processes occur is not said there.

§86 By referring to these expression we have already proceeded from the binding of the Karman to the way how it works. It starts at the end of the time of rest. A solemnly styled formula (Pannav 457 b ff)¹ calls the Karman *jīvena baddha puttha baddha-phāsa-puttha saṃciya ciya uvaciya āvāga-ḥatta vīvāga-ḥ phala-ḥ udaya-ḥ*. The last four expressions contain in *udaya* the common word for the coming-into-life of the Karman. If this comes to pass, the soul is in the state of *udāya* (§ 182). We must distinguish *udaya* from *udīranā*, but in verbal construction we never find *udīya*, but only *udinna* or *sayam udinna*; its opposite is then formed by *parena udīriya* (Vy. 57 b; Pannav. 457 b). While *udaya* signifies the so to speak natural beginning of the operative act, the *udīranā* or the "initiative" means the premature materialization. Resting Karman is attracted by activity thus awakening it to become effective (*karanen' ākadḍhiya udae dijjai*, Śivaśarman, Kammāpayadī, Vy 24. a). It is only the commentaries that speak of the *udīranā* going back to activity, the *yoga*, though they neglect the fact that thus, at the same time, a new Karman is being produced. By *udaya* and *udīranā* there begins for the individual the palpability of the Karman (*veyanā*). For the different sensations Pannav 35 gives certain principles of classification parts of which are obvious as, for instance, bodily and spiritual, pleasant and unpleasant *veyaṇā*, and such ensuing from the mixtures of these opposites. In addition we may begin with pointing out the discrimination made between the sensations signified by the words *nīdāya* and *anīdāya*. Though in their varying derivation of these words the commentators betray their uncertainty, it can be said that the first group means "conscious" sensations pertaining only to beings owning reason,² whereas

¹ For another one see Pannav 402 a

² It seems to be a gerund. Vy 40 a has *anīdāe veyanaṃ veenti*, Vy 769 b = Pannav 557 a probably has (a) *nīdāyaṃ v v* for (a) *nīdāya v v*, and in the preceding enumeration *nīdāya anīdāya* for *nīdāya ya anīdāya ya*

it may be assumed that "unconscious" sensations are merely reflexions. Furthermore we may mention that sensation that a monk imposes upon himself and that coming from without (*ajjhovagamīya*—wrongly *abbhov*—and *avakkamīyā*) (Vīy 65 a; Thān 88 b; Pannav 556 b). Palpability is interconnected both with action and extinction. Towards dissenters Vīy. 224 b makes it quite plain that palpability does not always correspond with the produced Karman (*kada kamma*) (*pānā* etc. *anevaṃbhūyaṃ veyanaṃ veentī*). To prove this Vīy 767 b tells us that while with all beings of hell inflow (*āsava*), action (*kiriyā*), and feeling (*veyanā*) are strong in comparison with annihilation (*niyyarā*), it is different with the gods where along with extinction also feeling is weak as against the two first. It is simultaneously shown here that palpability and extinction do not correspond everywhere, though this only refers to beings beyond the human range, whereas within this range strong sensation will represent strong extinction and vice versa (Vīy. 250a). In any case, however, to feel Karman (*veeī, paḍisaṃveeī*) means to consume Karman (*niyyareī*), even though the *samaya* of both do not coincide (Vīy 301 a; Sūy. 22, 23). With some kinds of Karman this consumption¹ is accompanied by a special process called *samugghāya* (§ 89). Rhetorically speaking extinct Karman can be signified as good luck (*suha*) as is done in Vīy. 314 a. The extinction is irrevocable. In addition to *veyanā* it is called *niyyarā* (elsewhere even *khaya*), and the state of the soul prevailing with *khaya* goes by the name of *khaya*.

§87. Proceeding from these general considerations we now arrive at the different kinds of the Karman. While in the Canon handed down to us the common processes of *bandha* etc., receive next to no definition, most probably owing to the fact that they are supposed to be obvious, we have first-hand information as to its different forms of manifestation (Pannav. 457 b ff, 465 b ff, Comp. also T 8, 7 ff). The Karman

The comm. by deriving from *dā*, to give" and *dā* "to purge" take *nidā* either for a subst. (*nidā jñanam* and *anidāe* = *anirdhāraṇayā*) or for an adj. (*cittavati*, *samyag-vivekavati*).

1 So far as it is not brought about by ascetic methods it is called *akāma-niyyarā* (Uvav. § 56, p. 61).

obscuring knowledge (*nān'āvaranijja kamma*) obstructs (acc. to Thān 347 a) cognition in all its five forms. It causes—this is its *anubhava* § 85)—the obscuration of the senses as sources of cognition and of all knowledge gained by them (*soy'āvarana soya-vinnān'āvarana netti'āvarana netta-v.-āv.*, etc.) Insights gained by other than sensual means and their obscurations are not considered. The result is that one does not know what one is to know, wants to know, or else has known. The Karman obscuring vision (*daṃsan'āvaranijja* or *darisan'āv k.*) arrives at the corresponding result for vision. It shows up in nine different kinds (Thān. 447 a, Samav 15 a), for it obstructs the four-fold vision (§ 82) and furthermore it consists in unconsciousness which, owing to the chosen expressions, gradually deepens by proceeding from normal sleep (*niddā*) to sleeping while walking or standing (*payalā*)¹—including the intensive stages of both (*niddā-niddā, p-p*)—and onwards to acting while sleeping (*thīn'addhi*)². The Karman which is called the one to be perceived through the senses (*veyanijja k*) represents the feelings of comfort and discomfort (*sāyā- and asāyā-v*). Both are shared by the five senses, the inward sense, speech and body, and, hence, each of them is eight-fold. Next there follows in (52 names, stated by Samav 71 a, the confusing Karman (*mohanijja k*) producing disturbances in belief and conduct (*daṃsana-m* and *caritta-m*), the former manifesting itself supposedly as true belief (*sammatta-veyanijja*), erroneous belief (*micchatta-v*) and as the mixture of both (*sammā-micch v*). The *sammatta-vey* in this connexion is said to be a modification of the *micchatta* (*mithyātvā-prakṛti* Prajn. 468 a) (comp also JACOBI on T 8, 10). Perhaps the intention was but to incorporate into the system the fact of orthodoxy being a Karman just as well, and its becoming conscious (hence *veyanijja*). The disturbance of conduct is caused by passion

1 This goes with *payalāṇi*, Viy 217 b

2 JACOBI's "greed in the state of numbness" is based on the *styāna-grddhi* of Umāsvāti, etc., for *styāna-rddhi* (T 8, 8) Sthān 447 b has both forms.

(*kasāya-v*) showing up in the four forms of anger, pride, fraud and greed (Thān 193 a, Samav. 9 a). Each of these passions appear in four grades and each is called accordingly *anantānu-bandhi*, *apaccakkhāna*, *paccakkhān'āvaraṇa* and *saṃjalāya*. With the single exception of the last these words are adjectives. Their meaning is the linkage with the Samsāra (*ananta*), the entire absence and the occasional obscuring of renunciation (*paccakkhāna*, § 172), and the sudden eruption, the latter being the weakest form. It thus follows that the form of passion concerning the disturbance of conduct is sixteen-fold (Samav. 31 a) Several moods as laughing, pleasure, fear, grief and loathing¹ do not count among passions and are called *nokasāya* for that reason, and sexual consciousness (*veya-veyaniyya*) as man or woman or neuter is equally placed into this connexion. So, then, we have altogether nine forms (Thān 468 b) of disturbance of conduct free from passion, though by disregarding the sub-division their power is five-fold only. For a reason immediately going to be discussed there now follows the kind of Karman invariably ranging last, the obstructing Karman (*antarāiya k*). It manifests itself as obstructive where the act of giving, taking, enjoying (*bhoga*), using (*uvabhoga*)² and volition (*vīriya*) ought to take place. The so far mentioned *kamma-pagadā* with the exception of the *veyaniyya* all share in a more or less strongly pronounced activity, and in that this activity has a destructive influence on the soul they are comprised as *ghāi-kamma* (Anuog 118 b). Together with the *veyaniyya* they are placed over against the three last kinds as inactive or *aghāi-k.*: first the quantity of life (*āyua k*) which differs with the beings of hell, animals, humans, and gods (§ 90), and finally, the individuality (*nāma-k*) and the social standing (*goya-k*). The latter is either high or low and makes itself felt accordingly, in which case the position within society

1 Causes for laughing (*hās'upphatti*) are given by seeing, speaking, hearing and remembering (Thān 203 a). Fear concerns both this world and the world beyond, confiscation, something unexpected (*akamhā-bhaya*), pain, death and disgrace (Thān 389 a, Sam 12 b)

2. This discrimination acc. to Prajñ

is determined by noble birth (caste, *jāi*) and good family (*kula*), but also by physical strength (*bala*), sacredness (*tava*), erudition (*suya*), costly property (*lābha*) and splendour (*issariya*) as well as by their opposites. All this refers to human conditions, but, though neither text nor commentary gives it, it may naturally, under certain circumstances, apply to non-human beings also. The Karman of the personality or the individuality, at the long last, is built up by very different components which amount to a total of 12 in number. They are physical in both a narrower and wider sense as far as, within one class of beings, they contain shape of the body, structure and functions of the body as breathing, reduction (*āyava* and *ujjaya*) and locomotion (*vihāya-gai*), and influence on the senses (feeling, smell, taste, and colour). Added to this there are the organic causes of death (*uvaghāya*) and the destination of the new form of existence (*ānupuvvī*). With individuality there also goes the power of acting upon others: superiority (*par'āghāya*), the presence or absence of the faculty to influence people, honour and disgrace, pleasant and unpleasant impressions. The end is made up of the state of accomplishment achieved by a Tirthagata. In comparison with this variety the general activity of the individual Karman is merely distinguished as either being a favourable or an unfavourable one. Each of both these distinctions lists 14 cases based on concrete qualities of the Karman bearer, his reputation and his deeds.

§88 That much about the eight kinds of the Karman and their forces acting in materialization. The general formula for these forces was found (acc. to Pannav. 458 b ff.) by saying *jaṃ vedei poggalaṃ vā poggale vā p-parināmaṃ vā vīsasā vā poggalānaṃ parināmaṃ tesuṃ vā udaenaṃ.. (kammaṃ vedei)*. Although perhaps owing to corruption, it fails to be quite clear, in no way concrete particles, e.g. of wood or earth are being meant, as Prajn (460 b), wants it thus leading to quite forced results. It rather concerns Karman atoms. We now come to deal with certain notes referring to individual kinds. Viy. 52a, 63 b have the *kankha-mohanijja kamma*, and 1b. 639 b of the

same has the *veyanijja* (omitting *kamma*). At first sight they seem to belong to the correspondingly called *pagadī*, but they rather concern general denominations. This follows from the contexts which are of an entirely non-special kind. In a report on the soul the *veyanijja* appears as *dukkhī* and *adukkhī aha se veyanijje nijjanne bhava* (Viy. 639 b) ¹ It is the *kankha-mohanijja* that with the whole I acts upon the object (§ 84), it makes itself felt in cases of doubt, desire, uncertainty, discordance and defect (*jīva sankiya, kankhiya, vūḍicchiya, bheya-samāvanṇa, kalusa-s*, 52 a), while monks (60a) will experience it as deviations from cognition, belief, conduct and as other irregularities (*nāṇ'antara . . ling'antara*, etc.). It is bound (56 b) by force of carelessness (*pamāya*) and activity (*joga*), no soul charged with it is able to get beyond foolish or semi-foolish volition (*viriyatta*) (62 b). All beings of one to four senses feel this Karman without being conscious of it (69 b). So, then, this concerns entirely general things, and in this context those names may not be taken in a special sense.

§89 By being annihilated several kinds of Karman suffer a special fate by being subjected to the *samugghāya*, i.e. the "ejection" of their particles. Pannav 36 proceeds systematically in advising us about the *s*., whereas Umāsvāti does not mention it in his Sūtras. There are seven cases of *s* (Ṭhān. 409 b; Samav. 12 b), the last of which being reserved to the Kevalin, so that the remaining six are comprised as *chaumatthiya s*. (e.g. Samav. 11 b). This does not mean, however, that it were within the power of monks only to attain it, the fact is, rather, that all beings share in it correspondingly (Pannav. 561 b). For they all have a certain sense of Karman (*veyanā*), have passion (*kasāya*), suffer death (*marana*) and thus are in possession of the accordingly called *samugghāya* (1 to 3), in the third case the *māran'antiya s*. As far as they have a body of transformation, a body of transposition and a fiery body they are given the possibility of also attaining the corresponding *samug-*

1 In a counterpart of this passage which, perhaps, is only oratorical the *poggala* is given a *lukkhi* and *alukkhi* (Viy. 638, b comp. § 60).

ghāya (4 to 6) (comp. Thān. 288 a). As to the process concerning the *kevali-s* we are advised by Uvav § 141 ff; Thān 442 a To put it briefly, the Kevalin projects his soul atoms still infected with Karman from the vertex and the foot-point from the right and the left side, from the chest and the back in the shape of columns each reaching to the end of the world and then retracts them again. During the time of the 8 *samaya* it takes to accomplish this process, the Karman particles—as must be added logically—disengage from the soul. The *samugghāya* of other beings take a longer time, i. e. 2 *samaya* within a *muhutta* (Pannav. 561 b), and the space filled up by them is, in proportion, infinitesimally small, i. e. equal to the body of the resp being, though in the case of the three last of these *samugghāya* columns we have to add up to 2 *joyana* in one direction. The ejected (*nicchūḍha*) *poggala* dissipate in the world, and Uvav. § 133, Vīy 740 b¹ discuss the question as to who is able to perceive them, or, as Pannav. 590 a, 496 a f. does, whether and to what degree the ejecting individual has committed actions against other beings to whom they 'cause an injury (§ 90). The *vevviya samugghāya*—by differentiating its prefix the appertaining verb is always *samohanai*—is equally described (Vīy. 153 b) as the projection of a column which, however, reaches no farther than x *joy*. By means of it particles of substance coarse in proportion (*ahā-bāyara*)² are eliminated (*parisāḍei*) and others subtle in proportion (*ahā-suhuma*) are attracted (*pariyāei*). This happens twice³

With the *veyanā-samugghāya* the *asāyā-veyanījja kamma* which comes to be felt as pain is being annihilated, with the *kasāya-s.* the *caritta-mohanījja k* so far as it manifests itself as a passion, while with death the remainder of the *āyaya k* ceases to be. In the case of transformation, transposition and ejection of

1 Here the resp monk is not called *kevali* but *bhāvīy'appa anagāra*, as frequently applied elsewhere, and the name of the disengaged particles is *carima sarīra-poggala*

2 They cannot be materially coarse since the worlds of gods and their inhabitants are immaterial. This is discussed by Vīy 154 b

3 "doccaṃ pi" iti *cakirīṣita-rūpa-nirmānārtham* Vīy. 155 a

energy (*veuvvīya-*, *āhāraga-* and *teyaga-s*) which have nothing to do with the Karman directly, the parts of *nāma-kamma* becoming effective in the resp. bodies (§ 62) drop out. The whole conception doubtlessly¹ comes from the impression which pain, anger, curse and blessings cause within the onlooker. Pleasant sensations, though they belong to the *veyanā* just as well, have no *samugghāya*.

§90. *Āyua* does not mean lifetime, though long (*dīha*) and short (*appa*) *āyua* both depending on moral conduct (Viy. 225 b) are spoken of. It rather refers to some material quantity of life (Viy. 215 b) which materializes as Karman during consumption. In correspondence herewith, except with humans and animals, life painlessly comes to an end by itself. With these humans and animals there may happen a greater consumption, and thus the amount of life may run out more quickly than it ought to do normally T. 2, 52 calls it *apavartana* by which we have to understand the above mentioned *gyaṭṭana*. It is brought about by the *uvakkama* (Viy 795 b, specialized Thān 220 b), i.e. the premature materialization which may be rendered as “cause of death” (JACOBI on T. 2, 52). Its originator is either the being itself or somebody else. Gods and beings of hell are *niruvakkam’āyua*, as has been pointed out before. It need not be explained that the class and the stage of the being is, so to speak, imprinted (*nīhatta*, *nīsikta*) on the soul by the *āyua-bandha* and that by causing in it the duration, the dimension, the energy and the occupation of space of the bound Karman it is six-fold for that reason (*jāi-* etc *-nāma-nīhitt’-āyua*),² (Viy 279 b—Pannav 217 a—Thān 376 b—Samav. 147 b) nor need it be pointed out that the palpability of the life Karman is strong and uniform from the completed reincarnation onward (Viy 304 a). Apparently it was necessary to stress that an *āyua* of the future has to be distinguished from such as is consumed in the present. The former is operated in this world (*iha-gaya*), and it is wrong to assume that it should

1 *vedanā-samudghāto vedanā’tīsayāt*, Prajn 519 b

2 Viy 280 a confuses *nāma* with *goya* and *nīhitta* with *nutta* which probably goes back to some misunderstanding

show up in the moment or even after the completion of the reincarnation (Viy. 304 a), it remains untouched before the effective power becomes active (*se purao kade ciṭṭhai*, Viy. 747a). If dissenters hold the view that the soul effects (Viy 98 a) and feels (Viy 214 a) the quantity of life of both this world (*īha-bhaviy'āyua*) and the world beyond (*para-bh ā*), we are bound to say that the opposite is true in that only the one of both is effected and felt.

The *āyua kamma* takes an exceptional position not only in so far as its effect forms the base for the new existence (comp. Viy 280 b = Prajn. 218 a = Sthān 377 a = Samav. 148 a) in which now the other *kamma* materializes, but also in that (Pannav 216 b, Thān. 376 b, Viy. 632 b) its binding is confined to a certain part of life, i.e. to its last. This may be either six months or $\frac{1}{3}$, $\frac{1}{6}$, $\frac{1}{12}$ of the entire *āyua*. The criterion is either the absence or the presence of the cause of death. Hence a person will always effect but the *āyua* of the immediately following life and, consequently, his *ābāha* (§ 85) will be only a very short one. We then read (Pannav. 217 a; Samav 147 b) that every act of binding does not happen continuously but in stages (*āgariseṭṭim*), of which there are eight and whose intensity diminishes acc to the commentators. This reminds of the *kamma-niseṭṭa*. For comparison we are given the example of the cow repeatedly interrupting itself when drinking water (*bhayena punaḥ punar āghotaṭṭi resp. ābrhaṭṭi*).

§91 The *āyua* leads us back to the general consideration following Viy. 422 b dealing with the presence or absence of one or other kind of Karman. The quantity of life, the individuality and the social standing of a person do not show up separately nor are separated from the Karman "to be felt". Where, moreover, there is any "veiling of knowledge", there are equally "veiling of vision" and obstruction. In contrast to these absolute cogencies, the other combinations, except one, are certainly cogent in one direction (*nyamā atthi*), though in their reversion they are but possible (*siya atthi siya n'atthi*), so, for instance, where we

have *mohanijja*, there must be *veyanijja*, but where we have *veyanijja*, there may be *mohanijja*. The one exception mentioned above are *mohanijja* and *antarāyja* which may, though not must, occur together.

Another calculation makes up the contents of Pannav. 24 to 27. 24 is to prove how many Karman kinds possibly can occur with a soul binding one of them. He who, for instance, binds veiling of knowledge (and hence also veiling of vision) is capable of binding either all 8 or but 7 or but 6 kinds. The capability of a soul to bind, however, corresponds but partly with the Karman kinds becoming felt in the same soul. This problem is dealt with by Pannav. 25 where we learn that in a soul binding *veyanijja kamma*, either eight, seven or merely four kinds come to be felt.

Pannav. 26 and 27 state how many kinds a soul binding a certain kind is able to bind, resp. to feel at all. The statements given, however, do not confine themselves to the soul and its multiples (*jīvā*), but they also concern the different classes of the beings. On the other hand the proof is given numerically only: we come to know as possibilities the *atthaviha-bandhaga*, *sattaviha-b*, *chavviha-b*, *cauvviha-b*, *egavviha-b*. and both the *abandhaga* and the *atthaviha*-etc. *vedaga*. But it is not until we read the commentaries that we learn what we have to understand by it. Besides we find it in the later Karman literature, comp. the columns of *bandha* and *udaya* in v. GLASENAPP's representation of the *guna-sthāna*,¹ the canonical fundamentals of which we find in these chapters of Pannav. Their author, most naturally, knew well enough which kinds of Karman dropped out accordingly. If now those Karman specialists state to have taken their subject-matter from the 12th Anga lost to us, then we must conclude that also the Pannav., since it comprises what was at hand, went back to this source.

Finally it is stated (Viy. 257 b) which certain qualities of the soul or of its bearer lead to binding the individual *kamma-pagaḍī*. Physical constitution, as (a o) the quality of being

fully developed (§ 63), speech and subtlety, ranges side by side with intellectual constitution, as (a o) sexual sensation (*veya*), self-discipline, cognition and its formal distinctness (§ 82), and each is multiplied by its negation, its intermediate conditions and its individual cases. To give an example we may refer to the reasonable being (*sannī*) in which case + means *bandhai*, ± *siya bandhai siya no b* (= *bhayanāe b*) and — *na b*

<i>sannī</i>	<i>vey.</i>	+	<i>ātu</i>	±	the remaining ±		
<i>asannī</i>	„	+	„	±	„	„	+
<i>no-sannī-no-</i>							
<i>asannī</i> ¹	„	±	„	—	„	„	—

A similar representation is given in *Vīy.* 33 (951 b) for all one-sensed beings

The informations rendered up to here are of a merely general character and correspond with the theoretical character of the mentioned passages of the texts. With the correlation between *Karman* and action we shall deal in § 167, and we here but mention that (*Vīy.* 574 b=777 b) it is only by force of the *Karman* that the soul and the world gain their variety. One step in the direction of the concrete is seen being done (*Vīy.* 253 a) in that an insignificant and unsympathetic appearance follows from intensive action and activity, whereas a sympathetic one follows from the conscious abstention from doing. This directly leads us up to the fundamental fruit of the deeds, the reincarnation.

§ 92 *The Reincarnation.* For want of materiality the soul as such has no gravity, and it is owing to its being affected with *Karman* only that it stays with in the chain of existence, the *Samsāra*. As soon as it is released from it, it will rush to reach the spacially highest region it is able to gain (§ 187). But “just as the meshes of a net closely following each other by consequently forming in a row without any interval will act up on the next mesh by their gravity, their load, their full weight and their density, thus in every soul in many thousands of reincarnations many thousands of lives by their gravity, their

load, their full weight and their density act on their subsequent lives''¹ (Viy 214 a). But these figures still keep within a modest frame; other texts give only the state of affairs possible with regard to the eternity of the world, its contents and its laws. As a goat pen is filled up with the excrements of the goats, so in every unit (*paramānupoggala-mette vi paese*) of the world an incarnated soul has appeared and expired (*jāe va mae va*), so Viy. 579 a puts it in popular language, by continuing (580 a) that, up from times eternal, as has to be added analogously, a soul has been incarnated more than once or endlessly often in any kind of the beings, and, moreover (581 a), has been related by kinship, sovereignty or servitude with all souls more than once or endlessly often. All beings (*pānā*, etc.) have lived as parts of a lotus (§ 94) or as other plants more than once already or endlessly often (Viy. 511 b, 513 b). Reincarnation is commonly called *uvavāya*² (hence the name of Uvavāya of the 2nd Uvanga), in the title of Pannav 6 *vakkanti*. This word covers *uvavāya* and *uvvatṭanā*, the latter signifying the rising to a specially higher stage. Sinking, however, is called *cayana* (Thān. 66 a).

§93. It may happen that several souls come to incarnate simultaneously on the same stage, be it that of the beings of hell (H), of animals (A)—including elemental beings (A)² and plants—, humans (M) or gods (G). Hence the statements made by Jiv. 140 a as to such souls which, by proceeding on their way of incarnation, leave nought as their remainder (*nilleva*). The statement made by Viy 47a is more theoretical. *asunna-kāla* stand for the time during which a number of souls remain on the same stage without one of them leaving it nor one adding itself to it, *missa-k*, however, is the time during which any number, and *sunna-k* the time during which all of them left it in order to proceed on their way. The four stages are not exchanged indiscriminately, but the change of stages

1 The AUTHOR's Religionsgeschichte Lesebuch 7, 15.

2 The Śvet have *uṣapāta* in a wrong Sanskritization (comp LEUMANN, Aup p 1). The Dig are correct in giving Tattv 2, 32. 35 47 52 *uṣapāda*

(*pavesana*,-*naga* Viy 439 b) follows distinct rules Pannav. 6 (209 a ff), Viy 24 (805 a ff); Thān 58 b teach (what we may be allowed to express by signs of abbreviation) that HG originate from A⁵ M, A¹⁻⁴ from AMG, and A⁵M from HAMG. By omitting irrelevant limitations we have but to note that the wind- and fire-beings have no direct pre-existence as gods. But the post-existence following immediately may manifest itself (comp. also Sūy II 3, 1 ff, 347 a; Pannav 398 ff; Viy 632 b; Thān. 58 b, 445 b) in the following way. H to A⁵M, G to A^{1.5}M, T¹⁻⁴ to AM, A⁵M to HAMG. In this case the wind- and fire-beings are specialized in that they will not reincarnate into men, whereas gods will not reincarnate into them, as obviously follows from what was said before. As we are taught by the formula quoted above, an A⁵M may even repeatedly appear in the same form of existence. In contrast to the *bhava-tthū* this is called *kāya-tthū* (Thān 66 a).¹ Pannav 18 (374 a f) deals with it. We here but mention the exceptional position taken by the *ṇigoya* which is that they are able to remain as such for ∞ time. They are those that are refused any higher development (§ 101).

§94. Next to the purely systematical representation Viy. gives a number of more lively informations serving confirmation, a fact from which we may conclude that in those days this assertion was considered a novelty. Expressly it was disbelief that caused the teaching (Viy 739 b) that an earth-, water- or plant-being in its next existence (*uvattittā*) could come to appear in a human shape and gain the Kevala cognition. The phenomenon of the hot spring at the foot of the Vebhāra near Rāyagṛha (Viy 141 a) is brought about by numerous souls destined to have a hot place of origin, and atoms assembling (*usina-joniyā jīvā ya poggalā ya*) and forming water (*udagattāe vakkamanti vuukkamanti cayanti uvavajjanti*)², rain originates from the formation of water by *udaga-joniyā*-souls and -atoms; plants live most intensively in summer because then

¹ The quantity of life is corresponding called *bhav'āyā* and *addhāyā* (*addhā*=*kāla*, see the same and 96b)

² Comp also Sūrap 321 a

many souls enter into plants (*vanassaikāyattāe vakk.* Viy. 300 a). An animal may have experienced the existence of hell, as have the elephant Udāi and his colleague Bhūyānanda (Viy. 720 a), who both, however, will find salvation in their next existence. A god, circumstances permitting, may materialize as a serpent, a precious stone or as a tree (Viy. 581 b). To enter into a lower stage of existence (*avrukkantiyaṃ cayamāne*) causes shame, discomfort and vexation within him (Viy. 86 a). Viy. in 652 b minutely depicts the next form of existence pertaining to a Sal-tree or -twig, etc. By example of an extensive list of plants, first of all trees, Viy. 21-23 (Viy. 800 a ff.) show that plant souls come from the animal- or man-stage, though it has to be noted that here the emphasis is on the simultaneity of the incarnation partly basing on the fact that certain plants are the bearers of several or many souls (§ 106)—so acc. to Viy. 508 b the *upphala* and others are bearers of as many souls as they have leaves (*patta*)—, and that, acc. to Viy. 800 a, root, branch, bark, etc. each contain one soul. But as is maintained by Viy. 796 b, Thān. 104 b, also all other beings are given the possibility to reincarnate simultaneously and, what is more, to do so by changing their stages (for them see above). In contrast to those that do so individually (*avvattaga-saṃciya*) those that in a number of x enter into a new stage simultaneously are called *kati-saṃciya*, and those that do so in a number of j *akati-s*. The occurrence of groups of six (*chakka-samajjīya*), 12 and 84 is treated with all the delight taken in such calculations, the same that equally shows up in Viy 31 (948 a f.) from the point of view of the sum (§ 21) of beings.

§95. Other problems related to the question of simultaneity (Pannav. 204 b, 208 a) may be left aside here. Instead we come to discuss the process of reincarnation itself. Released by the *māraṇ'antiya samugghāya* from the particles of the hitherto *āyua-kamma* the soul moves towards the new place in order to take its house there. But this is but the one possibility open to it. The other one mentioned together with it consists in the soul returning (*paḍṇiyattai*), performing the *āyua*-ejection once again and then definitely taking its home at the new place.

destined for it by its deeds—while one-sensed beings may do so at any place ¹ This theory appears in Vīy 272 b only and does not recur in the Pannav. The vehicle by means of which the soul changes its place is the Kārman body (T 2, 26), and it seems that this is its particular and only function. The new place is reached by following either a straight or bent course (Vīy 85 b), and to move on the latter is called *viggaha-gai*.² Acc. to Mahāvīra (§ 21) there are seven of such courses (*sedhu*) of substance particles, aggregates and beings (Vīy 866 b; Thān. 705 b) among which we find the straight one (*ujjuy'āyaya*) and both the one bent once and twice (*egao-vamḥa*, *duhao-v* (but see also below). Each straight distance takes 1 *samaya* (Vīy 630 a), *egao-v* means two, *duhao-v* three *samaya* time of travel, while one sensed beings may partly need even four. This is (Vīy 630 a) still a speed leaving behind all earthly comparisons. In this connexion we must know that the upward- and downward-movement takes place within a shaft (*nālī*, Vīy. 957 b) measuring 100,000 *yoj* in diameter which goes through the whole world perpendicularly and confines the places of existence of most beings. As far as the starting point and the place of destination within this shaft, called *trasa-nāḍī* by later authors, are situated on one level it takes the soul but 1 *samaya* to cover the straight course (*ega-samaya viggaha*). If, however, we have a different level the soul first will move either up- or downwards in 1 *sam* and then horizontally to its place of destination (*du-s v*). If the place of destination does not lie, as was assumed above, within the range of a main direction but in that of a side direction, first the one (by a *sama-sreṇī*) and then the latter (by a *visedhī*, *visreṇī*) has to be gained (*du-s -v*, *ti-s v*). Now, if, as is the case with all one-sensed beings known to be spread world-wide in unrestricted numbers, the starting

¹ *atthegae tao padiniyatḥai, tao padiniyatḥittā iha-m-āgacchai, iha-m-āgacchittā dokaṃ pi māraṇ'antiya-samugghāyaṃ samohanai, samohanittā* (. . . *nerayattāe* etc) *utavajjittā* (thus instead of *ottae*) *tao pacchā āhārejja* etc Vīy. 273 a

² But Vīy 955 a also gives (*ega-samaya*) *viggaha* for the straight one (see below).

point lies without the *nālī*, then it follows that the soul can equally enter it from a main direction only, and not until doing so by an intermediate direction will the soul be able to gain it (*ti-s. v*, *cau-s. v.*). Indeed, in case it should happen that the place of destination equally lies in an intermediate direction, the soul would need another fifth *sam* (Viy. 287 b), as is the opinion of some authors, though Abhayadeva professes (Sthān. 177 b) it to be his own. But the text does not go beyond 4 *sam*. and confines them to the one-sensed beings.¹ For this comp. Viy. 287 a, 632 a and Saya 34, 954 b ff., but especially Vy. offering details on these passages, and Thān. 177 a.

§96. The *samaya* dealt with above form an intermediate time (*antara*) between the existences. The *antara* is taught by Viy. 439 a=Pannav. 207 a and Viy. 632 b, and it is obvious that the beings are both *santara* and *nirantara*, the latter being the case when they are able to avail themselves either of the *ega-samaya*-or the *ujjuy'āyaya*- course. In contrast to this it is not clear why there is explicitly no intermediate time given for the one-sensed beings since we know them to move in 4 *sam*.² With the last of all travel-*samaya* there begins the taking in of matter, the *āhāra* (Viy. 287 a). That is why the souls on the way are considered to be *anāhāraga* as follows from Pannav. 512a. It happens, though, that the intake of matter precedes the change of place (Viy 729a, 789 a), i e. when an earth-, water- or wind-being has performed the *māraṇa-samugghāya* imperfectly (*desenaṃ*) We are not told why and when this happens. The intake of matter is understood to be an activity, *joga* (Viy. 854 a), and the *joga* of two beings in the first *samaya* of reincarnation (*padhama-samaōvavannaga*) is unequal in kind when the one has arrived without and the other with a change of direction. By starting earlier the one is ahead of the other (*abbhāhīya*). *āhāra* (acc. to Thān. 120 a one of the movements of the *poggala* happening without a force acting from without means) both the

¹ Umāsvāti in T 2, 31 does not know of any *catuh-samayika*, whereas Devanandin does

² By comparing § 187 it is equally striking that the Siddhas *syjhaṇti* both with and without *antara* (only Pannav 207 a)

intake of matter for the purpose of reincarnation (comp Viy. 701 b) and the attraction of atoms on the whole, especially for eating. This in the first line follows from the *Āhāra-paya* Pannav. 28 (498 b). The theory distinguishes between the *āhāra* in *ābhoga-nivvattiya* and *anābhoga-n.* (498 b), i.e. between the *āhāra* which, or, rather, the satisfaction of a demand for being supplied with matter (*āhārattha*), rests on intention (*ābhoga*) (comp also Pannav 544 b), and the one that happens unintentionally. In the first case we find also the omission of the meal in the fast of the *cauttha-bhatta* (§ 156). The attracted mass is called *avīci-davva* acc. to Viy 644a when being complete, and *vīci-d* when lacking one or more *paesa*, but we hear nothing more in detail about it. Moreover the *āhāra* is *lom āh.* (first mentioned in 506b) and *pakkhev'āh*, and we are tempted to understand by it either continuous or dosed supplies. But the *loma* concerns undifferentiated appropriation, whereas the *pakkheva* concerns the taking of food through the mouth.¹ In addition to these two ways of taking in matter (*oy'āhāra*)² there is the quality of *mana-bhakkhi* pertaining to gods who attract matter by mere wishing.³ Regarding the remaining contents of Pannav. 28 we may but mention that those beings owning a body of transformation take in inanimate matter only, while those having an earthly body take in both animate and semi-animate matter (*mīsa*) additionally (498 b). The beings take in such matter as is found within the range going to be occupied by their bodies, at least this may be supposed to be the meaning of *atta-māyāe* and *āya-sarīra-khetta* (Viy. 286a). Any more closely or more distantly neighbouring ranges are out of the question, and thus for special magic cases it is always being expressly stressed that it concerns *bāhīrayā poggalā*, so Viy. 189a, 190a, 282b. The actual process of reincarnation, however, appears to be described, in the beginning of Pannav 34 (534a—Samav 145b), as follows “(beings of hell and five-sensed

1 In this sense Thān 263 b describes the *āhāra* for the 4 stages of beings partly in the way of comparison.

2 *oja ulpatti-deṣe āhāra-yogyah pudgala-samūhah*, Prajn 510 a

3 Comp Charlotte KRAUSE Z I I 71, 272 Comp Sūtr 342 b ff.

beings) start on their way by taking in matter immediately after having reached the place (*anantar'āhāra*). Then they are busy with developing the body (*tao nuvattanā*), then they let the stages of development follow one another (? *tao pariyaṇayā*), then they produce the details (*tao parināmayā*), then they allow their faculties to act (*tao pariāranayā*),¹ then, finally, they convert what has been acquired into individual materiality (? *tao pacchā nuvvanayā*)''². As to gods the two last stages have changed places. The place where this process happens is, of course, the resp. place of origin (§ 63) From here the soul once again starts on its course. As (Viy 927a) the monkey (*paṇḍava*) swings from one place to the next, so the soul wanders from one existence to another, and like the monkey it does so on its own determination (*ajjhavasāna-joga-nuvattienam karanōvāenam*) It enters into the new life as a whole (*savvena savvam uvavajjai*), real (*santo*), independent (*sao*), by itself (*sayam*), on its own responsibility, and through its own Karman (*ā'iddhīe, āya-kammunā*), by force of good (*subha*), evil and mixed deeds (Viy. 84a, 454a, 796a, 927b).

§97. *The Colours of the Soul.* The Karman does not only effect the fate of the soul, but it equally supplies it with a conditional quality reflecting the moral level, and as such is called by the name of *les(s)ā=leśyā*. We are of opinion that this word has to be derived from *lesa*³ which, on its part, has not been explained etymologically as yet. By means of the *lessā* the Karman imprints (s.b.) a character upon the soul by qualifying it with colour, taste, smell and feeling. Since these qualities are of a material nature, this possibly expresses a relation to particles (*lesā*), and we have reason to assume that an adjective *leśyā* was changed into a substantive. The corresponding

1 On account of this word the phrase was placed in the *Pariyātanā-paya Pannav* 34

2 See the AUTHORS's *Religionsgesch. Lesebuch* 7, 21. Comp. the sequence *āhārenti parināmantī sarīraṃ bandhanti* ("build") Viy 762a, 773b,

3 In accordance with CHARPENTIER *Festschrift Johansson* p 38 JACOBI derived the word from *kleśa* (SBE 45, 196) When putting (e.g. *Prajñ* 330a) *liśyate=śliśyate* the commentators might refer to *laṇha* aside with *saṇha=ślakṣṇa*. But that is all there is to it

feminine noun may well have been *chāyā* "light, brilliancy, colour", for this is the non-technical meaning of the word *lessā*¹

The *lessā* or the "type of the soul", as LEUMANN (Aup.) named it, is represented (Thān. 361b; Samav. 11b, 145b) by the six colours of black (*kanha*), dark (*nīla*), grey (*kāu*), yellow (*teu*), pink (*ṣamha*) and white (*sukka*) each of them being determined in the *Lessā-paya* (Pannav 17 (360b) by a number of comparisons which, however, are said not to reach up to "reality". The same is done with taste (*āsāya*, 264 a), and moreover, the first three are considered as evil smelling and unpleasant, the last three as good smelling and pleasant (266b; Thān. 175a) Gradations in each of the qualities—of which taste, smell and feeling range far behind colour—are calculated by subdividing them by three into minimum, medium and maximum up to 3⁵, and atoms (∞), their categories (*vaggaṇā*, ∞) and space volume (2 units) are determined (367b). Thus it follows that we are fully concerned with a material product of the Karman, that is, so T, 2, 6 says, with a product of its realization (*udaya*). Likewise there is no doubt that we have the insertion of the primitive idea¹ of the moral qualification of the soul by colour being adapted to Jain dogmatics By ascribing the second effect to the Karman the juncture becomes clearly visible. Moreover, this gives proof of the secondary character of the *leśyā*-theory that it might stay out of the system without leaving a gap in its composition.

§98. Together with the infinite variety of actions it is also its resplendence that changes continually,² just as the soul is accompanied into the beginning of its new existence by those *lessā* only that it had in its hour of death (Viy. 188 a). But it

1 The usage of *lesa* in the sense of *mana* follows a different course, we find (Āyār I) *abahi-lesa* aside with *a-mana* in the meaning "of not allowing one's thoughts to be distracted" and with the object of female distraction (Thān 331 b) *magganthīe bahil-lesa*

2 The Ājivikas equally have it, comp Sumangalavilāsini on Digha-Nikāya II 20 There we have *abhijāti* for *lessā* in connexion with a colour The *sukkābhijāya* is also found in Viy 656b where Vy, however explains it as *parama-sukla*

3 And also with its annihilation The beings, so Viy' 39b teaches, have a lighter *lessā* when being older, a darker when being younger (*puvva-vannaga* and *paccho' iav*) Only with gods it is the other way round,

is in the nature of the grades and classes of the beings that their behaviour is limited, and correspondingly their *lessā* moves within certain ranges (Pannav. 343 b; Ṭhān. 115a, 237b), so that beings of hell, fire, wind and lower animals will not reach beyond the third (grey) *lessā* and all remaining one-sensed beings not beyond the fourth (yellow). It may be noted that even female gods will not reach farther, whereas their male partners have all six and those of the highest standing but the last three. Also humans and five-sensed animals are capable of all *lessā*.¹ The way how a *lessā* passes over into another one (*pariṇāma*) is explained by comparisons in Pannav. 358 b.

The qualities determining a *lessā* are represented in Utt. 34 along with the whole of their theory. We need not quote from Pannav 17 in which way the five kinds of cognition divide among the bearers of the six *lessā* (Pannav. 357 a), but we have to point out that though the Kevalin during his stay on earth (*sajogī kevali*) still has the white *lessā*,² the Siddha has no longer any of it. That is why in the canonical expositions, e.g. Viy. 40b, the *salessā* are particularly mentioned wherever circumstances ask for it. The *ohi*-cognition so characteristic of the beings of hell extends the farther the brighter the *lessā* is, just as from the top of a mountain we see farther than from any point in a plain (Pannav. 355a). Things are different with the Karman: as said by Viy. 300b, a being may have a darker *lessā* with a lesser Karman and a brighter one with a stronger, i.e. when the owner of the darker *lessā* has annihilated his Karman stronger in itself down to a remainder smaller than the whole Karman of the owner of a brighter *lessā*. So in Vy. the explanation of the text words *ṭhuṃ paḍucca*.

§99. *The Actions.* In the passages above the word *kamma* signified the "action" in a metaphysical respect. We can

¹ Thus Ṭhān 175 a distinguished the act of dying as a *ṭhiya*-, *samkhiṭṭha*- and *pajjavajjāya-lesa*, according as in the existence to come the *lessā* remains the same, grows dim or brightens (v KAMPTZ, Sterbefasten p 15)

² That is why the favourable *lessā* becomes still purer (*pasatthāo lessāo visujjhamāṇo*) when Malli attains the highest grade of cognition (Nāyādh. 152 b).

(Viy. 768a) distinguish the beings as *mahā-* and *appa-kammata-rāga* according to the more or less of Karman (and, equally, of influence —*āsava*— and sensation —*veyanā*). Thus (Viy. 228b) a freshly lit and a dying fiery body are called *agani-kāya* according to their greater and smaller activities. So, where Viy 767b compares action, sensation and annihilation on the different stages, we should, correspondingly, expect to find the word *kamma*, but what we find is *kiriyā*. This word is preferred when thinking of concrete actions even when abstract fundamentals are concerned. Such is the case with the *saṃpharāyā* and *iriyāvahiyā kiriyā* (Viy 106a and elsewhere), and, moreover, with the statement (Viy 79b) that an offence against the main commandments—by which offence however, we but have to understand the specialization of a general law—goes back to contact and to one's own doing (*pāṇḍivāenaṃ kiriyā... puṭṭhā kajjai, kaḍā k,*) and follows a course (*ānupuvvīṃ k*). It is also common opinion that an action even while being performed equals one completed.¹ This is stated immediately at the beginning by Viy. giving a selection of the most different kinds of activities (13b), we repeatedly come across it in the course of the book (86a, 582b, 706b), and it is even maintained against contradicting teachers (102b f., 379a).

Just as these questions occupied the minds (to which degree, it is shown by the various antitheses Thān. 39b ff.), so the classification of the actions was a problem. Sūy. II 2 gives and supports by examples 13 cases of activities (comp. also Sthān 316b; Samav. 25a): 1 to 5 are called *daṇḍa-samāyāna* thus being characterised as acts of violence, while 6 to 13 stand for activities of an otherwise blamable kind, though, to be true, the list ends up by kind to be observed by the monk (*saṃpharāyā*). They all are based on offences against the fundamental commandments as far as they are involved, i.e. the first, second and third underlie the cases 1 to 7, and the four passions of anger (10), pride (9), fraud (11), and greed (12), though it has to be observed that anger appears in the shape of an offence against

1. Comp the AUTHOR's Worte Mahāvīras p 24 f. In the German translation p 24 read "nach Konsonant und Vokal" instead of "nach Klang und Schrift."

friends (*mitta-dosa*). 8 is the (evil) state of mind (*ajjhattha*). Thān. 316a leads the discussion over into the field of theory and sets up actions in groups of five the first three of which appear here only and, partly, also in Thān 39b f The *first* of these groups—provided the interpretations prove true—concern an activity for the purpose of seeing (*ditthiyā kiriyā*), touching (*putthiyā k*), on the ground of certain outlooks (*paducciyā k*), of the conform judgment of persons closely concerned (*sāmantā-vanivāyā k*) and performed by one's own hands (*sāhatthiyā k.*). The *second* group calls the *kiriyā* a *nesatthiyā*, *ānavaniyā*, *veyaranī*, *anābhoga-vattiyā* and *anavakankha-v*, by which an action may be understood resting on an order,¹ on communication, on permission, and brought about without thinking and willing participating in it. The *third* group refers to an action strictly confined to humans which may go back (*-vattiyā-k.*)- to affection (*pejja*), antipathy (*dosa*), plan (*paoga*), going for alms (*samudāna*) or wandering (*iriyā*). Nearly everywhere the commentary (Sthān. 42a ff, 317a) is uncertain, and, partly, no doubt goes wrong. The sub-division can be omitted here.

§100. Two further groups must have come to gain a more distinct canonical significance since they are dealt with exclusively on the ground of the *Viy* in the *Kiriyā-paya* 22 of the *Pannavanā*. They also appear in Thān. 316a, 284a and Samav 10a. *Viy* 228a teaches the following. A vendor who follows up a stolen object in any case commits an *ārambhīyā k*, possibly even a *pariggahīyā k*, a *māyā-vattiyā k*, an *apaccakkhāna-k*, or a *mucchādamsana-k*. The text carries on the casuistry by saying that, according to the situation, now all five and then again but the first four actions are either with the buyer or the seller. The interrelation is represented by Pannay 446a. The action is either committed for a set purpose, for intentional appropriation, or emotionally, or it rests on non-renunciation² or on heterodoxy. In humans they correspond in the following

1 *nesatthiya* cannot belong to *si*, but rather to *śās* Umāsvāti, however on T 6, 6 gives *nisarga* similar to Sthāna

2 About this comp also *Viy* 101 a

way either necessarily (*niyamā*), +) or possibly (*siya*; *bhaijjai*, ±):

	<i>tassa ār.</i>	<i>p.</i>	<i>m.-v.</i>	<i>ap.</i>	<i>mi.</i>	<i>kajjai.</i>
<i>jassa ār. kajjai</i>		±	+	±	±	
„ <i>p.</i> „	+		+	±	±	
„ <i>m.-v.</i> „	±	±		±	±	
„ <i>ap.</i> „	+	+	+		+	
„ <i>mi.</i> „	+	+	+	+		

Hence, e g every purposeful action is emotional, but not every emotional one is purposeful.¹ In such statements we are able to discern an approach to psychology for which in the first mentioned groups we are looking in vain.

The group of the *kāryā*, *ahigaranīyā*, *paosiyā*,² *pariyāvanīyā* and *pāṇāwāyīyā kiriyā* is of a still greater importance which follows from the conception in Pannav. 436 ff. It is proved in Vīy. by quite a number of examples (91b; 697a; 717a; 720b f., also 377b; 491b, 703b). We here but mention 91b, where a man hunting game makes himself guilty of the first to the third, the first to the fourth, or of all five of those actions, according as his intention is directed merely to the means of killing (*uddavanayāe*)³ or to catching the animal or even killing it. Or take Vīy. 229b, where an archer from the preparation of the bow and the arrows up to his shooting them into the air commits all five actions in case he hits a being by doing so.

And what applies to the archer, applies as well to the bow, the arrow, the sinew, the arrow-feathers, etc.⁴ If, however, beings are injured by the arrow falling down on them from the air, then the above mentioned objects have committed but the first four actions, whereas those beings catching up the falling arrow (? *uvaggahe cītthanti*) have committed all five. As is shown by Vīy 181a, Thān. 39b, Pannav. 435a and also by the sub-division (which may be left aside), it concerns physical, instrumental, hostile, tormenting and murderous action. Here,

1 This, however, contradicts the passage of Vīy. where the *māyā-vattiyā k* was not obligatory beside the *ārambhīyā*

2. Frequently written *paosiyā*.

3 This is the substantive for *miyassa vahaḥ kūḍa-pāsaṃ uddāi* at the same place.

4. Obviously the weapon is supposed to be animate, comp. § 101.

too, acc. to Pannav. 443b a table of the mutual relativity might be drawn up. But we dwell on it as little as we do on the bridge which (439a) is thrown for binding the *kamma-pagaḍi*, and on other statements. The five groups of 5 each as presented above, reappear as the 25 *kriyā* in Umāsvāti's Bhāṣya on T. 6, 6, though partly in a different composition which may, perhaps, be ascribed a greater logical coherence than presented by the passages of the Canon.

§101. The technique of monachism is touched by the special action called *anta-kiriyā*. This name is connected with the frequently (e g. Sūy. II 2, 83; Uvav. § 56 (p. 62)) recurring solemn phrase speaking of "to reach the last goal, to wake up, to become free, to fade away and to put an end to all pain", i.e. *savva-dukkhānam antaṃ karittae*. Thus *anta-kiriyā* is equal to *mokṣa*, salvation.¹ It, too, is represented systematically in Pannav, 20 (369a ff), and by learning (396b) for which kind of beings it is either *anantar'āgaya* or *paramphar'āgaya*, i.e. taking place either in the immediately subsequent existence or in a later life, we are confirmed (§ 93) that in his pre-existence a man may belong to any stage of being. Man and man alone is given the possibility to "put an end" and to reach the highest goal. But from this we have to distinguish the other possibility of coming within the range of hearing the sacred teaching (*kevali-pannattaṃ dhammaṃ labhejjā savaṇayāe*), of taking delight in it, and of acting according to it in all fundamental things. All five-sensed animals are equally given this opportunity (Pannav. 398b), and they can advance to the *ohi* though, to be true, they are not able to enter into monachism. This reminds us of the frog, as an example among others, who dies by uttering the formula of veneration *namo tthu naṃ* (Nāya 13).² This, of course, implies that the corresponding Karman has been formerly bound, and it expressly

1. In persons of the sacred legend Thān 180a distinguishes four kinds of the *a-k* according to the greater or smaller amount of Karman they possess and to their longer or shorter monastic lives

2. An example from the later legend is the tigress in the story of Sukosala (v. KAMPTZ, Sterbefasten p. 37)

concerns (Pannav. 402a) the hero- and Tīrthakara-ship (§ 13). A Tīrthagara in his immediate pre-existence may have dwelt in hell (though in its upper regions only)—his Karman has now turned him into a superman Pannav. 403 b gives corresponding examples with regard to world emperors, heroes and high dignitaries—including the Queen Consort (*utthi-rayana*-), to state-animals (*āsa-r*, *hatthi-r*) and, most remarkably, also to seven certain crown jewels (comp. § 13) which count for being one-sensed, as we know from Jambudd 260b, Thān. 398 a.

Anticipating the style of the successive comments the Antakīryā-paya of the Pannav begins by saying (369a). *atth'egare (jīve anta-kīriyam) karejjā, atth (j a-k) no karejjā*¹ This means that not all souls are able to find salvation It was Vīy 285b that had expressed it a being of the one stage or the other may be capable of salvation, but this does not apply to every being of this or that stage While the canonical word is either (a)*bhava-siddhiya* or *-siddhīya* (Samav 2b, 8b, etc. 45b, 47b), Umāsvātī speaks of (a)*bhavya*. Acc to him (T. 2,6) this quality pertains to the qualities inherent in the soul (*pārīnāmika*) (§ 60) What is said by Vīy. 557a is but seemingly contradictory to it While the former says that the capability of salvation is *sabhāva*, not *parīnāma*, the latter makes us understand that it is not an acquired, but a natural quality, All souls that have it (so it is continued to be said) will come to enjoy salvation, but never will the world be void of souls capable of salvation. From this contention of Mahāvīra's (which Jayantī hears with amazement², and which he substantiates by a comparison with the atoms) we understand that the *bhava-siddhiya* replenish themselves on and again. In order to grasp its proper meaning we obviously—though the text does not say so—have to anticipate the theory of the *ṃgoṃya* (§ 104). These plant souls distributed throughout the world in ∞ number constitute the inexhaustible stock of souls, as far as they are subtle (*suhuma*) and undeveloped (*apajjatta*). As soon as in

1. Vīy 49a refers to it

2. "se kenam kh'āi nam (print khāienam) aṭṭhenam bhante, evam
vuccat . . ."

such souls development starts causing to participate in the world course proper, there appears the possibility of salvation. if once *pajjatta*, then they are partly *bhava-siddhya*, partly not. By what impulse the development and the capability of salvation are being brought about, is not said in the texts of the Canon.

This class of the *ngoya* form the polar contrast to the Siddhas. Of both there exist innumerably many, but while the *ngoya* fill up the entire space of the world, the Siddhas are confined to its highest region (§ 187). The former will not live longer than for 1 *muhutta*, the latter for ever. The former represented the lowest possible stage of development of a being, the latter the highest that can be thought of. In both of them we see the foot and the head of the ladder formed by the occupants of the world. The undeveloped, subtle *ngoya* are not yet subjected to the Karman law, whereas the Siddhas have left it behind

V

COSMOGRAPHY

§102. The “cosmic system”—by which name we intend to comprise both the general plan of the cosmos and the organization as well as the activities of its occupants—is, in contrast to renunciation and world conquest (see Chapters VI and VII), a given fact just as is the “world course” (see Chapter IV). The great amount of details ask for an individual treatment of the subject which, however, as to the cosmographic plan will be restricted to the more important items (of which there will be still enough after all), since, on the one hand, we have more or less comprehensive descriptions at our disposal already,¹ and since, on the other, vagaries not based on ethical grounds and hence being empty are not attractive to dwell upon. In order not to overcharge our text we, therefore, frequently disregarded to deliver detailed proofs, all the more since the passages in question can easily be traced from chapter III. The main sources are Pannav. 1. 2; Jīvābh. III with the Dīvas; Jambudd and the cosmographic sections of Thāna and Samavāya.

§103. There is (Thān. 1 b; Samav. 1 b) but one world (*loga*) and beside it but one non-world (*aloga*). The latter surrounds the world on all sides like a hollow sphere (Viṃ. 522a) and is out of reach, since beyond the boundaries of the world the medium of motion is absent (Viṃ. 717 b). The extension of both is illustrated (Viṃ. 525 b) by describing the speed of divine personalities and the distance they are able

¹ The cosmographic plan has been described in all general representations, of the system, first of all in those by Mrs. STEVENSON, v. GLASENAPP, GUÉRINOT (§ 46) KIRFEL in his *Kosmographie der Inder* (Bonn 1920), pp 208-339—reviewed by the AUTHOR ZDMG 75, 254-275—and in the *Bilderatlas zur Religionsgeschichte* (Lpf 1928), No 12a (ill.) deeply goes into details. Comp also PULLÉ in *La cartografia antica dell' India*. P. 1 (SIF II 4, 1900), BARNETT, *Antag* pp 137-141. and, finally BASTIAN, *Ideale Welten*, vol 3 (Bln. 1892), A. C. Sen IHQ, 8, 43-48,

to cover by it; in figures the world measures $\frac{1}{2}$ times 10^{14} *joyana*¹ in all directions (Viy. 579 a) Seen in its vertical cross-section it narrows from below to the centre and then widens again in nearly the same degree to above (Viy. 248a; 616 b). Both the summit and the base are built up in a convex shape. To make it plain we may compare it with an 8 of equal halves rotated round its axis Canonically, however, the three sections (Thān. 126a)—we call them by the names of the lower, the centre and the upper world²—are compared with a bed to rest on (*palīyanka*), a so-called thunder-bolt (*vara-vaira*), and an upright standing drum (*uddha-munga*)—this following the teaching of Pāsa (Viy. 248 a); acc. to Viy. 522a the lower and centre section are even illustrated by a couch (*tappa*³) and a cymbal (*jhallaṛi*), resp For the whole Viy. 522 a; 616 b apply the comparison with a *supaṭṭhaga*, i.e. a “broad-bottomed” vessel By these conceptions it is demonstrated as good as certain that the horizontal cross-section was thought to be circular. The calculations, however, drawn from the Lokaprakāśa of the Śvet. (composed 1708 A.D.) by KIRFEL⁴ prove that its author imagined the world as three pyramids one upon the other each having a square base and rising in steps on all sides, the centre one of which standing on its top surface, whereas the description given by the Dīg⁵ shows three roof-like bodies of the same unchanging length but of a steadily de-, resp increasing width In the Canon we read of these details as little as we do of the unit of measure of *raju*, “rope”, by means of which the proportions of the parts is being expressed⁶ With the height of the whole

1. $1 \text{ kodākoḍi (Jiv kodikoḍi)} = 10^{14}$

2. Acc to Thān 171 b the upper world causes the least, the lower world the greatest difficulty for understanding (*abhigama*) (The passage is a fragment)

3. *talpa*, not *tapra* (*uḍupaka Vy*)

4. Kosmographie, p 210 f

5. Comp. Brahmadeva on Davvasaṃgaha, 20 (SBJ 1, 47 ff) Virasena in Śaṭkhaṇḍāgama Vol 4, p 11 f and Introd p II gives *tala-rukṣha-saṃphāna* as the shape of the world

6. The *raju* which is nothing but a proportional number has also been made to be some kind of an absolute quantity (Comp COLEBROOKE, Misc. Essays III. 1983.)

world measuring 14 *r*. the upper and the lower world each come to 7 *r*. (the centre world is not considered) The width of its base decreases from 7 *r*. down to 1 *r* in the centre world, in order to increase again to 5 *r* (§ 129) and then to decrease once more down to 1 *r*. A third non-canonical conception refers to a world of human appearance¹ (as *loka-purusa*). This easily makes itself clear by the mere outline of the whole which, moreover, certainly accounts for the name of the Gevejaga or "neck" regions (§ 129) and the expression of *loga-matthaga* (Dasav. 4, 25).²

§104. Along with the shape and the organization of the world and its different sections we shall equally consider the beings they contain, and we feel entitled to do so by the fact that the tabular treatment they receive in the dogmatic texts ascends in stages through all three worlds; the inhabitants of hell are followed by those appertaining to the classes of gods which belong to the uppermost stage of the lower world and the upper world, they again are followed by the prestages of the animals and their lower classes, by the higher animals and men, and, finally, by the gods of the upper world and the Siddhas on a still higher stage Outside dogmatic teaching the entity of all beings is called by the words of *pāna bhūya jīva satta*, certainly without making any discriminations by doing so, as the commentators want it³ According to the number of their senses all animals (*tirikkha-jonīya*) down to their most simple forms are called one- to five-sensed (§ 118) As is the case with all beings, they are either fully developed (*payjatta*) or not (*ap*), to which we ask to comp § 63 The one-sensed beings (*eg'indīya*)—so called since they have nothing but feeling—are the animate smallest particles of earth, water, fire, wind, and plants As occupants of these particles or accumulations of matter (*kāya*), their souls and equally the beings them-

¹ But by no means of an expressly female app as GRÜNWEDEL, Alt-Kutscha I, 47 gives it The interpretation of the corresponding figure 20 (see also KIRFEL, Bilderatlas) is certainly very doubtful

³ In a frequently (e.g. Jiv. 305 b, Prajn. 131b, Ācār (old ed) 80, 15) quoted verse, but comp Ācār 162a 12

selves are called *pudhavi-* etc *-kāya* Their number in any of their kind is 3, as is the case with all beings in the Samsāra, with the only exception of the plant souls whose number is ∞ (Pannav. 179 a) The one-sensed beings occur both in a form so fine that no sense is able to conceive it (*suhuma*) and in a concrete (*bāyara*) shape In their fine form we find them, indifferentiated within their kinds, all over the world (*savva-loya-pariyāvannaga*, Pannav 71 b)

Among the plant souls or *vanassai¹-kāya* we also find the *ngoya* or *noya-jīva* Jambūdv. 171 a, Vy 309 a explain *ngoda* by *kuṭumba*, which makes us think of *nyoka(s)* As mentioned above, the *ngoya* (Viṃ 889 b—Jīv 423b, Viṃ 764 b, Pannav 381 a) are both fine and concrete Originally, however, the name is certain to have belonged to the former (*suhuma*) only This is explained not so much by the word of *ngoya* (without an adjective) standing side by side with *bāyara-n*. (Pannav. 381 b) than by an objective exceptional position The above mentioned ∞ number of plant souls goes to the debt of the fine ones among them, they alone may stay for an infinitely long time in the same form of existence, whereas the remaining fine elemental beings (to say nothing of the higher ones) can leave it, at the latest, after an indeterminably long (ε), i.e. after all a measurable time (Pannav 377a, 381b). This is the so-called *kāya-tthū*, the uninterrupted sequence of existences having the same form (§ 93), i.e. existences each of which ends within one *muhutta* in a fine form in the elemental beings and plants regardless of either their complete or incomplete development (Pannav 171b). Hence the fine undeveloped *ngoya*, though it pertains to the Samsāra, yet does not take part in the up and down within it, until it starts to develop By this way it is the intellectual and actual counterpart of the Siddha (§ 101). The Canon does not supply us with any detailed information about a certain way as to how the *ngoya* fill up the entire world It is most probably a post-canonical conception acc. to which these *ngoya*

1 Also *vanapphai*.

form in 3 numbers into 3 minute balls (*gola*) each having ∞ souls—which for their part permeate all and everything.¹ Pannav. 39a speaks of an *aya-gola* only by way of comparison.

§105. The concrete (*bāyara*) elemental beings do not occur in the same way everywhere in the world, but we find them in all of its three sections. They represent the palpable occurrence of the elements, and, to mention but some of them, they appear in the forms of earth, minerals, metals; of water, clouds, snow, of flame, coal, lightning; of breath, wind, storm. Their concrete shapes are, resp., those of the lens, the drop (*thibuga*), the quiver, and the flag (Thān 234b; Jiv. 11a, 24b, 27a, 29a, Pannav 410b) The animate elements of earth, water, and wind² appear in a concrete shape (Pannav. 71b ff) except in the centre world at all obvious places also within the sphere of the subterranean and heavenly dwellings and, naturally, also in the structure of the hulls enveloping the lower world (§ 107) In the watery hulls there are also concrete vegetable bodies with their souls; acc. to Vīy. 278 b clouds come into existence also in the lower world and in the upper world as a work of gods (*deva, asura, nāga*). Fire only is confined to the centre world as far as it is inhabited by men. It comes into being at a fire-place (*ingālakariyā*), but it comes to glow (*ujjalai*) only when joined by the wind (*vāuyāya*) (Vīy. 696 b). The lower (two- to four- sensed) and the higher animals (*pañcendīya tirikkha-jonīya*) occur in the lower and centre world at places where, according to their kind, they belong (*tad-ekka-desa-bhāe*) We shall consider them when dealing with the centre world (§ 113).

§106. The concrete plants, acc. to Pannav. 30a ff. (in prose and nearly 100 Gāhās), fall into individual plants (*patteya-sarīra*) and group plants (*sāhārana-s* Vīy 762a), the latter a.o. lichens and mosses, without any subdivisions, but very rich in

¹ Comp the Nigoyachattisī incorporated by Abhayadeva in his Vy vrtti (528a ff) Nig 12 appears in the Kālaka legend, comp AUTHOR OLZ 1933, col 451

² Wind caused by walking, blowing, pressing, etc is inanimate (*acittī*) Hence as to this statement Thān 334b ought to have *vāu-kāya* instead of *vāu-kāya*

variety. The more highly developed individual plants are divided twelve-fold acc. to their habit into trees, bushes, shrubs, creepers, grasses, etc. Trees are subdivided into two groups, the mono-kernels (*eg'atthiya*) and the multi-kernels (*bahu-biyaya*). On grasses (*tana*) it has been observed that they bear seeds at the top, at the roots, at the stalk, and at other places (Dasav. 4, introd, Ṭhān 186b, 322b, 354b). The five classes of *rukkha*, *ayjhāroha*, *tana*, *osahi*, and *hariya* (Sūy. II, 3) joined by a sixth bearing no name of its own, look older than the duodecimal classification. Both classifications are now crossed by one classifying according to the number of souls within a plant. With its quality to have more than one soul the plant stands alone in the realm of living beings¹. The seats of these souls are the roots, the bulb (*kanda*), the stem, the bark, the branches (*sālā*), the twigs (*pavāla*), the leaves, blossoms, fruits and seeds (*mūlā mūla-jīva-phudā* etc. Viy 300a) Acc to Sūy. this refers to the five classes mentioned above, acc. to Pannav. to the trees, acc. to Ṭhān 520b to the *tana*. The taking in of matter and its transubstantiation starts (Viy. 300a) with the souls of the roots which are near to the souls of the earth (*paḍi-baddha*) from whom they take what substance they need. From there it is taken by these of the bulb, from here by those of the stem, a. s. o. As to this theory concerning the growth of plants (the text of which suggests the wrong conclusion that the resp. former were decaying in favour of the resp. succeeding ones) it may be pointed out that this growth decreases in proportion to the sequence of the starting of the rainy season— the main rainy season²— autumn— winter— spring—, and summer. The opposing vital force which manifests itself in the general bloom is explained acc. to § 94-³ Now, the number of the souls in trees is either x, 2 or ∞ (Viy 364a, Ṭhān. 122b), the quantity of 2 pertaining to the roots, etc., whereas the first pertains to the blossoms (Pannav. 31a) and one to each leaf ∞ souls

are attributed (acc. to *Viy* 300 a) to a number of certain specified plants. The *uppala* and other plants are discussed by *Viy*. 508 b ff., while *Viy*. 800 a deals with useful plants for the most part. *Pannav.* gives many details especially of the *sāhāranā-sarīra*.

§107. *The Lower World (ahe-loga)*. In the lower world there are seven regions (*pudhāvī*, *Umāsvātī* gives *bhūmī*). Their names are *Rayanappabhā* (*imā R*, see § 113 footnote), *Sakkarappabhā*, *Vāluyappabhā*, *Pankappabhā*, *Dhūmappabhā*, *Tam(appabh)ā*, and *Tamatamā* or, commonly, *Ahesattamā* (*Mahātamahprabhā*)¹ This is their sequence from above to below. In between them there are spaces of unmeasured extension,² and a space of that kind separates also the lowest region from the non-world (*Viy*. 651 b). For each region is enveloped by hulls which, in succession, consist of viscous water, viscous wind³ and light wind. The last and most remote is followed by an intermediate space (*uvās'antara*), *Thān* 177a, 388b, comp. *Viy*. 152a and also *Thān*. 152b). Below each region these hulls are very wide: the water hull amounting to 20,000, the remaining to 2 joy; to their sides, where they are ring-shaped (*valaya*), they are quite thin measuring 6, $4\frac{1}{2}$ and $1\frac{1}{2}$ joy in the *Rayanappabhā*, increasing evenly up to 8 6 joy in the remaining regions and measuring 2 joy in the *Ahesattamā*. Beyond the light wind hull, at the sides, the world ends (*loy'anta*), thus the intermediate part of space lies below the regions only. The hulls of the uppermost region include the centre world and, partly, also the upper world (§ 129).

§108 The regions are determined in respect of their depth only, but not as to their width. Of the latter *Viy* 604 b (= *Jiv.* 306a) merely says that it increases downwards. The

¹ Other names for all seven regions are given by *Thān* 388b, acc. to which the *Bhāṣya* ref. to T 3, 1 in the edition (p. 90) must be partly rectified. *Thān* 440 also counts *Īṣipabbhārā* (§ 135) as *pudhāvī*.

² Any concussion of these hulls (*guvī samāne*) is conveyed by the water hull to the earth and causes a general earthquake (*Thān* 161b).

³ By entering a minute distance from above into the space below the *Rāy* (and naturally horizontally in the centre) we come to the centre of the world (*Viy* 606a) and, equally, to the centre of its three sections—§ 103—, that of the centre world called *Ruyaga* (§ 58).

depth decreases from 180,000 *joy*. in the Rayanappabhā down to 108,000 in the Ahesattamā which is the number of the places of hell it contains (*nīray'āvāsa*), 84 mill in all, and in the 1st to the 5th region from 3 mill. down to 300,000 Tamā has 99,995, Ahesattamā but 5, though especially extensive, places. While (Pannav. 79b) the layers of the 1st to the 6th region lie between every two unoccupied layers of 1,000 *joy*.—the upper one in the Rayanappabhā equals the thickness of Jambuddīva (§ 113)—, these layers in the 7th region amount the 52,500 *joy*, so that the occupied is but 3,000 *joy* in depth here. In the Rayanappabhā we have three special layers: Khara-kanda, Pankabahula-k and Āubahula-k of 16, 000, 84, 000 and 80,000 *joy*. These names indicate the transition to the water hull which follows accordingly. The former on its part has 16 layers of 1,000 *joy* each, the uppermost being called Rayana-k. (Thān. 525a, Samav. 89b f, 92b, 104b).

Another arrangement in layers—though not represented in the Canon itself—goes by the way of *patthada*.¹ In the 1st to the 7th region there are 13, 11, 9, 7, 5, 3 and 1 of such layers tiered one beneath the other, i e. 49 in all. From the central hell of Sīmantaga in the uppermost layer of the Rayanappabhā measuring 4,5 mill *joy* in diameter² a succession of 49 hells leads off in every main direction, and a succession of 48 hells in every intermediate direction. In the second layer the numbers are 48 and 47, etc, up to 49, which is identical with the 7th region where the medium one is surrounded by 4 only. More extensive hells at certain places in these successions are called something like “eccentric” (*avakkanta-mahānīraya*) (Thān 365b). So far as these hells appear in successions they are either circular or quadrangular, while in other cases they may be of any shape possible. In the lowest region four triangular hells, called Kāla, Mahākāla, Roruya,

1. Sthān 366 b *patthada* is *prastīta*, though it is rendered as *prastāṣa* exclusively. Abhayadeva here refers to the *Vimānānarakendrak'ākhya grantha*, presumably the Vimāna-and Naraya-Pavibhatti, comp. AGRM, 24, 1924.

2. Because it is as large as Samayakhetta (§ 122), the Uḍuvimāna in Sohamma (§ 129) and Isīpabhārā (§ 135) (Thān. 125a, 250b).

and Mahāruruya, with their vertex pointing outward form a frame round the 5th circular one, called Appaitthāna.¹ The latter measures 100,000 *joy* in diameter.² The different hells in the Rayanappabhā are 3,000 *joy* in depth, and they are something like egg-shaped. Within them it is dark³ except for a glow of fire,⁴ slippery with fat, pus, blood and filth, evil smelling as if of decay, and a touch causes pain. In the descriptions given by the Sūy. and Utt (except the reference of Utt. 19, 48) the hells are considered hot only; in the Jiv. their three uppermost regions are hot, whereas the two lowest are cold, in the 4th and 5th we have both in the extreme; heat prevails in the former, cold in the latter.

§109 The earlier conception—already mentioned above—still represents the beings occupying the hells as humans who, in these hells, partly at certain designated places, rivers and the Veyāliya mountain, suffer the most exquisite punishments by cruel warders (Sūy. 1 5; Utt. 19, 47 ff). Acc. to later conceptions the hells are populated by beings (*nerariya*)⁵ totally different from humans. They look black and ghastly, they resemble plucked birds, they are sexless, emanate a smell of decay and cause pain when being touched. They greatly vary in size, the maximum being in each region twice that of the preceding and reaching up to 1,000 *dhanu*. They suffer from hunger and thirst, heat and cold, and even though they themselves cause terror, they live in constant indescribable fear of mutual persecution in the most different shapes into

1 Less accurate are the earlier statements made by Sūy II 2, 66 f. = Dasā 6, 15 f — Pannav 79b, Jiv 102b, *te naṇṇa naragā anto vaṭṭā, lahiṇa cauraṇṣā, ahe khurappa-saṃṭhāna-saṃṭhiyā*. They must not be referred (as JACOBI does in Sūy) to the inside and outside of the various hells. Comp § 111.

2 This it shares with the Jambuddiva (§ 113), the Pālaga-jāna-vimāna in Sohamma and Savvatthasiddha (§ 129) (Thān 250 b) Comp. the *nālī* § 95.

3. For its motivation see Thān 263 a

4 *nicc'andhayāra-tamasā kākū* (or *kāuy'*, Sūy wrong *kanhā*) *agaṇi-vanṇ'ābhā*

5 Acc. to Viy 230b the world of hell is covered with hell-beings down to a depth of 400 to 500 *joy* (*samāinna*)

which they change ¹ All these torments increase in proportion to the increasing depth of the region to which they are doomed according to the measure of their wrong-doing (Viy. 596a, 604b, 606b). But also the animate elemental and plant-particles to be found in the different hells or either building them up, have much to suffer after they have been transferred there by their Karman (Jīv. 127b, Viy. 606a).

§110. However, the lower world is not only a place occupied by hell-beings, but its uppermost region, known as Rayanappabhā, is also the seat of gods, the Bhavanavāsī and the Vānamantara, though we shall see that both kinds are not confined to the lower world, but are at home to a great extent in the centre world, too. Of the Bhavanavāsī (or -vai; Pannav 84b) there are 10 different kinds. the Asura-, Nāga-, Suvanna-, Viiju-, Aggī-, Dīva-, Udaḥī-, Dīsā-, Vāu- and Thāṇiya-² kumāra. By the denomination they have in common they are characterized as youthful appearances with all exterior virtues, and in dogmatic passages they are described mainly as male, though elsewhere some of them are female³ according to their root-word. The size of these gods is 7 *rayana*, and they differ in colour; the Asurak. are black, the Nāga- and Udaḥīk. whitish (*paṇḍura*), the Suvanna-, Dīsā- and Thāṇiyak. golden, the Aggī-, Dīva and Viijuk. orange, and the Vāuk dark (*piyanguvanna*)⁴ These colours contain indications as to their activities and their seats, and so do, in parts, also their emblems (Uvav. 34= Pannav. 85a)⁵ and, above all, the offices assigned to them consequent on the *logapāla* (§) 132). The Asurak are mere gods of the lower world. But just as they may go down

¹ Viy 314 a=Thān 505a quotes 10 general painful sensations of the hell-beings

² JACOBI, Utt 6, 225 wrong Ghanika. The sequence above rendered by Viy and Pannav is the normal. In Dev it is 1 2 3 6 7 8. 9 10 4 5. For another different sequence see Umāsvāti on T 4, 11.

³ *kumāra* and -*rī* only Viy 3, 7, 4, 1-4. Exclusively *disākumārīo* Jambudd 383 ff, *disākumārī-* and *viijukumārī-mahattariyāo* Thān 198b, 222 b, 418b. The grammatical gender of *dis* and *vidyut* obviously excludes masculine princes

⁴ Partly different in Umāsvāti on T 4, 11.

⁵ Those of the Udaḥīk and Vāuk are exchanged by mistake in the text.

into the deep beyond the Rayanappabhā, they are able to reach both the centre- and the upper world.¹ The Nāgak. are water gods in general and as such are connected with the rain clouds² while the Uдахik. seem to command over the sea,³ to water must apply to the Uдахik, just as well. The Suvannak. having their seat also in the Mānuss'uttara mountains (§ 122)⁴ go back to the idea of the Suparna-Garuḍa,⁵ the Dīsāk. to that of the world elephants. The latter female dignitaries share in the consecration of a Tittthagara for the purpose of which they come running from the centre world as well, for these *dīsākumārī-mahattariyā*⁶ have their seats also on the Ruyaga mountains (§ 123) and in the tree tops of the Nandana forest (§ 115).⁷ The meaning of the *Divak.* with a lion as their attribute⁸ is not clear. The *Vāuk.* occupy submarine caves (§ 121), and they cause the movement of the wind bodies (Viy 212 a) which is either a normal or an abnormal one (*ahā-riyaṃ riyaṃ, uttara-kiriyaṃ r.*). Following the same passage (211b) the theory of the wind may be added here. There are winds of the 4 kinds or grades *isim-purevāya, paṭṭhāvāya, mandā-vāya, mahā-vāya*, and in the sections of the compass-card opposite each other winds of the same character are simultaneous, whereas winds blowing over continents (*dīvaccaya*, comp. Nāya 11) are not simultaneous with winds blowings over oceans (*sāmuddaga*), since the wind turns back on the sea-shore (*tesaṃ vāyānaṃ vivaccāsenāṃ Lavane samudde velaṃ nāikkamaṃ*).

1 For the motives see Viy 169b, 180b

2 Viy 278b, Jambudd 238 b f

3. *velaṃ dharanti* Divas 308a

4 Divas 342a

5 Hence it is wrong to render it by Suvannak in Prajn Comp Āyār II, 15 XII f and the comm on Samav 155b Their fight with the Nāgak. may be the cause for a partial earthquake (Thān 161 b).

6 See ALSDORF's instructive essay New Ind. Ant 9, 105-128. The author complains that his essay abounds in misprints

7. They therefore are called *aheloga-vatthavva* as well as *uddhaloga-v* (Jambudd V, (383ff, 388b) comp Thān 436 b and Sthān) since in this altitude the upper world has begun already

8 The lion of the so-called Dvīpakumāra may go back to the animal of the *dvīpa* kat' exochen, Sīmahādvīpa But the neighbourhood of *agga* and *vijju*, perhaps even the princely names of Punna and Vasīṭṭha (Avaśiṣṭa) are indicative of *dīpa* instead of *dvīpa*.

§111. With regard to both kinds of gods the Rayana-ppabhā region is horizontally divided into a southern and a northern half, being void, however, above and below in a layer measuring 1,000 *joy*. in depth both of hells and places pertaining to gods. These places (*bhavana*) are bright,¹ sumptuously furnished and pleasant in every respect. Those situated on the edge are circular, those situated inside are square shaped, the nethermost layer is merely circular (Jīv. 94b). the total number is 77.2 mill., the number of the individual kinds differs from 64 mill. with the Asurak. up to 96 mill. with the Vāukumāra²

Each of the two halves, of which all southern ones contain some more places than the northern ones, is governed by a prince. These pairs of princes in the above quoted sequence of the kinds are Camara and Balī Vairojana, Dharana and Bhūyānanda, Venudeva and Venudāli, Harikanta and Haris(s)aha, Aggisiha and Aggimānava, Punna and Vasittha, Jalakanta and Jalappaha, Amiyagai and Amiyavāhana, Velamba and Pabhanjana, Ghosa and Mahāghosa. It is but in the case of Camara and to a smaller degree of Balī that we come to know more than the mere names of these princes, while the remaining pairs stand back completely, and it is only by their surnames (Viy 200b) that we are, partly, informed of their origin. With regard to Camara and his Asurakumāras (and equally with Sakka, § 131) we can speak of something like a mythology (comp Viy. 169b ff, 319b, 752a, etc.) His residence—it is called Camaracancā as that of Balī bears the name of Balicancā—is described in Viy. 144a, 617a, though it is added that it does not serve him as a dwelling but simply as place of entertainment.

§112. The transition to the centre world is formed by the Vānamantara- (or Vantariya-) gods, for their seats are partly (Pannav 95a) subterranean (§ 110), partly in the groves (Jambudd. 31a) summarized in § 116—in the so-called

1 Viy 246 b

2 Viy 770a, where also the places of Vānamantara and Joisiya are mentioned

Long Veyaddha hills (Jambudd. 72a) (§ 114) and (Jīv. 145a) on the intermediate continents (§ 116). In the acknowledged sequence they range between humans and star gods who belong to the centre world. In them we find the dogmatic reflection of popular spirits, ghosts and demons,¹ and it is characteristic, that in the Canon nothing special is being said as to their activities and numbers ($2 \times 100,000$, Viy. 601a). There were two sequences of Vānamantara kinds known, though at least by Umāsvāti T. 4, 12 one of them got the preponderance over the other. It is (Thān 442b, Pannav. 95b) that of the Pisāya, Bhūya, Jakkha, Rakkhasa, Kinnara, Kimpurisa, Mahākāya (Thān, 161b 442b, Mahoraga), and Gandhavva with two princes each (Pannav 97b). The other sequence has the Anavanniya, Panavaniya, Isivāiya, Bhūyavāiya, Kandiya, Mahākanduya, Kohanda (Ku-) and Payaga, and here equally two names of princes² for each were invented (Pannav. 95b, comp also Thān. 85a). Umāsvāti mainly quotes these Vānamantara as sub-groups of the former sequence (differently classified by him). That at least the Anavanniya enjoyed popularity is clearly proved by Viy. 498a. As to T. 4, 12 we also find specifications regarding their outward appearance which, except for the Rakkhasa, is a pleasing one; the colour is mostly of a dark shade (*śyāma*). The dwellings (*bhomejjanagara*) are in the uppermost layer, the Rayanakanda, of the Kharakanda of Rayanappabhā, and, what is more, within the 800 *joy*. left both above and below after deducting 100 unoccupied *joy* on either side. The largest among these dwellings are as large as is the Jambuddīva, the medium ones as large as Videha (§ 113), and the smallest are *khetta-sama*. Within them the Vānamantara lead a happy life, free from care and ageless (Dev. 75 f.).

§113. *The Centre World (tirya-loka)*. The centre world rests on a disc the thickness of which we may say to be 0. For the 1,000 *joy*. beneath the surface into which the mountains

1. Thus also Thān 141b quotes the *deva*, *nāga*, *jakkha*, and *bhūya* as either sending or refusing rains

2. Dev. 72 has none but these, quoted by Pannav. 98a.

penetrate (usually with the *uvveha*, a fifth quarter of their visible elevation¹) are identical with the 1,000 *joy* which, in the Rayanappabhā, are void of places pertaining to either gods or hells. The surface of the centre world consists of the circular continent of Jambuddīva surrounded by other continents and by oceans in concentric rings². We shall deal but with the former first.

The diameter of the Jambuddīva³ measures 100,000 *joy*. Its centre point and therewith that of the whole centre world, is the Mandara mountain (s b.). To the south of it—from S. to N.—we have the different parts of the world (*vāsa*, *varisa*, *vassa*)⁴ called Bharaha, Hemavaya, Harivāsa, and to the north—from N. to S.—those of Eravaya (Erāv.), Hirannavaya (also Her., Er.),⁵ Rammaga, They, however, do not occupy the entire disc. In its centre there lies the continent called Mahāvideha or Videha. It divides into Puvva-Videha east and Avara-Videha west of Mandara, whilst to the south and to the north of it we have the countries of Devakurā and Uttarakurā⁶ (-*kuravah*). In the latter we behold the world tree of Jambū from which the whole continent derives its name. It measures 8 *joy*. both in thickness and height, and it is the seat of the god Anādhiya. In Devakura the tree Kūdasāmalī inhabited by the Venudeva Garula corresponds to it.

These seven parts of the world are separated from each other by world mountains (*vāsadhara-pavvaya*) extending from east to west, so that in the south between Bharaha and

1 This is shown by the distances measured in *joy*, and the astronomical distances (comp Jiv 376 ff) counting from a *bahusama-ramanīya bhūmi-bhāga* in Rayanappabhā. Hence the reason why it is merely called by the name of *mā Ray*.

2. We shall see (§ 123) that their number is limited, though by the term of *asaṃkhejjāṃ diva-samuddāṃ* we might suppose the reverse. Also Umāsvāti on T 3, 7 calls them countless, yet at the end of his Jambudvīpasamāsa he gives a specified list.

3. For a plan not true to scale see Antag ed BARNETT, p 138.

4. Umāsvāti T 3, 10, *vaṃśa*, *varṣa* *vāśā itī c'aśāṃ gumataḥ paryāyanāmāni bhavanti*, *vaṃśadhara* on T 12. In the Prakrit of the Dig. we read *vaṃsa*.

5. *Viy*, Thān and Samav write Eravaya and (H)Erannavaya, Jambudd. has Erav. and Hir., also Nelavanta except in Jambudd V Comp. § 119.

6. Pl. -*kuram* corresponding to *Bharahām* etc. *Viy* 791b.

Hemavaya we have Cullahimavanta (Himavan), between Hemavaya and Harivāsa Mahāhimavanta, between Harivāsa and Mahāvideha Nisadha; in the north between Eravaya and Hirannavaya. Sihari, between Hirannavaya and Rammaga: Ruppi, and between Rammaga and Mahāvideha Nilavanta.

As to the ratio of size of these continents and world mountains, it is of a kind that towards the centre each of the succeeding is twice as wide as the preceding. The width (*vikkhambha*) of Bharaha and Eravaya measures $526 \frac{6}{19}$ *joy*.—i.e. two quite narrow segments—, that of Cullahimavanta and Sihari $1,052 \frac{2}{9}$ *joy*, etc. By taking Bharaha as 1 we may imagine the Jambuddīva as consisting of 190 units (*khandā*). From the width there follows the length of the chords (*jīvā*) representing the boundaries of the continents and world mountains, of the pertinent arcs (*dhanuṣatṭha*), and of the arc sections between the chords (*bāhā*). The northern edge of the Cullahimavanta, for instance, is a little longer than $24,932 \frac{1}{8}$ *joy*., and the arc above it embracing both the mountains themselves and Bharaha measures $25,230 \frac{4}{9}$ *joy*.

§114. The world mountains—JACOBI calls them by the appropriate term of “banks” (on T. 3, 11)—have 100, 200 and 400 *joy*. in height measured in pairs towards Mahāvideha, and they show 11, 8 and 9 summits (*kūḍa*)¹ These summits rising to an individual height of 500 *joy*. sit upon the mountains. In the centre of these mountains we find the longish lakes (*maha-ddaha*) from which the large rivers spring (Ṭhān. 72b). From those of the Cullahimavanta and Sihari there flow three each, i.e. into Bharaha eastward the Gangā, westward the Sindhu, northward into Hemavaya the Rohiyamsā; into Eravaya eastward the Rattā, westward the Rattāvai, southward into Hirannavaya the Suvannakūlā. From the remaining lakes spring two rivers each to flow southward and northward. Thus from the Mahāhimavanta there come the Rohiya in Hirannavaya and the Harikantā in Harivāsa from the Nisaha ibd. the Harī and the Sīoyā in Mahāvideha. They

1. Ṭhāṇ 70 a ff counts 2 each

correspond to the Ruppakūlā in Hirannavaya flowing northward and the Narakantā in Rammaga flowing southward from the Ruppi, as do the Nārikantā and the Sīyā in Mahāvideha flowing from the Nilavanta ibd. These rivers start by flowing on top of the mountains in the above mentioned directions to leave it in a leap (called *jubbhiyā* for its tongue-like shape). At their foot they cross a lake (*pavāya-kundā*, *p.-daha* or *salila-kundā*) and turn off into their definite direction before the uplands (soon to be mentioned) in order to fall into the Lavana Sea either to the east or to the west. Those mountains lying in this course are crossed by flowing beneath them. The medium continents are divided by the rivers into two equal halves. All rivers of the continents that start by flowing to the south end up in the east, all others end up in the west. A chord standing perpendicularly on them and its ends coinciding with those of the Nisaha and Nilavanta forms the boundary of an arc 2,923 *joy* wide which is filled by the "estuary forest" of these rivers (*muha-vana*).

Each of the two rivers in Bharaha and Eravaya has 5 tributaries (*antara-naī*, Thān. 351a, 477b). Those of the Gangā are called Jamunā, Sarayū, Ādī, Kosiyā and Mahī, those of the Sindhū Sayadū, Vivacchā, Vibhāsā, Erāvai and Candabhāgi. Both the Sīyā and the Sioyā have three tributaries each of which springs from lakes on the slopes of the southern and northern world mountains.

The mountains of the different continents, with the exception of Mahāvideha, are known by the name of Veyaddha, (T. 3,11 Vaitādhya, Jambūdv. Vijayādhya or Vijayārdha; comp. end of § 115).¹ The Veyaddha mountains which divide Bharaha lengthwise into equal parts are exemplary. They measure 25 *joy* in height and 50 *joy* in width, and they culminate in 9 summits. These mountains to which, naturally, there are corresponding ones in Eravaya, are called long (*dīha-V.*), whereas the other Veyaddhas (bearing special names), are called round (*vatta-V.*). The latter are situated in the four

1. For the etymology (*vedyardhai*) see ALSDORF ZDMG 92, 485f.

remaining continents on the S -N Middle axis and are hemispherical in shape with 1,000 *joy* in diameter and height Other characteristics of Bharaha and Eravaya are (a.o) the Usabhakūda on the slope of the Cullahimavanta or, resp., the Sihari between the two rivers

§115. The mountains in Mahāvīdeha are called *vak-khāra-pavvaya* They are grouped round the Mandara mountain which forms the centre point of the Jambuddvīa. This mountain which, apart from 14 other names (Samav 31b),¹ bears the name of Meru—preferred by later authors—reaches below the earth surface by 1,000 *joy*. and rises above it by 99,000; at its visible foot it measures 10,000 and on its top 1,000 *joy*. in diameter On its slopes we have four forest districts (*vana*) On the earth surface there is the Bhaddasāla forest extending over a distance of 22,000 *joy*. from east to west, but of not more than 250 *joy*. from south to north, with eight directive summits (*disāhatthi-kūḍa*) rising from it up to a height of 500 *joy* (Thān 436a). On the side of Mt. Mandara, at a height of 500 *joy*. we have the flat terrace of the Nandana forest, and at a height of 62,500 *joy*. that of the Somanasa forest, both measuring 500 *joy*. in width The former has nine summits (Thān. 454a) At a height of 36,000 *joy* ² above the latter there follows the Pandaga forest with four sacred places (*abhi-sega-silā*) for world-emperors (*cakkavatti*) (s b) and Tittthagaras (Thān 224a) From its ring 494 *joy* broad the head-piece (*cūhiyā*) on the top level of the mountain measuring 12 *joy*. in diameter juts up It is 40 *joy*. high and 4 *joy*. wide at its top From the Mandara four mountain ranges stretch in the intermediate directions to the Nisaha and Nilavanta, their height decreasing on their course from 500 down to 400 *joy*, whilst their width increases from a minimum up to 500 *joy*. They embrace the countries of Devakurā in the south

¹ Jambudd has but 12 in all, whereas Sūrap 5 and 7 has 20 The Meru is described by the name of Sudamsana in Sūy I, 6, 10 to 13 Comp. also Dasav 11, 16

² The figures (500+62,500=) 63,000 and 36,000 acc. to Jambudd. Samav 75a gives 61,000 and 38,000 for these parts (*kaṇḍa*)

and of Uttarakurā in the north. Either country has five lakes with 20 mountains of gold each, i.e. 200 mountains of gold (*kancānaga-pavvaya*) in all, in Devakurā we have, furthermore, the mountains of Citta- and Vicittakūda corresponding to the two twin mountains (*Jamaga-p.*) in Uttarakura. In their western, resp., eastern part we have the world trees referred to above. Moreover, there are four times 4 parallel mountain chains,¹ stretching from the world mountains by which Mahāvīdeha is bounded, they hit the two rivers at right angles, and it is here that they have their maximum height in correspondence with the case mentioned before. Between every two of them there flow the 12 tributaries quoted above following their course. As in all other world continents, the mountains consist of one kind of noble metal each or either of precious stones. Merely the nethermost 1,000 *joy.* of the Mandara, hidden in the earth, consist of common rock.

The mountains and rivers, as well as the estuary forests of the Sīyā and Sīoyā form, in equal distances, the boundaries of the empires (*cakkavatti-vijaya*) under the rulership of a world-emperor (*cakkavatti*). By including Bharaha and Eravaya there are 34 of them in all (Thān. 435 b). The empire of Bharaha with its Veyaddha,² with its Gangā and Sindhū and other geographical details is merely copied by the remaining ones, and so are these names. There we also find a great number of cities with an imperial residence in each case, and countless villages.

§116. At the point where the mountains of Cullahimavanta and Sihari touch the edge of the Jambuddīva, we find four intermediate continents (*antara-dīva*) protruding into the sea in the four intermediate directions for a distance of 300 *joy.* and six more following each in the same directions always for a distance of 100 *joy.* So that, then, each of the mountains ends up in 14 promontories, whilst their total number is 56.

1 They are listed with the other *vakkhāra-pavvaya* in Thān. 224a, 326a.

2 Since they halve the empire, Umāsvāti's Jambūdvīpasamāsa (Appendix to Tattvārthādhigama Bibl. Ind. 1905), also gives Vijayārdha owing to a wrong etymology (see end of §114).

In rendering a description of the geography of the Jambuddīva we have confined ourselves to dealing with its major points only, and we shall continue to do so in dealing with the rings surrounding the J. In this connexion it may suffice to mention summarily that, just as is the case with the J. itself, "all hills, hill tops, summits, lakes, forests, estuary forests, spring ponds, sacred places, water courses, etc." are surrounded by an enclosure (*pauma-vara-veṇṇā*) and a grove (*vaṇa-khaṇḍa*). The respective descriptions follow a certain conventional pattern. Here we also but mention the palaces, gates, lotus ponds, sanctuaries and residences of gods on mountains and in islands.²

§117. Though the dwelling place of man is not confined to the Jambuddīva but extends beyond it also to the continent of Dhāyāikhanda and the inner half of Pukkhavarā (§ 122), we may yet discuss it already here. The quasi political classification of men is done according to their dwelling quarters, i.e. to the *kamma-bhūmi*, *akamma-bhūmi* and *antara-dīpa*. Karmen places of a kind, where the Karman is acquired and annihilated, are found on the 2½ continents in the world parts of Bharaha, Eravaya and Mahāvīdeha, except the two Kurā; the latter, the remaining world parts and the intermediate continents are free from Karman (Viy 791 b). At the Karman places there live (*kamma-bhūmiga*) Aryans and Barbarians. Among the different classifications of the former (Umāsv. on T. 3, 15, comp. Thān 358a) the *khett'āriya* range first. We are given 26 towns in 25½ countries as native places of Jinas, *cakkavattī*, *baladeva* and *vāsudeva* in that one section (*Īkaya*) is considered non-aryan. With the *bhāsāriya* the Ardhamāgadhī and the "holy script" (*bambhī livī*) serve as a criterion,³ the latter being distinguished into 18 provincial and technical scripts. The Barbarians (*mīlakku*, also *meccha*) greatly vary in kind, Pannav has more than 50 names of different peoples.

¹ Umāsvāti, Jambūdv 4

² For examples concerning their description see LEUMANN, VI OC III, 2, p. 495 ff

³ Umāsvāti, being a Sanskrit author, expresses himself in general terms only

Unfortunately these names as well as the others are given next to no support by the commentary. We but mention the Saga, Javana, Cīlāya, Pārasa, Hūna, and Romaga. The list of the royal household which, next to some curiosities, includes even ladies of foreign nationalities, is much shorter (Viy 457a, 557a, Nāyādh § 117; Pannav. 14a; Uvav. § 55). About the places void of Karman and their people we are told next to nothing (§ 119). The inhabitants of these intermediate continents (*antara-dīvaga*) are strangely shaped: they are one-legged, they do not speak, they have tails and horns, the ears and mouths of horses, elephants, cattle, etc., radiant teeth, etc. etc. Their 28 different kinds on the southern continents—each bearing one—repeat themselves on the northern. Their cultural state is that of paradise. They are vegetarians and eat but every second day. They live in trees and know of no communal life. Their character is the best one can think of. They have neither masters nor servants, neither parents nor children, neither enemies nor friends, no harmful animals and nothing evil from whatever side. Their outward appearance (they are 800 *dhanu* tall) is of every possible excellence, and as to the mentioned abnormities, they apparently do not stand in its way.¹ The beauty of their wives is most extraordinary.

The mountain-banks as well as the different mountain ranges and hills are considered not to be inhabited by humans, and to get there or to the oceans of Lavana and Kāloya (§ 122) they can only do so by transposing themselves (Umāsv. on T. 3, 12).

§118 All over the centre world we find the animals of any shape. The one-sensed kinds have been mentioned above already, since the smallest particles of earth, water, fire, wind and plants occur in all parts of the world, no matter whether they are solid or subtle. The two-sensed kinds which are

1 The description in Jīv 350a ff. equals on the whole that of Mahāvīra's Uvav 16, but since it concerns beings of common standing, it goes in the opposite direction, i e from below to above (just so Āyār. 2, 23 ff). In either case the procedure is contrary to Brahman usage.

capable of sensing and tasting, the three-sensed which, in addition, are capable of scenting, the four-sensed which are gifted with seeing, and the five-sensed which are even able to hear, all these kinds vary greatly, Pannav. 41 a ff without having the intention of being exhaustive, counts up to 40 species¹ The informations given in Utt. 36² are less complete. And yet the classification is crude. Worms appear side by side with shells, many lower insects as having three senses, and bees, scorpions, crickets, flies, etc as having four. The highest class is formed by the higher animals, though, strangely enough, we are but insufficiently informed concerning their habitats (Pannav. 78 b f), for merely to say that all two-sensed animals live about water places of the most different kinds, is but relatively true, and yet this statement is repeated for all three- to five-sensed animals, for the latter even twice (Pannav 84a) The habitats equally serve for the classification of the higher animals, though only secondarily, for their being called water-, earth- and air- animals, or, more precisely, such that move in the corresponding element (*jalayara*, *thalay.*, *khahay*, Sūy II 3, 22 ff; Utt 36, 171 ff, Pannav. 43 b ff) goes back to the fundamental discrimination between voluntarily movable and immovable beings, the *tasa* and *thāvara pāna*³—the latter comprising the earth- and water- beings and the plants⁴ (a o Thān 134a) The medium or the way of locomotion further leads to speak of the land animals as solid- and multi-

1 Many animals are quoted in a more than one context Pannav 7b f

2 The two- to four-sensed do not occur as *suhuma* Hence the translation of Utt 36, 128, 137, 146 SBE 45, 219 f has to be rectified

3 The *tasa pāna* are divided (Āyār 5, 1 f (=Dasav. 4, 1 intr) acc to their physical creation into such coming out of eggs, being born ready made, being brought forth with the amnion, into such coming into existence in moisture, in sweat or by coagulation, and others that spring from the womb of the earth or from the nil We have dealt with the sixth case in § 63 already It is mentioned by Thān 114a where it is claimed that the first and second case (*andaya* and *poṇāya*) pertain to fishes, birds and the afore quoted crawlers For an attempt made by KOHL (ZDMG 103, p 151-155) to explain *poṇāya* by "born in a boat" see above, p 142

4 It is improbable that the five *thāvara-lāya* called *inda*, *bambha*, *sippa*, *sammai* and *pājāvacca* together with their consonant *ahiva* (Thān 292 a) have anything to do with it, even though Sthān insists on it In the Dig 2, 13 f. also fire and wind are *sthāvara*

hoofed, as equipped with claws, and as such crawling either breast- or armwise (*ura-* and *bhuya-parisappa*). In Sūy. II 3 we are systematically informed of the first and the later food taken by these creatures as well as by men and lower animals down to the elemental beings and plants.

§119. The conception of the circular shaped Jambuddīva is obviously due to that of the segment Bharaha as which the Indian peninsula seemed to show. We may further assume that the conception of the intermediate continents goes back to an ancient knowledge of Indo-China and the Malacca peninsula which was symmetrically enlarged later on. *Bharaha* (or *Bhāraha vāsa*) is called after the king bearing this name and whose capital Vmīyā lay in the centre of the country to the south of the Veyaddha. He gained the rule over the entire continent, as we are told by Jambudd. III, and thus became *cāuranta-cakkavattī*. Of *Eravaya* we hear nothing except the precise repetition of this legend where, naturally, the king is given the name of *Eravaya*. In *Mahāvīdeha* we find the happy conditions prevailing in the *susama-susamā* period (s. b). In the following pairs of Karman-free continents the conditions are of the *susama-dūsamā* or, resp., the *susamā* kind. The names of *Hemavaya* and *Hirannavaya* have been explained by the rich occurrence of gold, and this certainly goes back to the gold found in Tibet. As to the form of the latter *Erannavaya* it is, of course, of a secondary character.¹ In *Harivāsa* the people are of a yellowish or reddish colour (*arun'ābha arun'obhāsa*), by which it is intended to define the name. *Rammaga* needs no explanation regarding its name.

§120. The periods we have just come to mention have been connected with the ever turning time-wheel in a rather clumsy way.² The most happy period of *susama-susamā* (Jambudd. 97a; Vīy. 276a) is followed by the *susamā*.³ Both and two thirds of the succeeding, the *susama-dūsamā* are essentially

1. For its occurrence in later texts comp LEUMANN, Übersicht 44a

2. Comp F O SCHRADER, Philosophie p. 60 ff

3. The following after Jambudd II.

equal, their conditions correspond with those of the inhabitants of the intermediate continents, and they differ but in certain physical qualities of the human being and the regions, where they are reincarnated. Their want of food, for instance, manifests itself in the three periods after four, three and two days¹ In the last third of the *susama-dūsamā* the change for the worse makes itself felt, it increases in the *dūsama-susamā* and *dūsamā* to reach its climax in the *dūsama-dūsamā*. The birth of Mahāvīra fell in the end of the *dūsama-susamā*,² 75 years and 8½ months later the *dūsamā* came on. Towards its end it brings the corruption of all religious and social order (comp. Thān 398a),³ and with the *dūsamā* the order of the Jains, too, ceases to exist. With their names changing, her last representatives are with the Śvet the monk Duppasahṛ, the nun Vinhusirī (Phaggusirī) and the lay-couple of Jinadatta (Nāila) and Phaggusirī (Saccasirī).⁴ In the *dūsama-dūsamā* (Jambudd. 164a, Viy. 305a) all disaster aggravates beyond all bounds, the moons radiate detrimental cold, the suns scorching heat, and evil comes raining from the clouds. The earth is red-hot and impassable so that people have to hide in caves which they dare not leave but at sunrise and sun-set in order to feed on the water animals jiggering on the dry banks of the retreated rivers. These six periods or spikes (*samā*, Thān. 120a, 357a) are unequal in length. They measure 4, 3, 2 times 10^{14} *sāgarovama* (1 s. = 8,400, 000¹⁹), 10^{14} minus 42,000 and two times 21,000 years⁵ They form an *osappinī*, i.e. the descending half of the timewheel. Then they are followed⁶—again beginning with a *dūsama-dūsamā*—by the ascending half, the *ussappinī*, with the same

1. They are *aṭṭhama*-, *chaṭṭha*- and *cauttha-bhatta*, comp § 156

2. Āyār II, 15, 2=Jinac 2.

3. The signs by which to recognize the approach of the *dūsamā* are (Thān 398a) untimely rainfall, tribute paid to discreditable persons, ineffectiveness of instruction, and bad thinking and doing

4. The AUTHOR, Mahānis p 18, 42 (here also quotations) The Damsanasāra of the Dig Devasena calls (48) Virangaja as the last one having the name of *jai*

5. Comp also Viy 274b

6. For the reverse sequence in later literature comp LEUMANN, Übersicht p 43 b.

periods. By calling them both *samā*, Thān. 47b may well have thought of the adj. *sama*.

After the *dūsama-dūsamā* has come to its end, the cloud of Pukkhala-samvattaga¹ appears in the *dūsamā*. It is as big and thick as is Bharaha, and in a tempest lasting for seven days it extinguishes the fire. Now for the same time rains fall from the cloud of Khīrameha thus producing colours, smells, etc. potentially. With the Ghayameha there comes fertile humidity (*sineha-bhāva*), the Amayameha causes plants to grow, and the Naramsameha gives them flavour. Now all people come to light again and greet the reborn earth. Then the remaining periods up to the *susama-susamā* follow. This sequence pertains to Bharaha and Eravaya only, whereas in the other continents the conditions mentioned last for ever. Chronology is unknown there (Vīy 791b).

§121. The Jambuddīva is surrounded on all sides by an enclosure (*jagāi*) with numerous window-like openings. It measures 8 *joy*. in height and its width decreases from 12 to 4 *joy*. From the centre of its surface a pinnacle (*veya*) stands up $\frac{1}{2}$ *joy* high and 500 *dhanu* wide, and a grove (*vana-saṇḍa*) extends in front of it. All measurements are made by starting from the outermost edge of this pinnacle. In the four main directions the enclosure is breached by a gate which, again, is 8 *joy* high and 4 *joy*. wide. The rivers Sīyā and Sīoyā fall into the eastern and western gates, since they form the entrances leading to the Lavana sea. There are three other entrances of such a kind to the east, south and west of Bharaha and Eravaya. They are the *tuttha* we find in the legend of Bharaha (Jambudd III).

The Lavana sea has a width of 200,000 *joy*. Its maximum depth is 1,000 *joy*. with a mean strip of 10,000 *joy* down to

1 Also Vīy 232 b In another context this word stands for a generic name, where (Thān 270b) the rain-power of clouds is being described. A single rainfall from the *puḷḷh* lasts for 100,000 years, from the *paṇṇa* for 1,000, from the *jīmūla* for 10, while many showers from the *jimha* do not mean a real rain for certain.

2 Thus the comm. acc. to the text the *jagāi* is enclosed by a *jāla kadaga*. The following *veyā* we mentioned in § 116 already-.

which the bottom descends - evenly, the enclosure being left out of consideration. This slanted bottom is called by the name of *go-tittha*. Nor is the water-level a plane surface, since—owing to an optical illusion—it ascends from the shore up to 700 *joy*. to where the maximum depth begins, above which, however, it rises up to 16,000 *joy*. This section above the deepest channel is the *sihā*. Ebb and flow, which occur twice within 30 *muhutta*, here cause a difference of $\frac{1}{2}$ *joy* as compared with the mean sea-level. This is due to the existence of submarine caves (*pāyāla*) which equally account for the spring-tides on the 8th and 14th and at new moon and full moon. For in the main directions of the compass card, 95,000 *joy*. distant, there are four vast spaces below the sea. They are 100,000 *joy* deep with a width of 10,000 above and below and 100,000 *joy*. in between, so that they nearly have the shape of hollow spheres with walls of diamonds 100 *joy* thick. It is in them that the Vāukunāras Kāla, Mahākāla, Velamba and Pabhanjana reside, the latter two of which we have mentioned already as princes of this species of gods. Apart from these four large caves we have 7,880 smaller ones with a diameter of 100 *joy*. above and below, and 1,000 in between. The contents of all caves gradually changes from below to above from wind into water. Heavy winds blowing out of them cause the spring-tides, while their being emptied of, resp., filled with water account for ebb and flow.

The god of the Lavana sea is called Sutthiya, and he lives in an island, Goyamadīva, 12,000 *joy*. distant from the Jambuddīva to the west. Equally distant to the east (§ 128) we find the two islands of the moons of the Jambuddīva, Candadīva, and opposite to them—though the island of the Sutthiya is said to lie there already—those of the suns, Sūradīva. The four moons (s. b.) of the Lavana sea have two islands lying 12,000 *joy*. off its easternmost point, and two others equidistant from the Jambuddīva to the east; this in correspondence with the four suns in the west. All these islands have a surface slanting from a height of 90 *joy* in the east to $\frac{1}{2}$ *joy* in the west. The position of the moon- and sun-islands of the remaining

continents and seas is the same, though they are level. At a range of 42,000 *joy*. from Jambuddīva in the main directions there are, in the Lavana sea, the hills (*āvāsa-pavvaya*) of the Velamdharma-Nāga prince, and in the intermediate directions at the same range those of the Anuvelamdharma. They are 1,000 *joy* wide and 1,721 *joy* high. Like all other continents and seas, so the Lavana is also enclosed by a *veryā* with four gates bearing the same names as that of the Jambuddīva. But no other sea is inhabited, nor has it any up and down as to its surface or any cloud formation (Jiv. 320b). Now, that the Lavana remains within its bounds without flooding all and everything, this is due to the sacred and benevolent human and superhuman inhabitants of Jambuddīva, "and, moreover, it is a world-law" (*ad-uttaram ca naṃ loga-tthū logāṇubhāve*, Jiv 324a).

§122. Just as the Lavana sea is twice the width of the Jambuddīva, so the ring-shaped adjoining continents (*dīva*) and the oceans (*samudda, oya*) lying in between are twice the width of the preceding. The continent beyond the Lavana is Dhāyāikhanda.¹ Two mountain ranges in the north and the south, bearing the name of Usuyāra (Isvākāra), divide it into an eastern and a western half, and within each we find a perfect copy of the geographical conditions prevailing in the Jambuddīva even including the names and with the only exception that here the world trees standing for the Jambū tree are called Dhāyāirukkha and Mahādhāyāirukkha. The world mountains run in a radial course towards the Mandara of the Jambuddīva, and the two Mandaras naturally lie strictly to the east and the west of it. Instead of 100,000 they measure but 85,000 *joy* in total height and but 9,400 *joy* in width at their foot (Samav. 92a, Sthān. 167b, Umāsvāti on 3, 11). Beyond the Dhāyāikhanda there follows the Kāloya² sea with black and thick water, and behind it the continent of Pukkharavara. Its two halves with the Paumarukkha and Mahāpaumarukkha in the place of the Jambū, are an interior and an

1. Jiv °saṇḍa

2. Jiv frequently has Kāloyana

exterior one, i.e. each of them is ring-shaped measuring 800,000 *joy* in width each. The interior one—that much is clear—repeats the design of the Dhāyaikanda. Behind it and to separate it from the outer ring there rise the Mānussuttara mountains with one summit in every main direction measuring 1,721 *joy* in height and 1,022 *joy* in diameter at their foot. They form the boundary of the world inhabited by men, the Samayakhetta or Manussakhetta, beyond which men as such are not able to reach. Where it terminates, all human institutions which include chronology (*samaya*) come to an end, and so do the atmospheric phenomena of lightning, thunder and rain; fire, metals in the earth, lakes, darkness and other astronomic occurrences do no longer show (§ 128)

§123 Scarcely anything characteristic is being said about the continents and oceans beyond the Pukkharoya. First there follow the continents of Vārunavara (Umāsvāti · Var.) Khīravara, Ghayavara, Khoyavara (Iksuvāra) with their seas of Vārunoya (Var.), etc.¹ Beyond the Khooya (Iksuvaroda) there lies the Nandissaravara-dīva. At every cardinal point we have an Anjanaga mountain measuring 84,000 *joy*. in height, 1,000 *joy* in depth and 10,000 *joy* in diameter at the foot decreasing down to 1,000 *joy* at the top. Its surroundings include a Dahimūha hill of circular shape. In the intermediate directions this continent has four Raikara hills 1,000 *joy* high, 1,00 *gāyā* deep and 10,000 *joy*. in diameter. The continents following on the Nandissaroya nominally belong together in threes each. For to the dīva Aruna, Arunavara and Arunavarohāsa there correspond three Kundala, Ruyaga, Hara, Addhahāra, Kanaga, Rayanāvalī, Muttāvalī, Āna and Sūra at a time, and it goes without saying that each of them has a sea: Arunoya, Arunavaroya, Arunavarohāsoya, etc.² On the Kundalavara

1. Of the seas hitherto quoted Kalōya and Pukkharōya taste of pure water (*udaga-rasa*), and so does the outermost sea to be mentioned. The Lavana sea, Varunoya, Khīroya and Ghaoya are *palleya-rasa* (*samudrāntarāṣṭha sahasādhārāna-rasah*). The remaining are *khaya-rasa* (Div. 371 b)

2. Thus after Div., where Addhahāra to Āna are quoted only in the comm. as the insertion for a *jāva*. Umāsvāti on T. 3, 7 has Nandīśvara (vara) and the Nandīśvaravarōda followed by the Arunavara and its sea. and presently, by 8 continents and seas up to the Svayambhūramāṇa. But at

and Ruyaga there are the circular mountains all bearing the same name (*mandaliya pavvaya*, Thān. 166b) following the pattern of the Mānussuttara. They are 42,000 and 84,000 *joy*. high and 100 *joy* deep and their diameter decreases from 10,000 down to 1,000 *joy*.¹ The Ruyagavara has 4×8 summits.⁴ The last five continents are simple again. Their names are Deva, Nāga, Jakkha, and Sayambhūramana and they are washed by seas called by their names.

§124. Of the gods belonging to the centre world it is only the stars that are quoted in the acknowledged quaternary number, though, apart from them, we have numerous local deities. The superior gods in the Jambuddīva and the Lavana sea haven been mentioned already. Even individual places of the Jambuddīva have a god of their own bearing their name and for us mostly leading a wholly vague existence. With a few exceptions only he appears as the second answer to the question as to why a country, a hill, etc., bears his name, in that this name, e.g. of the Mandara, is referred to as transmitted from that of the god to the resp. locality. The lakes from which the great rivers spring belong to the goddesses named Sirī, Lacchī, Hirī, Buddhī, Dhiī, Kittī. The reservoirs at the foot of the mountains have islands inhabited by the deities of these rivers the names of which they bear. Apart from these and many other individual deities we have different kinds of localized gods. On the Long Veyaddhas in Bharaha and Eravaya measuring 25 *joy*. in height—as well as in their copies

the end of his Jambudvīpasamāsa he is in conformity with Anuog goa by quoting after the Arunābhāsa (sic Anuog) Arunavara Kundala, Rucaka, Aruna (Anuog. correctly Ābharana), Vastra, Gandha, Utpala, Tilaka, Prthivī, Nidhāna (Nihī), Ratna, Varsadhara, Hrada, Nadi, Vijaya, Vaksāra, kalpa, Indra, Pura (Kuru), Mandara, Āvāsa, Kūṭa, Nakṣatra, Candra, three Sūrya, etc. as above. The separation of these names is not quite certain. To each of these continents there pertains a sea of the same name. The comm. on Anuog. discusses some more deviations from the Cunnī

3 The Div contain nothing as to these mountains. The statements made above follow Thān and Samav. In the verses rendered by Sthān. 167a the diameters differ, thus 1,022 to 424 with the Kuṇḍalavara, 1022 to 4,024 with the Ruyagavara. Sthān 480b notes these deviations. Ibid partly even other continents are quoted, so that Kuṇḍalavara is the 11th and Ruyaga (sic) the 13th

4. Thān 436b

in Mahāvīdeha—we find (Jambudd. 71b) at an altitude of 10 *joy*. both to the south and the north a so-called *vyjāhara-sedhi*, i.e. a line of seats (*nagar'āvāsa*) numbering 50 in the south and 60 in the north reserved for this human species gifted with magic power (§ 181). 10 *joy*. above there are two equal lines for the *ābhug(iy)a deva*, and another 5 *joy*. higher, on the top level, there follow the residential quarters of many Vānamantara gods. Equally located on the Long Veyaddhas as well as on the Citta- and Vicitta-Kuda, the two twin hills, and on all 200 mountains of gold in Devakurā and Uttarakurā we have the seats of the Jambhaga gods (Viy. 653b) who devote themselves to pleasure, play and lust. Their contentedness grants glory, their anger infamy. So it is they who, equally as servants of the Vesamana,¹ greatly add to the riches in Mahāvīra's parental home.

§125. Among the acknowledged gods those of the stars (*joisiya deva*) are considered to belong to the centre world. The star gods are (acc. to Tḥān 302a) the moons, the suns, the planets, the Naksatras and all fixed stars (*tārā-gana*). Cand-(im)a and Sūr(iy)a are considered their princes. All these gods, however, scarcely show any personal traits.

Acc. to Sūrap. 285b there were people² who supposed the moon and the sun to be incarnated souls or either both dead and soulless, as solid or hollow, as morally (by *utthāna*, *kamma*, etc.) or materially (by lightning or thunder) effective or ineffective. In the face of these assumptions, however, it is more correct to say that, in fact, they are powerful and magnificent gods, individuals that take an active part in the up and down of the sequence of existences (comp. Sūrap. 17).³ Their names of Sasi and Āicca are defined (Viy. 577b=Sūrap 291a) as

¹ *Vesamana-pkumḍadharā* Jin 89 98 (*kunda* in the comm = *āyattatā*, *ḍjñā*) Preferably *Ves-kundāladhara* Āyār II, 15 IV, though apparently this is said of the Logantiya-gods (§ 134), in the Jinac they go by the name of *tīrya jambhaga*

² Rational definitions as the following are by no means sporadic among the *paḍivallī* of the Sūrap

³ When their life has come to an end, they are replaced by 4 or 5 gods of the next lower rank until their likes will incarnate (Jiv 346b)

saśrī and *āditya*: “making the begin” (of chronology). With Rāhu it is similar (Sūrap. 286b). Some take him for a black mass (*ḥoggala*) of which kind there are said to be 15 and all after the moon and the sun, while others take him for an ordinary god who either seizes or releases them below (*buddh'-antenaṃ*) or at their head *muddh'ant*. with his right or his left arm. But Rāhu is (Viy 474a=Sūrap 287a) also a powerful god with 10 names and with palaces of five colours; by penetrating (*vīvaya*) he passes over to the side vis-à-vis of his advent, he then stands to the side, he withdraws, he passes right through, or, finally, he obscures the moon and the sun completely. Such observations prove spectacularly plain when compared with the popular belief saying (as is mentioned) that Rāhu has either seized or swallowed the moon and the sun, resp., that by doing so Rāhu's belly explodes, etc. Viy. 575a=Sūrap 288a distinguishes between the *dhuvā-R.* causing the moon to wane and the *ḥavva-R.* causing lunar and solar eclipses, the former occurring every 42 months at the most and the latter every 48 years at the most. The waning and the waxing of the moon, however, are explained by Rāhu's *vimāna*, which invariably accompanies the moon at a distance of 4 *angula* below, successively obscuring the moon by $\frac{4}{82}$ of her disk for 15 days (*kinha-pakkha*)—with $\frac{2}{82}$ remaining free at its uppermost part—and releasing it at the same rate for another 15 days (*sukka-p.*). Those $\frac{4}{82}$ of the disk of the moon come up to $\frac{1}{16}$ of the *Rāhu-vimāna*.

Both the god of the moon and the god of the sun bear the emblem of their qualities in their diadems. They measure 7 *rayana* (Thān. 405b). Their palaces (*vimāna*) have the shape of half a *kavittā* fruit measuring $\frac{50}{81}$ in diameter with the moons, $\frac{40}{81}$ *joy.* with the suns, $\frac{1}{2}$ *joy.* with the planets, 1 *kosa* with the Naksatra, and $\frac{1}{2}$ *kosa*¹ with the fixed stars (i.e. $\frac{1}{4}$ and $\frac{1}{8}$ *joy.*). Their thickness is one half of it. They do not move of their own strength, but 4,000 gods are pulling the moons and the suns² in all directions, 2,000 are doing so with the

1. Up to 500 *dhāṇu* Umāsvāti on T. 4, 14

2. As to the pl see below

planets, 1,000 with the naksatras, and 500 with the fixed stars; those in the east have the shapes of lions, those in the south such of elephants, those in the west of bulls, and those in the east of horses. The speed is in inverse proportion to these tractive powers, whereas the importance (*iddhi*) is in direct proportion to them. This movement, however, only occurs within the field of Samayakhetta, while the stars beyond the Mānussuttara mountains—their dimensions are half of those on this side—are fixed and do not move.

§126. As now to this movement itself, it is said to continue above the Jambuddīva as with a lion's roaring (*ukkhittā-sīhanāya-bola-kalakala-saddena*) right round the Mandara (Sūrap.: Meru), and it does so in a normal course (Viy 206b, Jiv. 346a; Sūrap 278b). The moon accomplishes it in 15, the sun in 184 circles (*mandala*) which widen and narrow in the course of a year. The advance from a narrower to a wider circle (*nikkhamai* as against *pavisai*) is not by leaps (*bheya-ghāṇaṃ*) but by forming a spiral (*sūrie kanṇa-kalaṃ nivveḍhet*¹) as is explained by Sūrap. 48a with regard to the sun. The process of widening and narrowing results in the solar year of 366 days (Sūrap 11a), and it causes the length of the day decreasing from 18 down to 12 *muhutta* and again increasing up to 18 as compared with the length of the night. Every further circle produces a day shorter by $\frac{2}{81}$ *muh*, shorter, since of the 184 circles but 65 go above the Jambuddīva—i.e. their innermost, as with the moon, 180 *joy* distant from its edge—whereas the remaining go above the Lavana sea (Jambudd 434a). With the moon it is 5 of the 15 circles. She stands 880, the sun 800 *joy*. above the earth surface, the fixed stars stand lower than the latter with 790, the naksatras with 884 higher than the former, and the planets at a height of 888 up to 900 *joy*. The shortest (but invariably constant) distance of a star (*jōisa*) from the Mandara is 1,121 *joy* (Jiv. 376b, Sūrap 259b). All these

² *kanna-kalaṃ*, acc to the comm, is an adverb and should be analysed by something like *karma-kalā yathā bhavati tathā kanna*, however, is the most acute angle forming by the emergence of the new circle from the preceding.

stars represent the retinue of a princely couple, the moon and the sun, consisting (Jambudd. 521b) of 88 planets, 28 nakṣatras and 66,975 times 10^{14} (i.e. 1 *kodakoḍi*) of fixed stars. Among all of them we shall see but the nakṣatras stand out, since they are important for dividing up the year. The planets (*gaha*) with Ingāлага ranging first are enumerated but annexed by Sūrap. 294b, while Jambudd. 532b does so in a more casual way. Six of these planets, i.e. Sukka (Venus), Buha (Mercury), Bahassai (Jupiter), Angāлага (Mars), Saniccara (Saturn), and Ketu are comprised by Ṭhān. 354a as *tāraggaha*, to which Sth. remarks that the common number of nine is made up by adding the moon, the sun, and Rāhu.¹ Of the different fixed stars, the polar star in special, we hear nothing. Now, acc to Jambudd. 495b, the 28 nakṣatras are called as follows: Abhūi, Savana, Dhanitthā, Sayabhisayā, (5) Puvva-Bhaddavayā (Potthavayā); Uttara-Bh (P.), Revaī, Assinī, Bharanī (10) Kattiyā; Rohinī, Magasira (Sūrap 132a. Samṭhānā), Addā, Punnavvasū, (15) Pussa (Pūsa); Assesā (Asilesā), Mahā, Puvva-Phaggunī, Uttara-Ph, (20) Hattha; Cittā Sāi, Visāhā, Anurāhā, (25) Jetthā, Mūla, Puvv'Āsādhā, Uttar' Ās. The beginning with Abhūi in the first month of the rainy season is expressly stated by Sūrap. 93b (96a is correct) as against other authors who start with Kattiyā, Mahā, Dhanitthā, Assinī, or Bharanī. In the Sūrap. we are told the design formed by each individual nakṣatra as well as the number of its stars which is between 1 and 7 (this partly also in Ṭhān. 99a, 178a, 289a, 351b, 379b, 414b), and that each has a deity and a gotra of its own. Important occurrences in the life of a Tithagara happen in the sign of one and the same nakṣatra, comp. Āyār. II, 15, 1, Jinac. 149, 170, 204, Ṭhān. 307a. By consulting also some later Śvet—and Dig.—writings KIRFEL in his Kosmographie, p. 278 ff. has given a detailed description of the Jain Astronomy.²

§127. If the altitude of the sun (and of all different kinds

1. Those just mentioned go together with moon and sun as *mahaggaha* (Ṭhān 429 b)

2. Comp also S. R. DAS IHQ 8, 30-42.

of stars in general) is invariably the same, so Vīy 392a=Jambudd. 458b wants to make it clear¹ why at sunrise and sunset we see him *dūre ya mūle ya*, while at noon (*majjh'antiya-muhuttaṃsi*) we see him *mūle ya dūre ya*. Acc to the comm. *mūle* means "near". Owing to the atmospheric obstruction of light (*lesā-padighāenam*), so we are told, the sun is easily visible in the morning and in the evening and, hence, is considered to be near, whereas owing to his blazing heat at noon (*lesā'bhitāvenam*) which by blinding our eyes makes him invisible to us, he is considered to be far off. It may be doubted if by giving this explanation the comm. has grasped the actual meaning. The range of solar radiation measures (Vīy. 392b) 100 *joy*. up- and 1,800 *joy* downward including the depth mentioned in § 111, while horizontally it has 47, 263 $\frac{2}{3}$ *joy*. Contrary to differing opinions terrestrial warmth, however, results from the circumstance (Sūrap. 92b)² that in the intervals between the *lesā* radiated by the residences (*vimāna*) of the gods of moon and sun other and separate (*chinna*) *lesā* are formed (*sammucchanti*) which for their part warm their neighbourhood. Vīy 77b and 392b render detailed information also about the visibility, the radiation field, etc of the sun.

§128 Even where both the moon and the sun are spoken of in the singular—e.g. also in the contemplation of the red morning sun with Mahāvīra (Vīy 656a)—it should always be remembered³ that either exist in duplicate over the Jambuddīva (Sūrap. 175a, 268b). The one follows the other at an angle of 180°. The "scientific" argument, however, is that in the course of 24 hours the sun can complete not more than half of his circle round Mount Meru. When it is day over the southern half it is equally day on the same longitude over the northern, while in the meantime it is correspondingly night to the east.

¹ The question having this in view begins in Jambudd by *kamhā ṇaṃ*, in Vīy by *keṇaṃ kh'āi atthenaṃ*. This form is more archaic.

² The question *tā katī-kaṭṭhaṃ* ("how long") *te sūrie porisi-cchāyaṃ nuvatteti āhī ti vaejjā?* is erroneously anticipated from 94a.

³ Comp THIBAUT in this Grundriss p. 21 f.—"Each season has its sun" (*nānālingatvād ṛtūnāṃ nānā-sūryatvam*) Taitt. Ār. 1, 7, 6, comp. OERTEL, *Dativī finales* etc., Munich 1941, p. 35.

and the west of the Mandara.¹ The celestial bodies produce time (T. 4, 15) in a way that its periods—and Vy. 210a gives full particulars of them up to the largest time units—enter simultaneously in the south and in the north, while in the east and in the west they do so 1 *samaya* later (*anantara-purakkhadamsi samayaṃsi*). Now the duplication of the two princes also involves the duplication of the afore mentioned retinue, and, hence, acc. to Sūrap. 268b we have 56 naksatras, 176 planets, 133, 950 fixed stars over the Jambuddīva. Since, however, each single star completely equals its counterpart in shape and activity (Sūrap. 197o) and since nobody on earth sees a star twice at the same time, the matter is practically of no importance. As was pointed out in § 21, it may be assumed that here we have an analogy to doubled dimensions of the continents and ring seas, though outside the Jambuddīva this analogy soon comes to an end. It is true, the Lavana sea still has 4 moons, 4 suns and the corresponding other double numbers, but over Dhāyāikhandā there stand 12, over Kāloya 42, and over Pukkharavara 72, and the remaining stars are multiplied correspondingly (Sūrap. 268 ff). The course of a celestial body circling over sea of course lacks a centre point which on the continents is given by the Mandaras. Over Pukkharoya up to the Kundalavarobhāsa sea there are x stars each of the different kinds, and from Ruyaga on 2 stars each (Sūrap. 282), but, as was said before, they are fixed and do not wander (*cāra-tthiyyā, no gai-raiyā*; Sūrap. 278b; Jiv. 345f, more plainly Sūrap. 278a), for beyond the Manussa- or Samayakhetta there is (or either for that very reason) no longer any division of time (§ 122).

§129. *The Upper World* (uddha-loga). The upper world begins at an altitude immeasurably high over the stars. There, again separated from each other by intermediate spaces of 1 *yoj.*, its different sections lie one above the other by stories. These interspaces are partly formed by the hulls enveloping the Raya-

1. The word "half", as already noted by Abhay is not quite correct. Since all 4 directions are in question we are concerned with quadrants

2. For a survey see KIRFEL, Kosmog. p. 337 ff.

nappabhā together with the centre world. The idea represents itself as follows the nethermost celestial regions (*kappa*), Sohamma and Isāna, lie on the same level above the viscous water hull, above them and beyond the viscous wind hull there follow the heavens—if we may say so—of Sanamkumāra and Mahinda, and above the latter one after the other. Bambhaloga, Lantaga, Mahāsukka and Sahassāra¹ Following Sahassāra we have the light wind hull and an interspace supporting the 4 uppermost heavens of Ānaya and Pānaya, Aruna and Accuya in twos each one above the other. Hence, from the fact that obviously the viscous wind hull is more concave than the viscous water hull and the subsequent hulls more than the preceding ones, it follows that we come to have the spaces for the above mentioned regions. By Aruna and Accuya the group of the 12 *kappa* ends. Above them there lie first the lower, the intermediate and the upper Geveja places each again consisting of a lower, an intermediate, and an upper part, then on one level the 5 Anuttara regions, and above the highest point of their centremost (we shall deal with the details later) the region of Īsipabbhāra, the place of the Siddhas, above which the world ends. In consequence thereof, those *kappa* that lie on one level in twos are crescent shaped with their diameters either in the north or in the south. Acc. to Umāsvāti, on T 4,20, however, we never come across a side by side position, but each region lies above the preceding, i. e. Isāna (Aisāna) above Sohamma (Saudharma). The Anuttara region of Savvatthasiddha measures 100,000, that of Īsipabbhārā 4, 5 mill *joy* in diameter. The circles of the remaining have radii of an infinite length. But the Bambhaloga is considered the largest², most certainly because it includes also the so-called Black Fields and the Logantiya places (§ 134). At the same time the Bambhaloga is qualified by having the greatest curvature (*uggaha-uggahiya*, Vīy. 616a)³. This can

¹ The Dig in T 4,20 again render pairs by noting Brahman and Brahmottara, Lantava and Kāpiṣṭa, Śukra and Mahāsukka, Satāra and Sahasrāra

² Than. 166 b

³ That is to say at the *uggaha-kandaga* (scil. Brahmalokeya) Vīy. 616a.

only be understood by casting a look at the world profile (comp. § 103). Above the narrow waist representing the centre world¹ the upper world increases horizontally and tapers off capwise above, as was just mentioned above. At the place of its widest extension we have to imagine the Bambhaloga.

§130 Just as the regions of the lower world count by layers, so do those of the upper world, and they, too, are called *patthada*. They are but sporadically mentioned². In the 4 first pairs there are 13, 12, 6, 5, in Ānaya up to Accuya 4 times 4,³ in the Gevejja 3 times 3⁴ and with the Anuttara 1.—The number of the places occupied by gods (*vimāna*) decreases from below to above. In Sohamma and Īsāna, for instance, they amount to 3,2 mill., in Sahassāra to 6,000, in the Gevejja to 318 altogether, and in the Anuttara to 5. Their total number is about 8,497 mill.⁵ The southern halves contain a greater number than the northern. Their downward depth and their altitude⁶ invariably add up to 3,200 *joy*. From Sohamma and Īsāna measuring 2,700 *joy*, the depth decreases in pairs as far as Sahassāra, then by 100 *joy* each as far as the Anuttara down to 2,100, while the height increases in proportion. The arrangement (Dev. 208 to 218) is either by sequences or at will, and, accordingly, the shapes are either circular, quadrangular or triangular (Thān. 144 b), or else they vary. Only

1 This part is conceived as two layers of (comparatively) insignificant height (*khuddāga-payara*, comp. Thān. 477b) one resting upon the other (*uvarima-heṭṭhilla*). The world profile is completely even (*bahusama*) here and not bulging (probably *savv' aviggahiya* instead of *savva-vigg*, V. 616a).

2 In Pannav, where they ought to be expected, they are but mentioned relative to the Gevijja places (104b), Thān. 367b is the only one to name the 6 of the Bambhaloga. The details above follow the comm. on this passage.

3 *terasa bārasa chap panca c'eva cattāri causu kappesu* Sthān. 368a must probably be understood as above, since the total number is said to be 62 here. Hence we have to suppose that Bambhaloga is thought to lie on one level together with Lantaga, Mahāsukka with Sahassāra, while Ānaya, etc., each lie on a level of their own.

4. For their names see Thān. 452 b.

5. Comp. JACOBI ZDMG 60, 322.

6 *vimānaṃ mahānagara-kālpam, tasya c'ṣṭari vanakhandā-praśara prāsād'ādayah*. The *vimāna-prthivī-bāhalya* concerns the former, the altitude to the latter (Jiv. 397b).

some 7,900 places are arranged in sequences. Towards the end of the passages the Samav. mentions numerous places by their names. Of the Anuttara the place of Vijaya faces the east, Vijayanta the south, Jayanta the west, and Avarāiya the north. They are in the shape of a triangle, and the centre is occupied by the circular Savvatthasiddha. It need not be pointed out that the different adamantine places equalling palaces with enclosures and gateways are radiant with all possible beauty and by their own illuminating power. All five colours blaze in Sohamma and Īsāna, in every following pair one of them vanishes, until at last, above the merely white Ānaya etc., the Gevejja and Anuttara glisten in a still higher purity of white.

§131. The gods of the upper world are called Vemāniya according to their places of residence, and they are distinguished into such that reside in the *kappa* (*kappôvaga*), and such that have gone beyond them (*kappāīya*). With them, too, the place is marked by emblems. Moreover, their outward appearance is such of paramount beauty and immaculate radiance (Pannav. 100a). Their size, however, decreases with the height of the region. In Sohamma and Īsāna it still amounts to 7 *rayana*, in every successive pair there is one less, until the Gevejja measure but 2 and the Anuttara not more than 1 *ray*. The 12 *kappa* are commanded by princes (*inda*). In Sohamma his name is Sakka whose capital seat, the *Suhammā sabhā*, gives the whole its name, in the Bambhaloga most naturally Bambha, in Ānaya and Pānaya Pānaya, in Ārana and Accuya Accuya. The remaining are called according to their regions.¹ Further up there are neither princes, nor are there any distinctions of rank being observed any longer (s b.), and anyone may call himself a prince.² As among the Bhavanavāsī it is but Camara, the ruler of the first kind, and Bālī, that come into prominence personally, so among the Kappa gods it is scarcely but Sakka

1. This would mean 10 princes. Later there are 12 since as against Pannav. 103b f, Thān. 85a the 4 highest *kappa* have 4 princes of the same names (Dev. 167, Umāsvāti on T. 4, 20).

2. *Ahamindā nāmaṃ te deva-geṇā pannattā*, Pannav. 104b, etc.

and *Isāna* that do so. Their attributes are, according to tradition, the thunderbolt and the elephant as a draught-animal with *Sakka* (*vajja-pāṇi erāvana-vāhana*),¹ the spear and the bull with *Isāna* (*sūla-p usabha-v*). As a prince of the south *Sakka* is superior to *Isāna* (Viy. 168 a). For the way he punishes the *Asurakumāra* comp. Viy. 3, 1, and for the way they have a squabbel with *Sakka* see Viy. 3, 2. We are also told of *Sakka's* pre-existence (Viy. 737b). Other details (Viy. 633b, 405b with ref. to *Rāyap.*, see LEUMANN VIth OC III, 2, p. 495 ff., 644b) concerning his faculties, his palace, etc., are not characteristic of him alone, but they give proof of his popularity. *Sanamkumāra* is placed above both him and *Isāna* since both appeal to him as an umpire in points of controversy (Viy. 168a), and just as much the princes of every higher region may be supposed to be the superiors to those of the lower. So, then, it is *Sakka* who inaugurates the consecration of the new-born *Titthagara*, whereas it is *Accuya* who executes it (*Jambudd.* 395a, 410a).

§132. It is this the place where to deal with the distinction we observe among all gods, whether it be *Bhavanavāsī*, *Vānamantara*, *Jōsiya*, or *Vemāṇiya*, under the rulership of their princes. They are followed in rank by 4 chiefs of the four districts orientated towards the main directions, the *loga-pāla* (Viy 194b, 203a). Acc. to Viy. 3, 8 they are of nearly equal rank with the *inda*. Their names in every northern half do not only equal those in every southern, but they also reappear in all *kappa*; they are *Soma* (E), *Jama* (S.), *Varuna* (W), and *Vesamana* (N.). A great number of related gods is subordinate to those in the upper world including altogether all different kinds of the *Bhavanavāsī* of either sex, and they, for their part, again control an obedient retinue. They all are bound to watch carefully the most manifold occurrences of importance happening within their world-half either on the earth or in the stellar world. So *Soma* and also the *Vijju*-, *Aggi*- and *Vāukumāra* are entrusted with supervising all possible

1. The traditionally accepted description of *Sakka*, *Jinac.* 14.

disturbances of the peace by the stars, all meteorological phenomena and all terrestrial conflagrations, Jama and the Asura-kumāra with supervising all wars and epidemics, Varuna, the Nāga-, Udaḥi- and Thaniyakumāra with supervising all floods, and Vesamana including the Suvanna-, Dīva- and Disākumāra with supervising the metals and their divine rain at important events. The Vānamantara and Joisiya do not know of any *logapāla*, nor do they know of the class of the 33 highest officials (*tāyattīsa*)¹. Everywhere we have the same number of corps (*anīya*) and their commanders (*anīyāhivai*), i.e. 7 each. Proportionate to terrestrial conditions we find infantry, cavalry (*pīdhānīya*), elephants, bulls, chariots, dancers, and musicians. The infantry consists of 7 army-groups (*kaccha*) each twice as strong as the preceding. The first is formed by the *sāmānīya* gods, the third by the so-called body-guards (*āyarakkha*)* in full armour.² We may skip the names of the commanders except that of Hari Negamesi who is in command of Sakka's infantry while, at the same time, he appears as his messenger.³ He is taken over from the Brahman mythology⁴ as is *Pajjanna*, Sakka's official rainmaker (*kālavāsī*, Vy. 634b, Isibhās. 33, 4). The number of gods who, as it were, are members of the Crown Council (*parisā*) is equally large. Arranged in three gradations this council is called an "inner" ("secret"), a medium, and an outer one, or with the Bhavana-vāsī and Vemānīya it is known by *samīyā*, *caṇḍā*, and *jāyā*, with the Vānamantara by *isā*, *tudiyā*, and *daḍḍharahā*, with the Joisiya by *tumbā*, *tudiyā*, and *pavvā parisā*, denotations which we are

1 For a story explaining their origin see Vy. 500 a

2. It is true that in the traditional division of the state, of the gods into *sāmānīya*, *tāyattīsa*, *logapāla*, *agga-mahisī*, *parisā*, *anīya*, *anīyāhivai*, *āyarakkha* (e.g. Pannav. first 98b), we must distinguish the *sām* and *āy* from the *anīya*, and acc. to JACOBI ZDMG 60, 317 the *sām* are considered by the later authors to be gods of princely rank. But their numbers equal those given for the first *kaccha*, Thān. 406 a, and, moreover, they are very large. Camara, for instance, has 64,000 and Sakka 84,000. There are always four times as many *āyarakkha* as there are *sāmānīya*.

3 For the *anīya*, *kaccha* and commanders see Thān. 406a ff. For the special part played by Hari Negamesi comp. Jinac. 21. 30 (§ 17) where (see also Āyār. II 15, 4) he is called (*hyānukampanta* (-paga) *deva*). He is represented by the head of an antelope (comp. JACOBI SBE 22, 227).

4 Comp. WINTERNITZ JRAS 1895, 149 ff.

partly able to interpret differently or either not at all (Thān. 128a; Viy. 202a; Jiv. 164b). It would take extensive tables to render the figures both relating to these gods and to the *sāmānya*, and we may content ourselves with saying that the outer council is the largest and that all three of their kind are also shared by goddesses, though to a comparatively small extent only.¹

In the afore mentioned sequence traditionally acknowledged we also find the chief Queen Consorts numbering 4 to 8 (though from Sanamkumāra onward they disappear) together with their attendants, whereas we miss the ministering gods so frequently listed elsewhere (*ābhigīya*), their absence being apparently due to their being classed with the centre world.²

§ 133. The activities of the godly princes and their heavenly hosts have been sufficiently explained by the description concerning their state organization faithfully reflecting human living conditions and involving their terrestrial shortcoming, i. e. rivalries and struggles. The range of power (*iddhi*, Thān. 172a) of a god goes beyond four to five godly places pertaining to his class; beyond it he requires support (*par'iddhi*). Of two gods possessing the same amount of power he will lose the battle who fails to be on the alert (*paramatta*). Circumstances permitting trickery (*vimohittā*, Viy. 498b, 637a, 751b) is employed, e. g. the producing of darkness. To a sinful heretic god it may happen that he attacks a spiritually advanced monk (*majjham majjhenam viivaya*, Viy. 636b), most certainly because in exercising magic (§ 181) he thinks him to be his like.

The life of the gods passes in a state beyond time (Viy. 522a)—since the stars dividing time merely pertain to the centre world—in the unearthly radiance of the figures with their jewelry and their princely residences (Thān. 263a).³ They pass in luxury and pomp and in the enjoyment of sensual

3. The decrease of this radiance indicates that the godly life in soon going to some to an end (Thān 141b)

pleasures which, however, decrease in intensity according to the height of the divine abode, since it must be remembered that the mutual intercourse of the sexes is executed in ever nobler ways, until beyond the Kappa regions all desires have come to cease (Thān. 302a; Pannav. 547b; T. 4, 8 to 10).¹ When the gods make their appearance in the centre world it is to serve the veneration of the Tittthagaras in the great moments of their lives. For the Tittthagara rules the worlds : just as his birth, his departure into monkhood, his inspiration by supreme knowledge, all lighting up the whole world (*lo'ujjōya*)—while his decay and that of his teaching bury it in darkness (*log'andhayāra*)—, so they shake the seats of the gods and cause them to send rains (Viy 634b) and to draw near in veneration. Comp. Thān. 116 a ff Jambudd V. In the same way the future *cakkavaṭṭi* on his campaign of conquest acts on the local deities, comp. Jambudd. III. By sympathy and apathy a god remains attached to the world (Thān. 144b). In the beginning of his career also private inclinations lead him back to the centre world : his gratitude towards his former teacher, his veneration for an ascetic, the display of pomp in front of his family, an appointment with a friend (Thān. 142b, 253a).² As to his faculty of crossing the world a god knows of no limits, but his interest in doing so dwindles the more the higher he is seated (Viy. 752a; comp Umāsvāti on T. 4, 22). In order to make their appearance in the centre world the gods betake themselves to the continent of Nandissara to the south-eastern Raikara hill (Jambudd 402a). The place where Camara manifests himself is the silver mountain of Tīricchakūda which does not taper off but, narrowing at half of its height, offers a plane on its top measuring about three quarters of the width of its base. It rises to 42,000 *joy*. from the Aruna sea to the south of the continent bearing this name (Viy. 144a) From the

1. Gods have intercourse (*saṃvāsaṃ gacchati*) with Asuras, Rakhasas, humans and beasts of either sex. This discrimination pertains to the popular belief, not to dogmatics. Humans (*māṇusa*) as well as beasts seem to be called *chavī* (Thān 193a, 274a)

2. Both passages also contain the cases where the celestial enjoyments arrest him in spite of such a natural desire.

same sea there also rise the *upphāya-pavaya* of the Nāga and Udahi princes, those of the remaining Bhavanavāsī rulers partly on the Aruna continent and partly elsewhere ¹

§ 134 Before we come to the end of this chapter we shall deal with some classes which, though relating to space they stand near by the hitherto mentioned Vemāniya, are not included by them, and to do so we have to be somewhat circumstantial. Darkness is conceived as being of a material quality (*tamu-kāya*), and this matter is supposed to be an aggregate not of earth, but of water. In the centre world, 42,000 *joy* distant from the continent of Arunavara into the sea bearing the same name, darkness rises (Viy 267b, comp. also 246b) as a wall, which, hence, must be ring-shaped, having the thickness of a space unit (§ 58) and reaching up to 1,721 *joy*. Above this height its extension increases to fill the four nethermost heavens up to the Ritttha region (s b) in the Bambhaloga.² As far as it extends the darkness is so intense that even a god would like to escape. Among its 13 names³ we find the one of Arunodaga.⁴ The upper continuation of the darkness-matter is represented by the 8 Black Fields (*kanha-rāi*).⁵ They lie above Sanamkumāra and Mahinda in the Ritttha region of the Bambhaloga, and there are two of them in every direction, an inner and an outer one. Furthermore that much is clear that in between there are intermediate sections of the same number. That absolute darkness so characteristic of those regions does not reign there, but these sections contain the 8 abodes of the Logantiya gods (Thān 61b,⁶ 432a, 452b; Viy. 267b: Āyār. II 15, V). They comprise Sārassaya and Āicca, 14 Vanhi and Varuna each, 7 Gaddatoya and Tusiya each,⁷

and 9 Avvāvāha¹ and Aggicca each with each having a retinue of 100 or, resp., 1,000. In the centre of this circle forming out of Black Fields alternating with Logantiya abodes there lies Rīthābha whose gods (again 900 in number) are equally counted among the Logantiya.² The qualities of all these abodes correspond with those of the Bambhaloga, and as does the latter they, too, of course rest upon the hull of viscous wind.

Analogous to the Logantiya in the Bambhaloga, the Kibbisīya gods (*deva-kivvisīyā* Viy. 488b; Thān. 162a) in different Kappa occupy special places corresponding to their lower³ rank already expressed by its name. According to the time their lives are supposed to last they are grouped into three classes. Those of the lowest dwell in the lower region of Sohamma and Īsāna, those of the middle on in that of Sanamkumāra, and the uppermost in that of Lantaga.⁴

§ 135 Both the position and the kind of the place representing the abode of the Siddhas are known from Uvav. 163 to 167.⁵ 12 joy above the highest point of Savvatthasiddha measuring 10,000 joy in diameter we find the circular shaped region of Īsipabbhārā 45 mill joy. wide, thus extending over it like an open umbrella. Its central thickness measuring 8 joy decreases towards its edge until it is even thinner than the wing of a fly. Hence it owes its name to the small inclination of its surface. Its radiance is of an immaculate white. One joy above it the world comes to an end. In the uppermost part of this *joyana*, or, more correctly, in its last twenty-fourth, we have the place of the Siddhas (§ 187).

1 The Avvāvāha gods owe their name to their performing plays on the eye-lids of a man without giving him any physical trouble by doing so (Viy. 653b).

2 Subodhikā p. 273 (ref. to Jñac. 110). Here the differing forms of Aruna and Tudiya. For Aruna see also ZDMG 60, 323. Both the 8 Logantiya and the Rīthā are called 9 *deva-nikāya*, Thān. 516b.

3 Acc. to Sthān. they are untouchable as are the *caṇḍāla* (162b).

4 The *prakīrnaka* gods mentioned T. 4, 4 do not appear in our passages.

VI RENUNCIATION

§136. The mode of life practised in the monastic community¹ is called *kappa*. While the late Pancakappa knows of up to 42 different *kappa* divided among five different methods (§52), we have but six according to the old tradition (Thān. 167b, 371b; K. 6, 14). Thus the monastic order, the *kappa-tthu*, is sixfold. Before his consecration the monk lives in the state of the *sāmāya-* (or *s-samjaya-*)*k-tthu* (§ 138). It also includes the followers of Pāsa (§ 16) who do not take the vows. The monks of the *cheovatthāvanaya-k-tth* are exclusively followers of Mahāvīra. They have gone through with the process of taking the vows (*uvatthāvana*) thus ending either their state as pupils or their membership of the *Pāsavaccijja*, unless it be that, as a punishment of the *cheya* (§ 16), they were forced to repeat it. Another pair are the *nivvisamāna-* and the *nivvutthakāya-k.-tth.* of those monks that were sentenced to disciplinary punishment (§ 161). The teaching of right conduct (§ 177) which starts with the two mentioned first comprises the last two by a special name. A third pair is, in a certain way formed by the *jina-* and the *thera-k-tth* for qualifying such monks that, for the purpose of some extra self-castigation, have withdrawn from the community (§ 142), and such following the general rules. (§ 140)

All that a good monk practises or from what he abstains (*samācāra*) adds up to the *sāmāyārī*. In its special sense, however, the word applies to 10 deportments² of a monk referred to by Thān 499a, Vīy. 920b, 102 b, Utt 26, 1-7, Āv. 7; they comprise the compliance with a wish, the admission of one's being guilty (§ 159), assent (*icchā-kāra. micchā-k, taha-kk.*),

1 For many details taken esp from the Niguttis and Bhāsas the reader is referred to Sh. B. DEO, History of Jaina Monachism from inscr. and lit., Poona 1956. Rev. by ALSDORF JAOS 1959, p. 319 ff, the AUTHOR ZDMG 109, p. 225 f.

2. Thus LEUMANN, übersicht. p. 9b

formulae for either leaving or entering (*āvassiyā*, *nisīhiyā*, § 151), a request for instructions as well as for confirmation—either a question concerning oneself and someone else (*āpucchānā*, *paḍipucchānā*), placing something at somebody's disposal and giving a promise (*chandanā* and *nimanlanā*), and, finally, entering upon a new novitiate (*uvasaṃphayā*). For *nimanlanā* we also have *abbhuttāna*=service.

The canonical sources for what concerns monastic life are, in the first place, the Cheya- and Mūlasuttas along with Āyār. II and a number of scattered notes in Thān. and Vīy., whereas for all question concerning laymanship the Uvās are the main text. The late Mahānisiha holds a special position, and as to its deviations we can refer to them in a few cases only. It may suffice to refer to the AUTHOR's treatise on this work (§ 52). Rather young Dig. texts which for us take the place of the Cheyasutta or, more precisely, that of the Jīyakappa, are the Chedapinda (Cheyapinda, Chp) of Indranandin, allegedly the 4th section of the Indranandisamhitā, and the anonymous Chedānaudi (Chn), called Chedaśāstra in print. In the following some few details will be pointed out to.

§137. The adherents of Mahāvīra's teaching constitute the community (*saṃgha*). It comprises both monks and nuns as well as both male and female representatives of laymanship, and hence it is called fourfold (Vīy. 792 b; Thān. 281b).¹ The name for the monk is, partly, rather epithetic in speaking, for instance, of *cāi*, *jai*, *niyantha*,² *māhana*, *samana*.³ The Vīy. mostly speaks of *anagāra* and *samana niggantha*. In the texts purely concerned with disciplinary questions the monk is called

1 When Chapp, a Dig. work, in I, 18 states that *linga-darśana* is confined to monks and both laymen and lay women (called *ukkiṣṭha* and *avara-ṭṭhiya sāvaya*) and that there is no fourth group, this cannot mean that there were no Dig. nuns. For Chp 278, 289, 258 and Chn 71, 93 call the community by the name of *cauvanna* and they provide regulations for the *samanī*. This is also done in the Mūlācāra and by Indranandin in the Nītisāra.

2 Vīy 112b calls the layman Pingalaga (§ 17) by this name.

3 *samana* and *māhana* in connexion with individuals in want of help to whom the monk gives precedence—comp. gloss on Āyār. I and the *vaṇimaga* of 5 kinds Thān. 341b—probably apply to non-Jain beggars. But a *tahā-rūva*, i.e. obviously distinguishable as such, *samane vā māhane vā* is, in this connexion (Vīy 140b, 289a, 373a), a *niggantha*.

niggantha, *bhikkhu*, *samana niggantha*, later *sāhu*. He is addressed by the words of *āusanto samana* and *saman'āuso*. Fellow-believers go by the names of *sāhammya* and *sāhamminī*. The nun is called *nigganthī*, *bhikkhunī*-, and *sāhunī*.¹ There are various reasons for devoting oneself to monkdom, i.e. the *pavvajjā*, which actually mean the departure from homely life into the state of homelessness (*agārāo anagāriyaṃ*). The motives for doing so differ widely. They may be found either in extrinsic reasons or in some inner urge just as they may be either of a more noble or a more vulgar character, comp. Thān. 128b, 276a, 473a—passages which, partly, give the impression of holding up a mirror to the monks. It is certainly true that in many cases the former life of a person made itself felt also later, since we are told of nuns who are *attha-jāyā*, i.e. who are the object of some claim or other. Against inopportune elements, however, the community guards itself by means of strict rules. There is no entry (K. 4, 4) for sickly persons (*vāiya*) or such with sexual defects (*paṇḍaga*, *kīva*). The prohibition is extended (a. o. Sthān. 165a) to persons being either too young or too old, being either of a vicious nature or unqualified, being previously convicted, suffering from bodily infirmity or else not being master of themselves, e.g. on account of being involved in debts (*an'-atta*). Furthermore there are the *guvvinī* and the *bālāvacchā*. In other respects any person is free to enter and may do so even as early as a child of seven years and a half,² though, to be sure, at this age there can hardly be the question of voluntariness. *pavvāvettae* consists in the act of handing over the outfit, and it may be performed both by a nun and a monk.³ It deserves mentioning that acc. to Thān. 56b this act as well as those immediately succeeding and, later, the studies, the confession, and the fasting-death, must be "orientated" towards the east

1. For shiftings in the usage of these words comp. the AUTHOR, Vav p. 8

2. The little monk Aśmutta who makes a boat swim in the rain (Viy. 219a. comp. the AUTHOR, Wort p. 19) is scarcely much older

3. Comp. the *nigganthī-pavvāmyaya* Thān. 314b. Haribhadra as Yākinī-dharmaputra was such a one

and the north. The novice's head is shaved clean of hair (*mundāvettae*). He is now *munda*, i.e. "bare", a word equally applied to the state following the suspension of the five senses and the four passions (Thān. 334b, 496a). From now on the hair may not grow to a length longer than cow-hair, and this, too, only during the rainy season. Every half month it is alternately cut by scissors (*khura*) or altogether removed by shaving; every six months or every year what of hair has grown is torn out (Pajj 57, Nis. 10, 44). This is the act of the *loya*, comp. the *lūya-siraga* Dasā 6 XI. In the legend we read of the *pancamutthiya loya*, the act of tearing out 5 handful of hair, being performed right at the beginning of one's becoming a monk, e.g. for Mahāvīra Āyāra II 15 § 22 (a),¹ for Subhaddā Pupph. 32a, and thus it is done up to this day. This process certainly goes back to an ecstatic eruption.

§138. The beginner is given into a teacher's tutelage (*sikkhāveī*, *schāveī*) and remains in the state of a novice or pupil (*seha*, *schatarāga*) for at least one week, for six months at the longest, but on the average, as seems to be the case, for the time of 4 months (Vav 10, 15=Thān. 129b). The novice is not yet subject to the whole austerity of the regulations; thus he is allowed to partake of alms, as a monk is not, when offered to him by the latter, provided that it does not contain anything living (K 4, 13). The novitiate comes to an end by the novice's taking the vows for becoming a monk (*uvattthāvanā*, later *dikkhā*, *dīksā*). This may not be done (Vav 10, 16f) before his having reached the end of the 8th year of his life.² A postponement beyond the date up to 10 days is admissible (Vav. 4, 15-17). A candidate who turns out to show the above mentioned deficiencies is granted neither admission (*uvattthavettae*, *-tthā-*, Mahānus. *dikkhettae*) nor the subsequent tutelage

1. Mahāvīra naturally follows the example of his predecessors 2-22, Usabha (1) on Indra's request abstaining from the fifth *mutthi* (Hemac Tris 1, 3, 69-71) — In the Mundaka-Upaniṣad which, acc. to its title, postulated the removal of the hair, HERTEL (comp. his ed. 1926, p. 65ff) saw "distinct allusions to the teaching of the Jains."

2. This date minus the longest possible novitiate of half a year, even when no direct statement is made, results in the above mentioned seven years and a half.

nor is he made a novice (K. 4, 4). The admission implies the taking of the five vows. From here there dates the spiritual rank (*pariyāya*) commanding the relation towards the equals and, for this reason, shortened in case of offence (§ 161). He who ranges in this sequence of age is called *rānīya*¹ (Vav. 4, 24f.); that it is being observed, a.o. by the younger monk (*oma-rānīya* Thān. 240a) giving precedence to the older and by obliging him, is expressed by the word of *āhārāmyāe* or *ahā-r.* (K. 3, 19-21, Vav. 4, 24-32). A monk's age of 20 years represents the *pariyāya-thera* (Vav. 10, 14).

§139. The companionship of monks and nuns in the *saṃgha* is characterized by either side observing strict retinence. It is in cases of emergency only that they are allowed to share the same quarters (Thān. 314a), i.e. in the very centre of the forests, at the cult place of a Nāga- or Suvannakumāra,² when endangered by robbers or persecutors, and, finally, in case of them should not have succeeded in finding shelter. They may speak to each other (Thān 216 b) only for the purpose of asking their way and of showing it, for exchanging food and for asking it to be taken along for an equal, and as to touching a nun for the sake of assisting her (Thān 327b, K. 6, 7-12) a monk may do so only in order to protect her against harm of different kind. In spite of these restrictions monks and nuns go together in forming groups called *saṃbhoga* (Uvav. 30 II, Utt. 29, No 33, Nis 5, 63, comp also § 25). Sthān. 139 a defines it as a community practising in joint action the acquisition and consumption of the monk's outfit (and, probably, of the alms as well).³ In exacting the duties of con-

¹ The comm. is as wrong in deriving this word from *ratna* as is PISCHEL Gr § 132 in tracing it from *aratni* (= 'ell' as a measure for fixing the time of the day by the length of a shadow). It goes back to *rajanī* "night" (= "day") in the sense of "date". That is why the Mūlācāra of the Dig. in 1, 25 calls *rādī* (*rātry-adhika*) him who precedes in the spiritual rank.

² This reference made to the Jain pantheon (comp § 109) by the word of *kumāra* is, of course, secondary. We are concerned with pre- or non-Jain Nāga-stones and resp. places of the Suparna cult.

³ Hence the word has a wider meaning than was supposed by the AUTHOR, K. 4, 18-20. It appears that also *sambhujittae* K. 4 4, Thān 56b, 164b alludes to the *saṃbhoga*, whereas by *samvasittae* (or *samvās*) a different and closer living community is being meant —BUHLER WZKM 3, 237, 4, 316 along with LEUMANN understood by *saṃbhoga* a "district-community" in the kind of the *mandala* known among the Dig.

fession and service it remains within its frame (Vav. 5, 19f). The cancellation of membership (*saṃbhoyam*—for this comp. a.o. also Vav 6, 19f; Āyār. II 66, 12; 106, 20 24—*visaṃbhoyam karettae*, Vav 7, 2-5; Thān. 139a, 300a; 444a) follows from reasons of discipline as is treated in detail by the Vrtti 22bf in the light of the twelve-fold *saṃbhoga* Samav. 21a. As follows from Vav. 7, 1, a person becomes a member of the *saṃbhoga* by being admitted to it; this admittance is repeated when changing over to a new s. in case one should come from a different *gana*. For the *gana*, as we know, is the superior unit embracing several *saṃbhoga* (comp. K. 4, 18-20). This name was already known in the early communities, since Mahāvīra's eleven disciples were called "group leaders" (*ganahara*) (Ther. 1). Their successors have propagated the teaching by branches and schools (*sāhā* and *kula*, Ther 5 ff). Hence the *gana* denotes both a conception regarding the history of the teaching (§ 22) and a technical term. The same applies to the *gaccha* by which the former was replaced in the later parts of the Canon, e.g. in the Painna (incl. the *Gacchāyāra*¹) and the Mahānisiha. The branches of the Śvet are known to call themselves *gaccha* (§ 34). Uvav. § 31 speaks of the *gaccha*, if only in the phrase of *gacchāgaccham gummagummam phaddā-phaddam*, but it is not likely that they are allusions to actual groups, even though the comm. subordinates the *gaccha* to an *āyariya*, the *gumma* to an *uvājjhāya*, and the *phadda* to a *gaṇāvaccheya* (§ 140). There may be different personal reasons (Thān. 381 a) for changing the *gana* though this may be done once only in the course of six months (Dasā 2, 8) unless one risks to be called as *gāṇaṃganiya* (Utt. 17, 17 along with comm). For leaving it needs the permission of the superior, and even a teacher who wants to do so because as a teacher he does not fill the requirements, or because he is in love, or else because he should not like to part from others leaving (Thān. 331b, 385b), is bound to give up his office (K. 4, 15-20). To remove obstinate from a *gana* (K. 4, 25) or to refuse his admittance (Vav. 2, 6-17) is called *nijjūhettae*.

1. In the Gacch. we have *gaccha* alternating between masc. and ntr.

Among the different reasons for which a monk leaves his *gana*, we also find his wish for performing an *egalla-paḍimā* (also Thān. 171a), i.e. one of the ascetic exercises to be described in § 157. With Vav. 1, 25-27 where his return to the old *gana* is settled, there are connected (1, 28-32) similar regulations regarding his temporary withdrawal owing to his wish for seclusion, though acc. to Dasav. 12, 10, this wish must not be granted for a time longer than one year. Here as well as elsewhere (a.o. Vīy. 501a, in the Nis not before 4, 28-37) the monks are called *pāsatttha*, *ahacchanda*, *osanna*, *kusīla*, *ṇṭiya*, and *saṃsatta*.¹ These names express different kinds of displeasure and spiritual weakness. We also find the cases of an undisciplined "escape" (*ohāvaṇi*, *ohāna*, Vav. 1, 33; 2, 25; 3, 18-22; 4, 14; Dasav. 11 beg.), i.e. of a monk's return to civil life.

§140. Both monks and nuns are under the command of superiors, in the first line under that of the *āyariya* and the *uvajjhāya*, to whom we have to add the *pavattinī* for the nun (Vav. 3, 11 f.). General expressions for subordination are *purao kaṭṭu* (*kāuṇ*) *viharai* (K. 3, 14, Vav. 4, 11, Pajj. 46. 48) and *disaṃ* (*aṇudisaṃ*) *viharai* (Vav. first 1, 22-24; Nis 10, 11 f.). The superiors are enumerated in the order of *āyariya*, *uvajjhāya*, *pavattī*, *thera*, *ganī*, *ganahara*, *ganāvaccheyya* (K. 3,¹ 14; 4, 15-23; Ā yār. II 66, 33; 67, 7; 80, 31 etc.; Nandī 252b etc.), In this order of succession the *thera* is followed by the leaders for the exterior formation. The *ganī* by way of his name is the head of the *gaṇa*. The qualities by which he has to distinguish himself are, most naturally, eminent qualities of the mind manifesting themselves by knowledge, exemplariness, and a high proficiency in teaching, as well as such of the body represented by physical efficiency and an engaging appearance. They all go together as the 8 *gaṇi-saṃpayā* Dasā 4, 1-8=Thān. 422b. The duties of the *ganī* are dealt with by the *Gaṇavijjā* based on considerations concerning both the calendar and the horoscope. Here we see the

1. Examples are the nuns named Kālī (Nāyādh II 1), Subhaddā (Pupph.), Bhūyā (Pupphacūl) The *kusīla* of allegedly 200 different kinds is treated by Mahānis. 3

gana being summoned by him for certain ceremonies (*gana-saṃgahanam kujjā* first 27) apart from the *ganī*'s performing the *seha-nipphedana*, *s-nikkhamana*, *vaṭṭatthāvana* and other duties which, as will presently be shown, is the task of the *āyariya*. The *ganin*, however, is—to speak with Sthān. 140.—*gan'ācārya*. Acc. to Ganiv. 37 the (common) *āy* is explicitly meant to be the object of an act performed by the *ganī*, and he, too (Ganiv. 40. 76), commands the *ganahara* and the *ganāvaccheiya*. The latter, being of a lower rank (see later) as is indicated by his designation presides over a part of the *gaṇa* nominally¹ A nun occupying this office is called *ganāvaccheinī* (Vav. 5, 3f 7-10. 16)² He who is pious, honest, intelligent, learned, efficient and sociable is qualified for *ganam dhāretta*, i.e. the profession of the *ganahara* (Thān. 352b) The monk himself volunteers to take over this office, and his *thera*, provided that they can do without him, are bound to give their permission (Vav. 3, 1f); At any rate the word of *ganahara* has lost much of the meaning it had in the times of the early communities

§141. Parallel to those mentioned above the spiritual leaders in this sequence range on a descending line according to their rank.³ At the top we have the *āyariya* who by his person embodies both the teacher and the master (*dhamm'-āyariya*), though he, too, directs the act of admitting and instructing the disciple or pupil (*antevāsī*) (Vav. 10, 11f.—Thān. 239b). Moreover he is bound to inspect the objects of the outfit obtained as a present and the alms that have been accepted (K 1, 39, Dasav. 5, 1, 90, but Nis 14, 55, 18. 25 says something the like of the *ganī*). The office held by the *uvajjhāya* consists in his task of instructing in the reading of the teaching's text. Where there is a discrimination being made between the text (*sutta*) and its deeper meaning (*attha*), it is the task of the *āyariya* to instruct in the latter and that of the *uvajjhāya* to do so

¹ Contrary to this, however, Ācār. 322b describes the *ganadhara* as being the head of a group living separate from the *gana* and acting for the *ganin*, and the *ganāvacchedaka* as *gaccha-kārya-cintaka*

² 5, 16 read *ganāvaccheipittam* with the Sthānakvāsī print Haidarabad instead of *ganāvaccheiyattam*

³ The transl. in K. is to be corrected correspondingly.

in the former, comp. Sthān. 140a. Standing between either we have the *āyariya-uvajjhāya* (also *āyariḍuvajjhāya*) by whom the comm—they might refer to Vav. 4, 11f.—mostly understand (comp. Sthān. 329b; Vy. 232a) two persons, and this may apply to the few cases where the word is in the plur., e.g. Vav. 1, 34. But thanks to what we are told (Vk 7, 15f; 3, 3-8) there can be no doubt that, apart from being otherwise qualified, the *uvajjhāya* in order to meet the demands of his position must have been a monk for three years running and hence, on the ground of the syllabus (Vav. 10, 20ff. § 39), must at least command the knowledge of the *Āyārapakappa*, while the office of an *āy.-uv.* asks for five years and the *suyakkhandha Dasā-Kappa-Vavahāra*, and that of an *āyariya* for eight years and the *Thāna-Samavāya*.¹ The K. and Vav. frequently refer to the *āy.-uv.* (Thān. 444a to both the *āy.* and the *uv.*) in connexion with the *ganāvacccheyya* whom he preceds in rank since he is allowed either five or seven privileges (*aīsesa*), while the latter may enjoy but two (Vav. 6, 2f; Thān. 329a; 403b). He himself suggests his successor in office to be promoted (*samukkasanā*) (Vav. 4, 13f), the appointment is called *aṇunnā* (Thān. 139a), whereas the monk on his part² may change the *āy.-uv.* only with the consent of his superiors and by giving the reasons for doing so (K. 4, 21-23). It is a matter of course that by any culpability the qualification for teachership (*āyariyattā*) is postponed, interrupted or either altogether cancelled (Vav 3, 9. 13—29, 4, 17, 5, 15f),³ unless the *kula* to which the person concerned belongs enjoys an exceptionally good reputation. *kula*, however, means a school having formed around an outstanding teacher and his followers, and two schools of such kind, when being related with each other, constitute a *gana* (comm. on Ther. 5). As to the duties of a *pavattī* the texts

1 Acc to Vav 3, 7 the 8 years entitle to the *āyariyatta jāva* (in the Sthānakāṇṣi print rendered by *pavattittha theratta ganittha*) *garāvacccheyatta*. This does not correspond with the order of precedence, and possibly the words of *jāva gan* (and their resp renderings) have but crept into the text after the model of other passages. Equally so in the comm on Uvav 31 (above § 140).

2 This does not fully harmonize with the *garāv* and least of all with the *āy.-uv.* (4, 22f.)

3 For merely pretending the virtue of an *āyariya* see Nis 17, 132.

fail to provide us with detailed references, though acc to Ācār. 322 p. this "promotor" is known to deal with matters of practical concern and not with instruction. His female counterpart, the *ṣavattinī*, acc. to K. 1, 41f (and 3, 13f) holds the position of the *āyariya*, acc to Vav 5, 1f., 5. f., 13f. (as compared with 4, 1f., 5f, 13f) that of the *āy.-uvajjhāya*. To rise to the rank of an *uvajjhāya* it takes a nun 30 years and even 60 years before she is able to become an *āy.-uv.* (Vav. 7, 15f). Acc. to Vīy 375a the *ṣavattinī* stands parallel to the *thera*. As mentioned before, *thera* (Thān. 516a) or *therī* does not only mean a monk or a nun with a 20 years' seniority but equally (Vav 10, 14) any sixty years old believer (*jai-th*) and anyone knowing both the Thāna and the Samavāya (*suya-th*). The facilitations referred to by Vav 5, 17f; 8, 5 doubtlessly apply to older people. With regard to the expression of *thera therā-bhūmi-ṣatta* Vav. 5, 17f, 8. 5) it appears that the quality as *thera* must be explicitly acknowledged

§142. By force of the fifth vow (§171) the monk is unpropertied. The objects he needs do not pass for *ṣariggaha*; he uses them and has them for himself for reasons of piety and decency (Dasav 6, 20f). He receives them as alms, but he may not ask for them except within an orbit not exceeding 1-2 *joy*. (Āyār. II 96, 10, 102. 5), nor may he accept them other than in bright daylight (K. 1, 45f). It goes without saying that he is forbidden to buy, to borrow, to barter or, least of all, to steal them (comp Nis. 14, 1-4; 18, 21-24; 16, 25-29). The outfit (*bhaṇḍaga* Āyār. II 54, 18. 21) comprises with novices¹ in the beginning three (with females four) unmended garments, a hand-broom, an alms-bowl and a brush (*rayaharana-ṣaḍiggaha-gocchaga* K 3, 15f). After his being admitted the novice has as few and as bad clothes (*ahā-ṣariggahya*) as may be the case. The common formula *vattha, ṣāya, kambala, ṣāya-ṣuṇḥana* (e.g. K. 1, 39-41; Āyār. I 32, 26f; Dasav 6, 20) has a cloth instead of the brush. Neither sequence means to be exhaustive since also other objects (s b) are being quoted. In making

1. This is the *tap-ṣaḍhamayāe saṃṣavayamāna* K. 3 15.

allowance for the accessories of the alms-bowl Ohanijj. 668 ff. (comp. also a.o. Ācār. 251a) quotes 12 or 14 different parts for the monk and 25 for the nun. The former difference explains itself by the discrimination made between *jinakappiya* and *therakappiya*. They are two of the six stages (*kappa-ṭṭhi*, K. 6, 14—Thān. 167b; 371b; § 136) pertaining to the career of a monk. While the *therakappa* stands for the traditional membership of a *gaccha*, the monk of the *jina-k* of his own free will stands outside it living for himself and observing certain rules (comp. Sthān. 169a). This certainly goes back to the idea of imitating the *jina* which, however, is no longer intact at the time of our sources, since acc. to them the *jinakappiya* wears clothes (s b).

§143. The clothing (*vattha*, *cela*, *cīvara*, Ohanijj. 669 etc.: *pacchāga*) may be either of wool, hemp, linen, cotton or *tirīṭa* (*Symplocos racemosa*)-bark (K. 2, 29; Thān. 138a); Āyār. II 96, 2, 97, 15 does not refer to the fifth kind and divides the fourth into *khomiya* (allegedly *kārpāsika*) and *tūla-kada* (*arkatūl'ādi-nispanna*).¹ Nothing is being said as to the colour of the material which later comes to play an important part in the history of the Order (§ 26. 36). Under certain conditions even furs (*camma*) are admissible (K. 3, 3-6; Nis. 2, 22; 12, 5 (at variance with K. 3, 4), Vav. 8, 5; Āyār. II 106, 8 (comp. 77, 32). In this connexion we hear of *camma*-(*palī*)*ccheyanaga* and *c-kosaga* which, acc. to the comm., stand for strap or needle and respectively, shoes or pouches. Traces owing to wear and tear, rents, patches (*padiyānya*? Nis. 1, 47f.) of stains, of furs with the hair worn off in places, may not be repaired (K. 3, 7-10 Nis 2, 23f, Āyār. I 29, 19; 35, 26, etc.; II 96. 16). For further details concerning careful treatment see Āyār. II 5; Nis 18. The *cela-cūlminiyā* or *lyā* (K. 1, 18) serves for protection, whereas the *cūlminī* means a curtain for the nuns' quarters (K. 1, 14).

The monk, including the *jinakappiya* (Ohanijj. 669), is allowed to have three garments (K. 3, 15, the so-called *lalpatraya*; Āyār. I 35, 26), two of linen and one of wool (Sthān. 393b;

1. On the other hand *khomiya* (96, 25) ranges among the material forbidden for usage since it is too fine.

Ācār 251a). A young monk of a strong physical constitution will content himself with one only (Āyār II 96, 4) and an older one may confine himself to two, but in any case he will have to stick to the number chosen (ibid I, 36, 15; 37, 4). In the warm season he puts off his worn out clothes and goes, as the case may be, either as *santar'uttara*, as *oma-cūliya* or simply with the *sāda*, a cloth worn about the loins (ibid I 36, 1, etc.). The *therakappiya* monk, finally, is bound to wear also the *cola-patta* (Vīy 374b, Ohaniḥ 721f) which conceals his genitals.—The nun wears the *saṃghāḍī* of which she has four in all (K. 3, 16) to be worn on various occasions (Ācār. II 176, 5, comp. SBE 22, 157²), and all of different width (Āyār II 96, 6, Thān 186b) She is well secured by means of 11 pieces of clothing listed by Ohaniḥ 676f. (comp. Sādh. 23-36), while in older texts only some of them are referred to. They comprise 1. the boat-shaped bandage *oggaha¹-ṇantaḡa* and 2 the *oggahana-pattaḡa* covering it (see also K 3, 11 f.), 3 the two *addho'ruga*, loin cloths, 4 the *calanivā* a length of cloth reaching down to her knees, 5. the *abbhūntarā* and 6 the *bāhurā nyamsanyā*, the former reaching down to the middle of her thighs and the latter going about her loins to be tied up, 7. the unsewn *kancuḡa* for covering her breasts, 8. the *okacchiyā* covering her breasts and her back on her right side and fastened by a button on her left, 9 the *vekacchiyā* which covers the two preceding pieces, 10 the above mentioned four *saṃghāḍī* measuring from 2 to 4 *hasta* in length, and 11 the *khandhakaraṇī* to cover the shoulders held by means of the *khujjakaraṇī* —A wollen cloth which may be worn by either sex, is the *kambala* (Dāsav. 6, 20 8, 17).

§144 The alms-bowl is called *paḍiggahā(ga)*² or *pāya*, two names which are mutually exclusives.³ In the *jṇa-kappa* there is but one (Ohaniḥ. 679) as is for a young strong monk (Āyār II 102, 3). Where (as in the *thera-k.*) we have two, the other one is called *mattaga*, and Ācār. 368a shows

1. Simplified form of *oggahana nantaḡa* also in *sikkaga-ṇ* Nis 1, 13

2 Skt frequently *patad-graka*, but Pkt never *paḍaggaha*

3 Comp Āyār II, 102, 1-103, 22 and 103, 23 ff (26 -hagaṇ Mss) along with Nis 14 and variants

that both are carried one on top of the other (in the *saṃghātaka*) as is still the case to-day, the one intended for solid and the other for liquid alms. Anyone destitute for one reason or the other may have a third bowl (Nis. 14, 6).¹ These bowls either consist of a gourd (K. 5, 41f.) or else they are made of wood or clay (Āyār II 102, 2; Thān 138a; Nis first 1, 39). Accessories are (Ohanijj 668, 676, 693 ff.) *bandha*, the cord by which to carry the bowl, *thavana*, its foot (or its saucer ?), *kesariyā*, the dish-cloth,¹ in certain cases (K. 5, 53f) with a handle, *padalāṃ*, according to the season, 3, 5 or 7 linen cloths to cover both the bowl and the shoulders, *raya-ttāna*, the lid, *gocchaga*, the above mentioned brush (which acc. to Utt 26, 23 also serves for cleaning the clothes). Nis. 1, 41f. refers to the *tundiya* of the alms-bowl. It would, however, lead too far to give the measurements of the objects mentioned and of those to be mentioned presently.

A *mattaga* different from the one mentioned and existing in three types serves both monks and nuns for their excrements and as a spittoon during the rainy season preventing them from going out (K. 1, 16f). It probably equals the *kamadhaga* attributed to them by Ohanijj 675. Finally Ohanijj 713 f. refers to a *mattaya* as a means of fetching and carrying away things of sorts, though a *jina-kappiya* will not use it.

§145. The hand-broom, invariably referred to as *raya-harara* or *pāya-puṃchana*,² serves for clearing from living beings those places where something is to be laid down or where one wants to step on. Acc. to Ohanijj 710 it represents a specifically characteristic part of the outfit. It has (K. 2, 30 = Thān. 338b) fringes of either sheep or camel wool, hemp, *balbaja* grass (Eleusine indica) or reed, while its handle is made of wood to be covered with a different material (Nis 2, 1-8 generalized as compared with K. 5, 45f.). This cover consists of two strips of fabric called *nisadyā* (Sthān 339b). Acc. to Ohanijj 26 the *pāya-*

1. Explained by *pātraka-mukhavastrikā*.

2. This word appears to have been formed with *madhyama-lopa*, i. e. *pāda-nyāsa-puṃchana*. In considering the character of the text nothing is proved by Panhāv. 123 the words applying a side by side in the same comm.—For *rayaharara* comp. ZACHARIAE WZKM 16, 35ff

lehaniyā made of different kinds of wood is used instead of the *rayaharana* during the rainy season (Sthān. 356a).

Significant as is the hand-broom so is the napkin called *muha-pottiyā* (-*ṭatti*, -*ṭattiyā*), *m.-ṇantaga*; *mukha-vastrikā*. Acc. to Ohaṇṇ. 712 its purpose is first (and in accordance with its root *pū*) to wipe insects and dust which we know to be animate, off the face—this the old teaching after Drona's comm.—and, second, when occupied with cleaning within the house to prevent such beings from entering into both the mouth and the nose. It is characteristic of the Jains' dependence on Brahman models that the face-cloth unknown to the latter is not referred to in the sequences mentioned § 142, nor that it appears frequently at other places (Viy. 139a=Uvās. 77; Vivāgas. 38a; Panhāv. 123a; Utt. 26, 23, Nis. 4, 24). At any rate we are not told that it should be used when talking with a superior, as is done by the Sthānakvāsī to-day, nor, since cultic customs are not being dealt with, that it should be applied towards the sacred figure.

As to such objects not necessarily pertaining to the outfit, the *uvaggaha* as against the *oha* (Ohaṇṇ. 671, 23 ff.), the *camma*, *c -kosaga*, *c -ccheyāṇa*, and the *cilimilī* have been mentioned above already. Of the four *uttara-ṭatta* admitted two are the above mentioned *nisejjā* on the hand-broom, while the remaining two serve as blankets on the bed (*saṃthāra*, § 147). A further *ṭatta* is defined as *yogaṭṭaka* indicating that it was used for meditation or for ascetic positions. The passage referred to deals more widely with the *dandaga* and the *vidandaga*, the travelling-staffs for either the dry or the rainy seasons, and with the *laṭṭhi* (Āyār. I 43, 4), *laṭṭhiyā* (Āyār. II 77, 31; Viv. 8, 5) and *vilatṭhi*, which are applied differently and serve for protection, etc.

§146 Equipped with these objects monks and nuns are fit for participating in the life of the community. The rhythm of this life is controlled by the seasons. The rainless season (*udubadda-kāla*) comprising winter and summer each lasting for 4 months (*hemanta-gimhāo*) is opposed to the rainy season (*vāsāvāsā* or -*sa*) (comp. Uvav. 29). It obliges both monks and nuns to abstain from travelling from place to place (*gāmā-*

nugāmaṃ dūjjittae) and to remain at a permanent residence (K. 1, 36f; Nis. 10, 40-43) The Pajjosavanākappa which name is more precise than Sāmāyārī give the regulations concerning this 4 months' stationary life, the *pajjosavanā* According to an alleged custom of Mahāvira's and the early community they come into power within the time of one month and a half after the rains (Pajj. 1-8) since then the prepared houses are already damaged by occupation. This licence sanctioning a belated observation of the rainy season is not in harmony with the regulation referred to by Thān. 308b; Nis. 10, 40f. saying that travelling *paḍhama-pāusaṃsi* is forbidden unless exceptional cases—danger, famine and other afflictions of an outward nature—enforce it. By this word we are to understand the first month of the *prāṇs* consisting of Āsādha and Śrāvana which, again, means the first half of the rainy season altogether Travelling in this time (see again Thān. 308b) is allowed but for reasons of some inner spiritual need, e.g instruction failing to take place, etc. Walks may not exceed a certain distance (Pajj. 62). These restrictions expire 5 or 10 days after it has stopped raining (Āyār. II 82, 20, 25, Nis 2, 50).¹ This secluded way of living is necessary owing to the abundance of life which springs up in nature and which must not be damaged (Āyār. II 82, 1) For the same reason at all times greatest care must be taken when walking, and it is this care which, as a duty, takes the foremost place among the five circumspections (*samī*, § 173). In poetry the circumspect traveller appears in various characterizations (Āyār. 1 24, 9 ff), he must not run (Dasā 1, 1) nor is he allowed to be out at night or at dusk (K. 1, 47). In this respect Āyār II 3 provides most accurate prescriptions. We here but mention the way of how to behave when on water (see also Nis. 18) along with the manner of resting on river banks (K. 1, 19) and of crossing great streams (K. 4, 27, Nis. 12, 42, Thān. 308b). Unsafe and politically disturbed dis-

1. The end of the rainy season was celebrated acc to later sources Bhādrapada sudi 5, and tradition referring to the Jinacarīya (JACOBI, Kalpasūtra p 114 ff) calls it an exceptional event that Kālaka (§ 24) antedated this celebration by one day. Comp also § 213.

tracts should be avoided, and this warning may well be connected apart from others with the regulation that one should avoid visiting too often ten individually mentioned capital towns (Nis. 9, 19). Hence we see both monks and nuns leading a life of constant travelling, and we know of no permanent settlements. Nuns may not stay in close living communities (villages, etc.) for longer than four, monks not for longer than two months (K. 1, 6-9). We may assume that in most cases the time of their stay was much shorter, comp. the words *gāme ega-rāyā*, *nagare pañca-rāyā viharanti* in Uvav. 29. Busy places like a main street, a square or a bazar and public localities as, for instance, a guest-house, the roots of bamboo and trees (comp. Thān. 157a), may be chosen for quarters by monks only (K. 1, 12f 2, 11), and it goes without saying that the two sexes are not allowed to stay together in one house (K. 1, 27-30, exceptions Thān. 314a). For further regulations see Āyār. II 2; K. 1, 14 f. 31-34).

§147. By a certain formula, so it seems (Āyār. II 78, 8,¹ 106, 15; 108, 6), the monk introduces himself as a guest and asks the proprietor *sāgāriya*, occasionally *sāriya*) for a accommodation. This request concerns the *oggaha* of the host, i.e. the room of which he is the master.² So this word gave the name to the user granted by him for a limited time, the expression *ahālandam* denoting the shortest space in question. Several special cases are referred to by K. 1, 39-42; 3, 28-33; 35; Vav. 4, 20ff, 7, 20 23, 9, 43; the basic rule and a detailed casuistry in Āyār. II 7. Here we learn that the monk is bound to ask for the *oggaha* even for objects to be used temporarily only. The accommodation (*uvassaya*, Āyār. I 34, II: *āvāsaha*) does not merely serve for resting (*sejjā*) but equally for ascetic exercises (*thāna*) and either for meditation or studying (*nisīhiyā*). The resp. passages in Āyār. II 2, therefore, refer to all three cases; for the first and the third comp. also Āyār. II 8 and 9. For many reasons the quarters may not be shared by the host

1 Read *kāmaṇ*

2. Comp the *ogg* of celestial and terrestrial princes and proprietors Vīy 700a.

(*sāgāriya*, *sejjāyara*), his family and his servants, nor may they be visited by his animals, while, at least as far as nuns are concerned, they must not lie beyond the reach of his command (K. 1, 22ff; Āyār. II 72 ff). They may not contain any paintings (K. 1, 20 ff.), and their height must allow for standing in them either erect or at least somewhat bent (K. 4, 28-31) Supplies of grain, meat etc. which are kept there, must be locked up, quarters in which there are pitchers containing certain beverages or where either fire or light is burning at night may be taken up in cases of emergency only (K. 2, 1-10). It is doubtful whether during the rainy season the monk was allowed two supplementary quarters as a makeshift apart from his permanent one (comp. Pajj. 60).

The resting place (*sejjā*) consists in a shake-down (*saṃthāra*, *-raga*) of either dry grass or hay (Āyār. II 53, 1; *dabbha-s*. Vīy. 126b),¹ the above mentioned *uttara-patta* serving as a cover.² As is the case with some other objects (Nis. 1, 31-34; 5, 15-24), this *sejjā-saṃthāraga* is either lent to the monk for taking it away with him (*pādāhāriya*, also *paḍi-*) or else it remains with the host (*sāgāriya-santiya*), K. 3, 25-28; Nis. 2, 53-58; Vav. 8, 7-10, and it probably applies to the first case when the *s.* is counted among the additional outfit (§ 145). Before being placed back it has to be shaken up afresh (*avigaranam kattu* K. 3, 26). Though we are not informed as to how the *s.* was transported, it follows from Vav. 8, 2-4 that it may be light enough to be carried by one hand for five days and for one day at least during the rainy season. This difference in weight is probably due to the monk's then using a bench (*pīḍha*) or a plank (*phalaga*) instead of the *sejjā-s.*, and, accordingly, Pajj. 53 does not speak of a *sejjā-s* but of a *sejjāsaniya*³ Thān. 157a the "resting litter" is a stone or wooden plate used for self-castigation.

§148. Utt 26 supplies the description of a monk's routine duties, and by it of all others we shall let ourselves be

1. Here as well as in the Pannas the word has also the meaning of "death-bed".

2. This may account for the comm. giving *kambal'ādi* (a o in Utt. 17, 7) as an explanation

3. Read *sejjāsanyānam* in 53 with AB

guided in the course of the following. Day and night are divided into four equal parts (*porisī*, *porusī*),¹ their length changing according to the length of the day which, hence, has either 2, 3 or 4 *paya*. On days of rest and in the night the first and fourth *porisī* are for studying the sacred texts, the second is for meditating, whereas in the daytime the third is reserved to the monk's making his round for collecting alms and in the night to sleeping. Travelling is done in the first and second *por* of the day. Such is the ground-plan into which different duties of different kind are incorporated. As to the confession of offences, if any, committed during the night, we shall deal with them in § 159. Apart from it the beginning of the day and the morning hours, comp Utt 26, 22 ff, are devoted to examining both the utensils and one's own body, i.e. the monk most carefully examines (*paḍilehaī*) if anything animate (in the broadest sense and, hence, including dust particles) adheres to them, and what is found he removes (*paṃajjai*). This examination extends even to places where something was put off (comp K. 4, 11-13; 5, 11f, and as far as objects are concerned it is certainly not confined to those hours but is done at all times, especially so before using them (comp. Uvās 77; Vīy. 139a). While the monk is very punctilious in carrying out all this, he takes no heed of physical culture. The regulations concerning the act of dejection referred to by Āyār II 10 cannot be counted among this point of the matter since they do not relate to the cleanliness of the performer, but to that of the locality. Acc. to Nīs 3 4 6 11. 15. 17 the monk is forbidden both to oil and to wash his limbs,² he must abstain from treating wounds or eczema, nor is he allowed to rid himself of vermin, to cut either his nails or little hair, and to brush his teeth. He may not even have these benefactions carried out on him by a fellow monk, let alone by a dissenter or any profane person, as little as he may carry them out on him. So then, as indicated by Āyār. II 74, 13, the presence of a monk may be scarcely

1. Comp JACOBI ZDMG 74, 256 etc

2. Comp the nun Bhūyā Pupphacūl 77a and Utt 2, 3 f.

bearable.¹ Curiously enough Āyār. II 13. 14 is more indulgent in this point in allowing such favours being done by someone else (*para*) or, mutually, by two monks, provided that the receiver of such favour neither asks for nor refuses it—though a mutual service of this kind is difficult to imagine. K. 5, 50f accordingly fails to refer to such cases, and the restrictions given lie in a different field.

Among the duties starting the daily routine we have, furthermore, the monk's reporting to his superior who, in cases, gives his orders. For the monk is bound to serve him as well as anyone superior to himself (*thera*), comp. K. 3, 21, if it be only by assisting him in rising from a seat or sitting down, in cleaning his things or in removing garbage (comp. K. 4, 26). This equally applies to the countenance he lends to the sick (*gilāna*) (comp. Nis. 10. 38f) or to those weakened by castigation (*tavassi*). On the other hand the master and teacher is equally bound by obligations towards his pupil (*seha*). Thus the members of the community are interconnected by services (*veyāvacca*, *veyāvaḍḍiyā*, *kukamma*). This is expressed not only by the personal kinds of the *vey* mentioned above but also by the impersonal ones of the *kula*-, *gana*- and *saṃgha-vey*. All 10 are referred to by Uvav. 30 III, Vav 10, 34, Thān. 473b.

§149. The modes of deportment which may be added here, are attuned to the note of decency, sociability and consideration. Even a slight indication of harshness is punishable (Nis. 2, 18, 13, 13-16; 15, 1-4) Ebullitions are called *asamāhi*, disrespectfulness is known as *āsāyanā*; of the former we have 20 kinds, of the latter 33 (Dasā 1 and 3) The monk is obliged to behave in a strictly reserved and unobtrusive manner; when found singing, dancing, making music, imitating animal voices, laughing and disguising himself he is liable to prosecution (Nis. 4, 27, 11, 64-70, 17, 134-138) The reserve he exercises towards dissenters and profane persons (*annautthiya* and *gārautthiya*) quite naturally goes back to different causes No more

¹ The filth (*mala*) on the body of the *ācārya* Hemacandra brought him and his sect the honorary name of *Maladhārin* PETERSON, Third Report p 274 (See HLRTTEL, Pāla and Gopāla p 150)

than he may call in their help is he allowed to render them a service or any other kind assistance, comp. Nis. at various places. This also applies to laymen (§ 163).

His behaviour towards the teacher is determined by the *vinaya*. According to Uvav 30 II; Thān 407b the *vinaya* concerns both something abstract and concrete to a wide extent; as deference, reverence and respect it is of a positive quality, whereas as restraint from and rejection of bad profane things (*apasattha*) it is negative. The way how to deport himself, and especially so in front of his teacher and master, is plastically demonstrated by Dasav. 9. The tribute externally paid to him is the *vandana* which has been given its place also among the resp. formulae necessary (*āvassaya*, § 151)¹ It comprises two bows accompanied by a certain phrase as well as by certain movements and it has to be performed in the monk's normal outfit. This is obligatory for some acts, especially so for the act of confession and during instruction, and, what is more, four or, resp., three times, though it may equally be exercised on other occasions. LEUMANN Übersicht p. 11 ff refers to it in detail by the name of the *kukakṣma* which acc. to Āv. 12, comp also Samav. 21 b, means the same.

§150. As mentioned above and acc. to Utt. 26, 12 the the first and fourth *porisī* at day and at night are assigned to instruction (*sajjhāya*) The statements made by Nis. 19, 8; Thān 213 b are more detailed and yet less accurate. They forbid lessons at dawn and at dusk, at noon² and at midnight, and Thān. allows them in the morning and in the afternoon (*puvvanhe* and *avarānhe*), at or probably until—nightfall (*paose*) and at—or probably from—daybreak (*paccūse*). Holidays are constituted by the festivals (*maha*) in honour of Indra and Skanda, of a Yakṣa or a Bhūta (Nis 19, 11). Acc. to Thān.

¹ In the Mahānis (the AUTHOR p 82f) we are told of monks who owing to offences were unworthy for some time of accepting a salute (*avanda*, *avandanīya*) This obviously applies to the salutation of monks among themselves

² *majjhanhe* with Thān Nis has *avarānhe* which is obviously incorrect since in Thān this means an allowed time *puvvanha* and *avarāṇha* are supposed to be the first or, resp. the last *prahara* (= *paya*, § 148) of the day

213b the *pāḍivaya* of the Inda-maha is the full moon-day in Āśvina; further *pāḍ.* are those of the Āsādhā, Kārttika and Sug-rīṣma (Caitra); Nis. 19, 12 has the *pāḍ.* of the Bhādrapada instead of the Inda-maha referred to in 11. The hours assigned to the *sajjh.* must be punctually observed and hours not assigned to that purpose (*asajjhāya*) may not be used for it (Vav. 7, 10-14; Nis. 19, 8. 13-16). Acc. to Thān. 475b an *asajjhāya* may also be caused by certain phenomena, e.g. thunder and lightning, northern lights=aurora borealis (*disi-dāha*), dustfall (*raya-ugghāva*), lunar and solar eclipses and the miraculous appearance called *jakkh'ālitta*, but just as well by the death of a person of high standing (*paḍana*), war (*rāya-vuggaha*), a dead person within the house or else by lumps of meat, blood, bones, and excrements lying close by thus adding the spacial to the temporal point of view.¹ The place of instruction is called *nisīhiyā*, and its requisites referred to by Āyār II 2 (§ 147) are in conformity with those pertaining to the quarters as such. As demonstrated by Āyār. II 112, 11 the pupils go there in groups but careful of not coming too close to one another. From the way the instruction is performed (*sajjhāyaṃ uddisittae, samud-disittae*) we learn that the pupil—occasionally called *sissa, sissinī*—recites the text (*vāyanā*), puts questions about it (*paḍipucchanā*) and repeats it (*pariyattanā*), whereupon it is examined for its deeper meaning (*anuppehā*, comp Utt. 29, 22), and finally we have some exemplary or theoretical considerations regarding the Dharma, the *dhamma-kahā*, see Uvav 30 IV; Thān 349a (not in Nis. 5. 5-11). Āyār. II 55, 9 etc. has *dhammānuoga-cintā* instead, a reflection on the Dharma, whereas *dhamma-kahā* stands for the sermon delivered by the teacher. From Thān. 210a we know that as *akkhevanī* it develops the teaching from within itself,² that as *vikkhevanī* it contrasts it with non-Jain teachings, that as *saṃveganī* it promotes piety, and that

1. In Āv. 18 the *asajjhāya* is given a special treatment.

2. Āyāra, Vavahāra, Pannatti (i.e. Vīy) and Diṭṭhivāya represent the Canon. Acc. to another conception the first three words do not mean texts but notions. But comp. Dasav. 8, 49

as *nivveyaṇī* it effects melancholy Rhetorical means of the sermon are the narrations of similes or *naya*. Their theory represented by Thān. 253b; Dasav. nijj. 53-88 was treated by LEUMANN ZDMG 49, 602 ff¹ The *vāyaṇā* (as is equally said of the whole) is directed by the *uvajjhāya*, though Vav. 10, 12 speaks of the *uddesaṇ'āyariya* and the *vāyaṇāyariya*. The words *hetthilla* and *uvarima* used in connexion with portions of the texts (Nis. 19, 17f) may, perhaps, show that a manuscript served as a base for instruction referring to its passages by "see above" and "see below". Reciting must be done with understanding, with accuracy, and by strictly observing the right sequence; want of self-possession and reliability is detrimental to the qualification for teaching, the teacher must be just in calling up pupils who may not speak without being asked to do so, and they are allowed but a limited number of questions (Vav. 5, 15-18; Nis. 19, 19-24). Outsiders and such having isolated themselves are not admitted to instruction (§142, Nis. 19, 25-28), nor are unsociable and inattentive monks (K 4, 5=Thān. 165b—comp. § 156—, extended 246b). He who commands a portion of the text is given the permission by the teacher (*anunnā, anuṇāṇe*) to pass it on to others

§151. In later texts we find the *porisī* assigned to studying being distinguished into *sutta-porisī* and *attha-p.* according as a text is treated by the *uvajjhāya* relative to its wording and by the *āyariya* with respect to its deeper meaning. Hence in the Mahānis and outside the Canon we frequently read about the *giyattha* in the sense of a thoroughly instructed monk. As now concerns the subject of instruction we have already mentioned (§ 40) the regular (*kāliya*) and irregular (*ukkāliya*) line of texts This is the discrimination made with works not pertaining to the Anga (*anangapavatttha* or *anga-bāhira*), provided they are no Āvassaya. By it, however, we understand, as indicated by the name, certain formulae which "necessarily" have to be known, and, what is more, from the very moment a monks start on his monastic career, since the novitiate is

¹ The subject was taken up by the AUTHOR in *Studia Indologica* (Festschrift KIRFEL 1955) p 297-319

characterized by the name of the first Āvassaya (§ 136). This 1st Āv. is called *Sāmaṇya*, a short vow to be brought to one's mind repeatedly during the day (§ 170) for promising to shun for life all that is blamable in thoughts, words and deeds as well as in all one has personally caused and approved of. The 2nd Āv., called *Cauvīsattḥava*, is a hymnical prayer of seven stanzas to the 24 Tittḥagaras. The 3rd place is taken by the *Vandanaga*, the formula of respectfully addressing a superior by touching his feet with one's hands followed by a humble request for indulgence (*khamemi*) towards offences committed during the day or the night. This formula contains the words of *āvassiya* and *nsīhiyā* (mentioned § 136) by which a monk unobtrusively announces his due leaving and entering to the place and those being present.¹ The 4th, called the *Paḍikkamaṇa*, is the formula used at confession. The 5th, the *Kāussagga*, introduces the low devotion (§ 161) and demands an attitude of complete immobility for the duration of one Namaskāra except for involuntary and insignificant movements like breathing, coughing and physical secreting. Finally and 6th we have the *Paccakkhāna*, expressing different modes of refusing food and drink.² Owing to individual versions of the 1st and the 4th laymen equally share in the *Āvassaya* (§ 164), and this is likely to account for the *agāra*- and *anagāra-sāmāya* (Tḥān 64b). As profusely the Āv. was treated in later literature (for which LEUMANN, comp. § 4, rendered an eloquent testimony,³ as scantily it is referred to in the Canon. We have its wording not otherwise than embedded in the explaining works; Utt. 29 No. 8-13 gives but the names and Vīy. 466b.; 758b but the Āvassaya group as a whole.

§152. The time devoted to studies is followed by meditation (*jhāna*) to be dealt with in § 180. So far as either draws upon the night, we read about the *dhmma-jāgarīyā* (K. 1, 19 v. 1). To be awake (*jāgarīyatta*), as says Mahāvīra Vīy. 557b,

¹ LEUMANN, Übersicht p. 9b f. where also the derivation from *m-ṣid*—with abnormal aspiration—is being made probable.

² For *pacc* in its ethical respects see § 173.

³ Comp. also his lecture Xth OC II, 1, 125.

is good for those that have the *dharmā*; all others should rather apply themselves to sleeping (*suttatta*), since in this state—as well as in that of weakness and sloth—they will do nothing bad. The life of the pious layman equally includes wakefulness as is demonstrated by the episode with Sankha (Viy. 552b). His wakefulness (*sudakkhu-jāgara*) goes together with that of the monk (*abuddha-j*) and of the Arhat (*buddha-j.*).

§153. The third *porisī* of the day is reserved to the monk's round for collecting food and drink (*bhikkhāriyā*). It does not take place—nor do rounds for other purposes—in case of heavy rainfall, fog, or dust-wind or when insects are swarming (Āyār. II 54, 25), just as it may be dispensed with if certain reasons ask for doing so (Utt. 26, 35). For his round the monk is allowed a range (*oggaha*) of $1\frac{1}{2}$ *joy*. in radius, though in the rainy season this range will be limited by a larger river (K. 3, 35; Pajj. 9-13). What of alms he receives must be consumed within $\frac{1}{2}$ *joy* (K. 4, 11; Viy. 291b—Nis. 12, 30: comp Utt. 26, 36). Newly occupied villages, especially such where metal is being hammered, must be shunned (Nis. 5, 34). Only respectable houses in contrast to the *thavana-kula* (Nis. 4, 22) may be visited (Āyār. II 51, 26). As to the order in which these visits have to succeed one another there are 6-8 different methods, accordingly the way may be chosen by either walking it in a quadrangle, in a zigzag line or in a spiral, etc. (Dasā 7, 1 4. Thān. 365b; Utt. 30, 19. 26)¹. But the monk may just as well go from house to house, and thanks to such a *ghara-samudāna* Viy. 139a) he may receive a *samudāniya* (or *sām.*) *pindavāya* (Āyār. II 53, 26. 29; Uvas. 77).² He is obliged to display a modest behaviour and to give precedence to other receivers (Āyār. II 57, 25, 52, 10), in Mahāvīra's praxis even to animals³ (Āyār. I 44, 8ff). Once turned away from the door he may not return there for a second time (Nis. 3, 13).

1 The word of *vī-pantha* occurring only in Viy. 495b equally seems to refer to the round for alms as a way going forwards and backwards like that of a wave.

2. For an explanation see HOERNLE's ann. 146. But his spelling of *samuddāniya* is unacceptable.

3. Comp also the *sāṇa-vaṇimaga* Thāṇ. 341 b.

He must never stay long at one place nor stand in a lax way, and he is not allowed either to be inquisitive or to recite long quotations from the texts (K. 3, 22-24; Āyār. II 58, 28; 59, 1).¹

Āyār. II 1 and Dasav. 5 contain many more details to which we cannot refer here, and it is especially in the latter section that we gain an insight into the deficiencies of human nature.² The cleanliness and, for this reason, the edibility of the alms (*phāsuya*³ *esanijja*) have been treated in summarizing representation of the Pindanijutti. The different qualities making them to become unacceptable—and they are so even in case of doubt (Āyār. II 54, 13)—are there indicated as 15 or 16 *uggama-dosa* or mistakes on the side of the giver, 16 *uppāyana-d.* or ill-gotten acquisition of the receiver, 10 *gahaṇ'esanā-d.* and as either 4 or 5 *ghāsa-* or *paribhog'esanā-d.* or unclean condition and application.⁴ For these expressions compare Thān. 159a, 320a, 487a; Pindanijj. v. 129ff. Some of the 46 (Pindanijj. 659; Sthān. 159b)⁵ appear in the following on the ground of the earlier texts. Viy. 291 b already says that greedily eaten food is called *saṅgāla*, food eaten in a state of anger *sadhūma*, and food improved by admixtures *saṃjayaṇā-dosa-duṭṭha*. These are three of the *ghās'esanā-dosa*.

§154. The person of the giver—mostly a woman as may be concluded from Dasav. 5, 28, etc —is in the first line affected by the prohibition of the *sāgāriya-piṇḍa*. He who accommodates a monk may not equally treat him to food and drink (Āyār. II 78, 12; Nis. 2, 46-48, Dasā 2, 11; Viy. 231a; Dasav. 3, 5), though what of alms he gives may be accepted for the benefit of one who is ill or otherwise prevented from doing his begging round, and also for the teacher acc. to Viy. 374a (*dāveṭ*, K. 2, 19-28, Vav. 9, 1-30, 36-39; Pajj 14-16) Weak and ill monks

1. The beggars in general (*bhikkhāga*) owing to their swarming in all directions are compared with fishes (Thān 341 b) and owing to their obtrusiveness of different intensity with worms (*ghuṇa*) (ibid 185 b) eating up the outer or inner bark of a tree, its wood or its pith

2. Comp the AUTHOR, Dasav p VII.

3 *sparsuka* (LEUMANN), not *prāsuka*, as tradition will have it.

4 Comp JACOBI SBE 45, 131 ff. after the Dīpikā on Utt 24, 12.

5 Gunaṭatna in his comm to Haribhadra's Śaḍdarśanasamuccaya speaks of 32 *antarāya* and 14 *mala* (ed SUALI p 112. 1).

are treated with consideration not only in point of food (K. 5, 49-52; Thān. 138a) but also in general respects (K. 3, 22; 5, 47f; Vav. 2, 6, Nis 10, 36-39; Āyār. I 36, 22) Nor is a monk allowed to accept any alms given by a prince or his retinue, the *rāya-pinda* (Āyār. II 54, 53)¹, Nis. 9, 1-6; 8, 13-15; Viy. 231a, Dasav 3, 2). As is demonstrated in detail by Nis. 4, 1-6, 9, 7ff the monks must not enter into relations with potentates, and, accordingly, Āyār. II 83, 16, K. 1, 38; Nis. 11, 71 forbid their come and go in anarchic provinces and times in order that all complications be avoided² Some exceptions are referred to by Thān. 311b Even he who lives in the woods or passes them in travelling may not contribute to their sustenance (Nis 16, 12), and this probably accounts for the *kantāra-bhatta* (Viy. 231a, Uvav. 96 III). The alms, above all, must not be prepared in advance, neither for receivers of alms his general (*āhākamma*³) nor for him personally who is expected to ask for them (*uddesiya*), no more than they may be sent for (*abhihaḍa*) or bought (*kīya-gaḍa*) or set aside from one's own meal (*ceya* K. 2, 25-28, Dasā 2, 4, Nis. 10, 4, Āyār. I 36, 20, II 50, 20; Dasav. 3, 2). There is danger of such alms being offered when the monk calls on relatives or acquaintances (*nāya-viṇṇa* ei, Vav. 6, 1, Dasā 6 XI, Āyār. II 55. 30, 65, 10) or when attending a public feeding (*saṃkhaḍi* Āyār. II 52, 19; Nis. 3, 14). Nor may he visit a house where he is sure to get some (*nutiya pinda*) or a certain part of the meal (Āyār. II 61, 6, 56, 16, Nis 2, 32-36). The substance of the alms—in correspondence with the component parts of a modern Hindu meal—may consist (comp. Thān 219b) in a main course (*asana*), liquids (*pāna*), sweets (*khāima*) and spices (*sāima*). As a matter of course it

1. Comp against this ibd 51, 28

2. For the expressions of *verajja-viruddha-rajja* etc comp NN LAW IHQ 1, 383-397 —Talks about the public procession and the display of power by princely persons (*rāyā-kahā*, Thān 201 a) pertain to this subject, but partly also to the general talks (*vikahā*) about women, food and drink, and about the morals of other countries (Thān. 209 b, extended in 403b) They do not help the monk or the nun to profit by them, but, on the contrary, they help to bring them off the right path (Thān. 221 a)

3. Acc to LEUMANN ZDMG 37, 495=*yāthākāmya* The Skt. transcription invariably has *ādhākarma* For the Karman sequence regarding the eating of *āh.* comp. Viy. 101 b=314 b.

must be of course free of life⁴ (comp. Āyār. II 50, 1; 63, 5; K. 1, 1ff.; Nis. 15, 5-12; 16, 4-11; Dasav. 5, 2, 14-24). These passages and others refer to vegetables and fruit only, but it is evident that meat and fish in a live state were not less forbidden. Whether or not they were allowed to be eaten in a lifeless condition is a matter of interpretation. The vegetarian standpoint is strongly maintained.² Thus the words *bahu-y-atthiya maṃsa* and *bahukantaga maccha* or *animisa* are meant to indicate a "flesh" of fruit and fish interspersed with kernels and stings. On the other hand we learn from Āyār. II 65, 33 (=II 1, 9, 3: Ācār. 321a) that in the interest of a sick monk or nun some meat or fish just being prepared for a guest may be asked for by a monk passing incidentally. In the case of Āyār. II 67, 23 (=II 1, 10, 5) acc. to the Cunni (344b) a layman or a lay woman must not rebuke a monk asking for meat or fish for the same medical reason. And Dasav.-cunni (184 b) as well as Haribhadra (Dasav.-ṭikā 176 b) would not have justified Sūtra 5, 1, 73 by referring to peculiar circumstances (*kaṃci kālāṃ desaṃ paḍucca*, resp. *kāl'ādy-apekṣayā*) if cases of non-vegetarianism were considered to have been totally excluded in those remote times. But, of course, the old scholiasts are anxious to put aside the literal meaning of *maṃsa* and *maccha* in favour of the metaphorical one as fruit or trees, and Śīlāṅka (Ācār. 323 b) goes to the length of taking them as prescribed by an able surgeon for exterior application (!) to cure a cutaneous eruption.

As follows from Sūy. I 2, 2, 18-20; 3, 3, 12; 3, 4, 1-4; 7, 12; Āyār. I 3, 20-23, etc. the monk may neither drink nor use cold water, i.e. water in its natural state. It must be boiled and is then called *udaga-viyaḍa* (K, Nis., Āyār. II, etc.). Even externally no live matter may adhere to the food, comp. Āyār. II 49, 1, and it must not stand on natural ground (Āyār. II 61,

1. Hence *maḍḍā* (*mṛtādīn*) *nayantha* Viy 110 b.

2. KAPADIA Rev Phil Rel 4 (1933), 2 p. 232-239 apart from his own scholarly deductions reproduced a letter of JACOBI's trying to solve the problem in a most ingenious manner.

10, 28; 60, 5; Nis. 17, 126-129). Another important question is whether the vessel or the hands of either the giver or the receiver of the food or the beverage are moist (*samsaṭṭha*, Āyār. II 59, 5; Dasav 5, 1, 31-36) or not. This leads to establish 7 different ways of how the monk must have alms being given to him (*ṇṇḍ'esanā*, *ṇṇān'es*. Āyār. II 69, 7, Thān. 385 b).

§155 What food has been received on a round for alms (*ṇṇḍavāya*) must be shown to the Guru (Āyār. II 67, 4; Dasav. 5, 2, 31) and it must be sufficient for the needs of a healthy person, while only he who feels weak (*no saṁtharat*) may repeat the round (K. 5, 54, Dasav 5, 22), as a nun may a when having received but very little, a *ṇṇulāga-bhatta*, as the figurative expression has it 32 bits (*kavala*) of egg size are considered a normal quantity (Viy 292a—Uvav 30 II—Vav. 8, 18). As was pointed out above, the round may be done but once in a day, during the 3rd *ṇṇorisi*, and what has been received must be consumed within a certain spacial and, hence, also temporal limit.¹ To receive food in the dark is forbidden by K. 1, 43, and it is out of the question to consume it as *rāi-bhoyana* (§ 171), comp. K. 5, 6-91, nor is it allowed to keep it for the next day (K. 5, 49) except in cases of heavy illness. But yet K. 4, 11—Nis. 12, 30 and Viy. 291b refer to food received during the 1st *ṇṇorisi*, i e in the morning. It remains but to assume that in this case it was brought to the monk² and this must equally apply to such food as was accepted before sunrise and consumed after it (Viy 291 b). That there is an early meal is also demonstrated by calling certain fastings by the name of *cauttha-bhatta* and the like (§ 156).

§156. Uvav. § 30 III; Sūy. II 2, 72; Thān 296a f. quote a large number of different methods as to how food may be asked for and taken by a monk. The acceptance of either the one or the other of these methods appertains to the province of asceticism or self-castigation to which we now proceed. Physical asceticism (§ 178) is known to concern, for its greater

¹ It is not said that what has been received must be eaten while standing. This is the case with the Dig (*stṇṇiti-bhoyana*, also *ubbh'asapa* etc. Chapp 1, 14 = *ūrḇhāṇana*, comm erroneously *udbha-bhoyana*)

² This is implied by *ānīta* Sādhudmakṛtya 277 (§ 201a).

part, eating and drinking. There are but few methods occurring apart from those quoted in the texts. The *saṃkha-dattiya* confine themselves to a certain number of ways regarding the reception (*datti*,¹ Vav. 9, 40) of food and drink. Those among them observing the *java-majjhā* and the *vaira-majjhā canda-paḍimā* (Vav. 10, 1; Thāṇ. 64b) follow the example given by the waxing and waning moon. Starting with 1 *datti* on the 1st day of the bright half of the month the former take 1 *d.* more every day for a fortnight's time proceeding up to 15 *d.* taken on full moon day and then to decrease the *d.* in the same way. In the *vaira-m. c.-p.* the number of *d.* increases during the dark half of the month to decrease during its bright half, so that here the lowest point or the state of contraction fall on full moon, while there it is the highest point or the state of expansion that do so, and hence the names. *paḍimā* in the frequent usage of the word²—as Samav. 96a wants it there are 92 *paḍ.* in all—is explained by *abhigraha*. By Thāṇa 64b; 195a we come to know them as interior (*samāhi-p.*) and exterior (*uvahāna-p.*) ones. Other exercises do not proceed from day to day but at a much slower pace. They take 7 times 7, 8 times 8, 9 times 9 or 10 times 10 days and are accordingly called *satta-sattamiyā* etc. *bhikkhupaḍimā* Vav. 9, 31-34; Thāṇ. 385b; 440a; 518b. During the first 7, 8, 9 or 10 days 1 *datti* is taken daily, during the second 2 daily, etc. so that all *d.* sum up to 196, 288, 405 or 650. All these methods already positively concern the quantity and would therefore, come under the *omoyariyā* or the restriction of food. Uvav. § 30 II=Viy. 292a=Vav. 8, 16 here quotes that instead of 32 morsels one takes but 31, 24, 16, 12 or 8, or that either one diminishes each figure by 1. As against that the *anasana*, as far as it is only temporary (*uttariya*),³ consists in the dropping of the meals. If one half of the day remains without a meal being taken we have the *egâsana* fasting, and in case it be the first half we have the *purim'addha* (comp. § 161).

¹ *dattih sakṛt-prakṣepa-lakṣanā, eka-kṣepa-bhikkṣā-l.* comm In doing so *bhikkhā* Vav 9 31-34 is unprecisely equated with *kavala* Sthān 65 b.

² And equally so with the 91 *para-veyāvacca-kamma-paḍimā* Samav. 95a.

³ For fasting leading to death (*āvakahya*) see § 165.

cauttha-bhattiya, *chaṭṭha-bh*, *atthama-bh*, etc. is called he who refuses to take food until the 4th, 6th, 8th, etc. meal, i.e. who spends $1\frac{1}{2}$, $2\frac{1}{2}$ $3\frac{1}{2}$, etc. days by fasting, though he may take certain drinks differing as the case may be (Ṭhān 147a). The *moya-padimā* (Vav. 9, 35, and comm. Ṭhān. 64b; Uvav. 24) as a "small one" lasts $6\frac{1}{2}$ as a "large one" $7\frac{1}{2}$ days; for both of them the drinking of urine (*mokaṃ kāyikī*) was obligatory.¹ Either was reserved for monks of a strong constitution at the beginning or the end of the hot season. The *cauttha*- etc. fastings are arranged in artificial systems and sequences. We find their names in Uvav. 24, Than. 292a, while the ways as to how most of them and some others are being practised are referred to in Antag 8.² The *kanag'āvalī*, for instance, appears as follows 4 (abbreviation for *cauttha*, the following accordingly); 6; 8; 8 times 8, 4 up to 34, 34 times 8, 34 down to 4; 8 times 8. 8; 6; 4 This sums up to 522 days in all. Moreover we have the "short" *savvaobhadda-padimā* of 100 and the "long" *s-p.* of 245, the "short" *sīha-nikkīliya* of 187 and the "long" *s.-n.* of 462 days apart from several more up to the *rajan'āvalī* of 472 days. In all cases, however, the individual fastings are interrupted by times of recreation (*savva-kāma-guṇiyam pāre*). The female ascetics of the Antag carry out such fastings four times each in succession and in connexion with the changes as to the contents of the meals allowed to them (see below). By ascetic positions (§ 157), however, the *gunarayana-saṃvacchara* cycle of 16 months' duration is intensified and the way they act upon the fasting Khandaga is illustrated by Vīy 123b, comp also Antag in BARNETT on p 56. The third aspect of asceticism in eating and drinking is the change of food, of which Uvav. § 30 1V gives nine different kinds (comp also Ṭhān. 296a) by the name of *rasa-pariccāga*. We here point out the abstention from the 10 *vigaṇi*, i.e. milk and its products *dahi*, *sappi*, *navaniya*, *ghaya*, oil, fat, honey, meat and marrow (Ṭhān. 204 b, 450 b). Accordingly we speak of the *nivvīya*.³ We are

1 Malayagiri's *āḷātavyam* in the AUTHOR'S ed of Vav p. 32 ult. is wrong for *āpātavyam* (= *āyauve* of the Sūtra)

2. Comp also BARNETT, Antag. p 98ff.

3 For *nivvīya*=*nivvīkṛtika*.

told that he who is not able to brace himself upto this abstention (*vigai-padibaddha*) may attend lessons no more than he who is illmannered (*aviniya*) or unsociable (*aviosaviya-pāhuda*, K. 4, 5). But *vikrti* here certainly stands for "ill-humour", and what is meant is a monk of moods easily getting out of tune. The *āyambūliya* owing to his disposition to sourness has to content himself with eating the sour porridge called *āyambūla*.¹ The words of *panta* and *lūha āhāra* are, so it seems, expressions of general meaning denoting old and, hence, dry leftovers.

§157. According to their time of duration we have 12 different *bhikkhu-paḍimā* referred to by Samav. 21b and illustrated by Dasā 7. The first seven last 1 to 7 months (*māsiyā, dom., tem., etc. bh.-p.*), the 8th to the 10th 7 days, the 11th is *aho-raṁḍiyā*, the 12th *egarāiyā*. For the seven month's *paḍimā* the principle of *jettiyā māsā jettiyā dattio* (§ 156) as to solid and liquid food prevails. For the one month's *p.* we have an additional number of complicating regulations. The shorter they are the more the strains grow in that certain ascetic positions (see below) preceded by a *cauttha-* to an *atthama-bhatta* become obligatory. For doing so the monk (see also Thān. 147b) who carries out the 12th *paḍimā* after a 3½ days' fasting without taking any liquid food, i.e. continuing outside as village for one night with his body slightly bent forward (*isim pabbhāra-gaenam kāenam*), his eyes fixed on an object, his feet close together, his arms hanging down, is rewarded with attaining the three supersensual forms of cognition (§ 78), while if he fails he is doomed either to madness, long illness or apostasy. Anyone performing one of these *paḍimā* does not take part in the life of the Gana, he is an *egalla-vihāri* (Vav. 1, 25-27). It goes without saying that only a deserving monk will have the teacher's permission for doing so (Thān. 416a). For the modes of expression he is allowed to apply see § 74.

The repeatedly quoted positions are listed in Uvav. § 30 V; Thān. 387b among the *kāya-kilesa* which form another component part of asceticism. The general expression applied

1. For derivation see BARNETT, Antag p 99 PISCHEL, Gr §137.

by Āyār. II 2 preceding *sejjā* and *nisihīyā* is *thāna* (*thānaṃ thāi, thānāya*). The positions are 1 lying: *uttānaya*, *uttāna-sāi* stretched out on the ground, *pāsillaga* sidewise, *dand'āyaya* with feet outstretched, *laganda-sāi* with hollow back. Then follows 2. the squatting position with the *vīr'āsaniya* and *ukkuḍuya*. Acc to Thān 300b the latter is a sitting position, i e. one of the 5 kinds of the *nesajjiya* among which we have also the *godohiya* (Dasā 7). The above mentioned performer of the 12th *padimā* and others mortify their flesh in standing erect as do those who stare into the sun with one foot lifted up and both arms raised (K. 5, 22) *āyāvanāe āyāvettae* here refers to one exposing himself to the blazing sun,¹ comp. *āyāvaga* Uvav. and Thān. The *avāuda* exposes himself to the cold, the *akanduyaga* to insects (comp. Āyār I 41, 21) and the *anittthubhaga* refrains from spitting, a habit probably popular already in those days. The nuns (K. 5, 19-34) are allowed to exercise physical asceticism to a very small extent only. When exposing themselves to the blazing sun they may do so only by wearing not more than 1 *saṃghāḍi* and by standing on a level ground within the enclosure of their quarters.

§158. Voluntary asceticism has some points of contact with the compulsory forced upon a monk for punishment. Punishment is the consequence of guilt, and guilt, as § 168 will show, is something leaving the path of truth, hence being called *māyā*; *māi* he who has made himself guilty, *saṃphāsai māittthānaṃ*² A monk caught in three *māi-tthāna* in the course of one month and in ten in the course of one year makes himself guilty of *sabala* (Dasā 2, 20). We have 21 *sabala* which, acc. to Dasā 2, Samav 32a, range among gross offences, whereas the 20 *asamāhi* (Dasā 1; Samav. 37b) are considered acts of rashness rather than of calculation. Improper behaviour towards an older monk is gathered up in 33 cases called *āsāyanā* (Dasā 3; Samav 58b). A sin not confessed is a *salla* (§168, Mahānis. 1, 16; comp. Utt 26, 24)

¹ The translation K. 5, 22f must be corrected

² I e *māyī-sthānam*, neither *māṭṭ-sth* (Śīlāṅka on Āyār II, 53, 27) nor *māyā-sth* (JACOBI on Sūy I, 9, 25).

For instituting further proceedings every offence committed by oneself (*akicca-tthāna*, *paḍisevanā*) must be reported (*āloetṭae*; comp. *Viy.* 498a) to the teacher (*thera*, resp. *ṭhāvattinī*). This asks for self-victory as developed by breeding and instruction (*Thān.* 423b; 484a). In the motives inducing a monk not to confess we are shown the deficiencies of human nature (*Thān.* 137a, 417a), thus when saying to himself "it cannot be helped" or for fear of slander, or in the reasons for yet confessing his guilt for fear of the verdict of the teacher and of his fellow monks, of the Karman consequences and of his own conscience, and finally 10 *dosa* (*Thān.* 484a; *Viy.* 919a) in the way he makes his confession, i.e. with reservations within and tricks without. Insincerety, however, adds to the punishment (*Vav.* 1, 1-20 = *Nis.* 20, 1-20).

§159 The qualities of him who accepts the confession is demonstrated by *Thān.* 423b; 484a. He must be pious, attentive, experienced in practical affairs, gifted with the power of inspiring trust (*ovīlaga*), energetic (*ṭakuvvaga*), discreet (*aṭṭarissāi*), convincing (*niyyavaga*) and ready to allow extenuating circumstances (*avāya-daṃsī*). If by force majeure the monk was prevented from seeing the teacher—in which case he becomes an *amuha*—he is not liable to reproach (*Viy.* 375a). Hence, when the teacher is absent he is (acc. to *Vav.* 1, 34) represented by a number of substitutes i.e. by a member of the same *sambhoga* (§ 139), by one of another s., by a layman going through the (temporary) career of a monk (*sārūviya*, § 163) or by one of the common kind (*samman-bhāviya*). When even one of the latter is not at hand, the monk makes his confession under the open sky in the spiritual presence of the *Siddhas*. Performed in this way, however, the act has no further consequences, whereas in the normal case it entails the criminal procedure¹ The same applies to the confession made by a monk before his death (§165). It is equally requisite (*Vav.* 1, 25-32; 6, 10 f; 7, 1) when a monk enters into a new *gana* or when he returns to his former after having gone through an

¹ Yet this is also maintained in the *Sūtra* referred to

ascetic exercise. Self-accusation (*āloyanā*) is invariably bound up with one's confessing one's guilt (*padikkamana*), and only if both go together we come near to the western act of confession. The word applied for it signifies the return, and in the fivefold *padikkamana* relative to "influx" (§ 167 f), heresy, passion, etc. (Thān 349a) it has the meaning of "conversion." Its literal meaning is intermixed with the sixfold *p* (Thān 378b) as far as reference is being made to one's return from having relieved nature or either from sleep (*uccāra-p*, *pāsavana-p*, *somaṇ'antiya-p*). The confession which, now, concerns us here and which, like that formula, culminates in the words of *tassa micchā me dukkaḍaṃ* is made at certain appointed times in the early morning for offences committed during the night (*rāṇiya p*), in the evening for such committed during the day (*divasiya p*) and for the purpose of confirmation and also for making good in a more solemn way at the end of each half of a month (*paḷḷhiya p*.—hence the name of Pakkhiya Sutta (§ 55)—, after a lapse of 4 months (*cāummāsiya p*) and after 1 year (*saṃvacchariya p*). So then also in this respect the *p*. is fivefold. The proceeding is demonstrated in the comm by Yaśodeva (p 82) in the words of the Pakkhiyacunni and the Āvassayac important mainly for the lecture delivered by the Padikkamana-Sutta¹ (§ 55) and the prayer for remission (*khāmei, khamāveti*) directed not only by a younger monk to an older according to seniority but also by the teacher (*guru*) to his group and, what is more, to the youngest first

§160 What lies between the confession of guilt and the acceptance of the penalty inflicted upon the confessor (*ahā' rīhaṃ pāyacchittaṃ padivaṃṇittae*) is rendered by the texts (c.g. Vīy 375a, Thān 56b, K. 4, 25) in the words of *nindittae garaḥittae vuuttettae viṣohettae akaran(ay)āe abbhutthittae*. The first two say that the delinquent reproves himself in front of himself and his teacher,² the second pair expresses the process of the

¹ Literally printed from a ms by WEBER: Verz II, 739-741. All sentences throughout start with *icchāmi padikkamiumi* to end with *tassa micchā mi dukkaḍaṃ* (a Śloka-pāda)

² In verses Caus 50-54 *gараhaṃ* between *udirai* and *saṃvarai*, see Vīy 57b, theorizing Thān 43b, 112b, 213b

inner purge from ill-doing, and the last two the will to amendment. The further proceeding (*vavahāra*) is theoretically, as the case may be, determined by superior cognition (*āgama*), traditional prescriptions (*suya*), a commission sent over a long distance (*ānā*), a regulation (*dhāraṇā*) or by a habit legitimated by the qualified (*jīya*) (Vav. 10, 2) in that always the following comes in with the absence of the preceding (Thān. 317b; Viy. 383a; comp. LEUMANN, Jīt p. 1196). In praxi we have but the *suya* (K. 5, 25) as a necessary evidence for the execution (*paṭṭhavanā*, *paṭṭhavei*), while the *vavahāra* is merely mentioned as a "lightest possible procedure" (*ahā-lakṣae nāmaṃ vavahare*, K. 5, 53; Vav. 2, 6-17).¹

§161. The frequently quoted² stanza Āv. 19, contains 10 different forms of atonement, an enumeration probably going back to Uvav. § 30 I (also Thān. 484a; incomplete 355b; 423b; 453a), where atonement (*pāyacchitta*,³ frequently also *pacchitta*) is coordinated with inward asceticism. The first two forms are report (*āloyanā*) and confession (*paḍikkamaṇa*). Now, certainly, there are offences which by merely reporting them are atoned for, whereas there is no confession possible without *āloyanā* or else both must go together (*tadubhaya* or *mīsa*, the third form). Hence to count *paḍikkamaṇa* individually comes up to mere schematism. The sequence continues by giving (4.) *vivega*, the renunciation of the corpus delicti, and (5.) *viussagga*, standing motionless with one's arms hanging down. Under the name of *kāussagga* this is (so also Thān. 212b) part of the ceremonial observed in the act of confession etc. and may be called "low devotions", particularly as its duration is determined by the time it takes to say one or several *namaskāra* formulae.⁴ In the Jīy. the time is a measured

1. The classification into 3 times 3 *vav* communicated by the AUTHOR, Kalpasūtra op 14 footnote is obviously a mere construction

2. LEUMANN, Jīt p 2 For a Dig analogy see Chp 174 (§ 136)

3. This in the case of an offence and of a combination of such, and it is decreed as an additional punishment (§ 162) as well as for insincerety in confessing (Thān 199a).

4. *namo arihantānaṃ, n saddhānaṃ, n āyariyānaṃ, n uvajjhāyānaṃ n loe savva-sāhūṇaṃ* Then there follows the presentation of this formula in the famous Śloka. *eso ṭanca-namokkāro savva-pāva-paṇāsaṇo, mangalānaṃ ca sa-*

by breaths, and we there read of *viussagga* which have to last for 8, 25, 100, 108, etc. up to as many as 1008 *ūsāsa*. If in *Ṭhān.* 64b both *vivega* and *viussagga* are called *padīmā*, it may be assumed that the former word stands for the spiritual and the latter for the physical "position" (6) *tava* is the food either reduced, dropped or changed. The forms previously mentioned as well as those ranging from 7 to 10 (*cheya*, *mūla*, *anavaṭṭhaya* and *pāranciya*) are dealt with by the *Jīyakappa* (§ 52), while in the older disciplinary collections we meet but with concrete cases of the last four. In *K.* and *Vav.* the *cheya* mostly appears in connexion with the *parihāra*. In this book we must, however, deny ourselves the discussion as to what offences ask for what atonements, but it deserves mentioning that in the non-disciplinary parts of the Canon there is no reference whatever being made to punishments of this kind.

§162 (7) *cheya* means the reduction of the monk's age (§ 138). Among the *Śvetāmbaras* as well as among the *Dīgambaras* this punishment gave the name to one group of disciplinary texts each, comp. the *Cheyasutta*, *Indranandin's* *Chedapinda* and the *Chedānaudī* (§ 136). Where we are able to make out the duration of an offence we find that with a common monk the *cheya* amounts to the fivefold, with the *uvajjhāya* to the tenfold, and with the *āyariya* to the fifteenfold of it (*Cunnī* on *K.* 5, 5), and it may well be that this is what in the *Sūtra* is expressed by the word *s'antarā* (= *sva-krtād anta-rāt*). The *parihāra* means a "special position" mainly with regard to diet. *Sthān.* 168b gives the differences in diet fasting according to the different seasons. Acc. to *Jīy.* the restrictions concern the constituents mentioned § 156, they merely allow of *nuvīya*, *āyambila*, *egāsana* or *purim'addha*.¹ For other regulations regarding alms see *K.* 4, 26, *Vav.* 2, 28-30. They rest on the

vesiṃ padhamam havai mangalam (printed along with other formulae in the ritual books). Canonical only *Mahānis* 3 II (the *AUTHOR* p. 14). For a dispute concerning the wording (*havai* or *hoi*) see *WEBER*, *Kup.* p. 811.

¹ For the 3rd and 4th word *Chp.* and *Chn.* have *ega-ṣhāṇa* and *purimandala*. There all four words and, additionally, *khamana* (= *upavāsa*) are called the 5 *kallāna*.

fact that the *parihāra-kappa-tthiya* is obliged to render service to the *thera* from which he is released only temporarily (K 5, 53; Vav. 1, 22-24). Strictly speaking he stands outside the *gana* (comp. Vav. 2, 6), and he joins the others neither in their obligatory rounds nor in their travelling (Āyāi. II 50, 7=Nis. 2, 40—42; Nis 4, 112). If several monks of a closer companionship have committed an offence and, hence, are under *p*, always one of them is except from it and considered *kappāga* (= *kappa-tthiya*, § 136), to be served by the others. He will atone for his guilt (*niṃvīsaī*)¹ after them (Vav. 2, 1-4). By the same word the *niṃvīsamāna* is distinguished from the *niṃvīttakāya* (K. 6, 14=Thān. 167b; 371a). The principle of inequality which governs the life within the Order is complied with by alternately dividing such a group into *parihāriya* (also *pāri-*) and *anuparihāriya* (for which see Vav 2, 5) with the latter serving the former (Dīp. on Utt. 28, 32).

The *parihāra* is pronounced in two ways according as a reduction is admissible or not (*ugghāya* or *-īma* or *anuggh.* K 4, 1=Thān. 162b; 311a)². In K. and Nis. (comp. Nis 1 end etc.) the duration is either one or four months, Vav 1-20 has all numbers upto six. For the distribution of the restrictions on one, four or six months and their calling them *lahu* and *guru* comp. the Cunni on Jīy 61 and Kalpasūtra p 14 footnote. Though for an individual offence the *p*. does not extend over a period longer than six months, yet its duration will be extended if within this period a new offence is being committed (Nis. 20, 21-53). Then an additional *p*. (*ārovanā*) is due amounting to 20 or, resp. 15 days if the new offence is subject to a *p* of two or, resp. one month. As to additional *p* charged for new offences of three to six months the Nis. cunni (fol 650ff) gives the following extra charges with 3 months 25 days, with 4 30, with 5 35, and with 6 40.

As we have seen the *cheya* reduces the spiritual age of a

1. In his translation of K. 3, 13 this word was misunderstood by the AUTHOR.—Comp also Vav 1, 17.

2. Chp 204 (*aṇ*)*ugghāḍa*

monk If reduced without a remainder the monk is punished with the (8.) *mūla*, i.e. by repeating the act of consecration he starts right "from the bottom." The comm. attach some importance to the *mūla* (Chp. *mūla-khūḍi*, *m.-bhūmi*), whereas the Canon neglects it altogether From this "new start" the (9) *anavatthappa* (K 4, 3=Thān 162b)—adj. to *anavatthayā*—distinguishes itself in that the offender has to temporize for an interim till the act of consecration can be once more performed on him Since during this interim, acc. to the comm., fastings have to be exercised, it may be assumed that it is limited according to the case However, the offender can be re-consecrated only when, in the meantime, he has conducted himself like a layman (as opposed to a profane person), provided that the *gana* he is to belong to categorically asks for it (Vav 2, 18f, 22) The same applies (Vav 2, 20f 23) to the (10) *pāranciya* (K 4, 2=Thān 162b, an abstract subst. is missing)¹ He is excluded from the community of the monks, and no reference is made as to his being re-admitted Yet his readmittance is possible, as we learn from those Sūtras. But we have to consider that it is not offences but qualities of character that make a *pāranciya* he is bad, frivolous or of a homosexual disposition (*anna-m-annaṃ kare māne*) That is why in praxi his classification as a *par* comes up to his permanent exclusion, all the more since his subsequent conduct as a layman does not necessarily imply his re-consecration.

§163 The *saṃgha* is constituted not only by monks and nuns but by laymen and lay women as well (§ 137). The latter two are called *samanovāsaga* and *-siyā*, abbreviated *uvāsaga* and *-siyā* Other names are *sāvaga* and *sāvīyā* (along with the preceding pair Āyār II 92, Vīy 221b), *saddha* (e.g. Āyār. II 69, 15; 75, 22) and *gihī* (e.g. Vav 2, 18-23). The *sāgāriya* which in itself means the same (Vav. 4, 18f; 9, 1-30 *sāriya*) is the host (§ 147), the *gāratthiya* and the *gāratthinī* are complete strangers to the community of true believers by whom

¹ In Chp 174 262 ff the 9th and 10th form are comprised as *anupatthavaga* and *pāranciya* under (9) *parihāra* (comp also Mūlāc. 5, 165) Here the *saddahanā* leading through *nandana* and *garahana* (comp § 160) to the *sammatta*, i.e. to righteousness, is considered as the 10th form of the *pāyacchitta*.

they are even avoided (§ 148). An expression for the layman taken from the ethics (§ 168) is *desa-viraya*, i.e. "he who observes but part of the main regulations" (Bhattap. 29, 34; Āurap. 7; Caus. 57) as opposed to the *savva-v.*, the monk.

Thān. 242b says that a layman may wave to and fro like a flag, that he may either offer resistance like a picket or else be provocative like a thorn-bush (*khara-kantaya*), while on the other hand he may reflect the picture like a mirror. All this certainly goes back to his attitudes taken towards the wishes or the instructions on the part of either the monk or the nun. He is bound to grant them shelter, food, equipment and, in certain cases, to nurse them (comp. Uvās. 58 where, at the same time, it is emphasized that monks and nuns should observe a reserved attitude towards heretics and profane persons), and this certainly explains why, in the passage quoted, he is compared with father and mother, brother, friend or wife (*savattī*). For the hospitable welcome of a monk comp. Vivāgas. 2, 1. The moral value of giving alms is demonstrated by Vīy. 289a, 373a. Nothing, however, is said in the Canon regarding the services rendered by a layman for the general welfare, i.e. nothing regarding the foundation of local meeting- and rest-houses resembling the *dharma-śālā* and *upāsraya* of our days,¹ let alone temples or Jina statues (§ 25). The scene of instruction—as a return made by the monks (Vīy 141a), though also laymen among themselves ask for it (Vīy 550a)—is represented by the *ceyya*. The layman approaches the teacher in simple clothing without having anything on him containing life, and he does so with concentration and with his hands uplifted for the *añjali* from the moment he comes in sight of the teacher (Vīy 137a, Uvav. 54).

The morality of the layman is involved in his vows to be treated in § 170. Horizontally expanded as it were, these obligations are projected into the vertical by the ladder of the the 11 *uvāsaga-paḍimā* (Dasā 6, Samav 19a)² 1. *damsana-*

1. The words *samanovāsagassa samanovāsae (-ovassae) acchamāpassa* Vīy. 288b 367a seem to speak of a layman who is staying at his own house.

2. See also HOERNLE Uvās footnote 127, for which comp the comm. vol I, p. 27ff.

sāvaga is one who approves of the regulations for laymen in theory without having realized them in praxis yet.¹ This having been done on the 2nd step, the layman is a *kaya-vvaya-kamma*,² though he does not yet practise the *sāmāyia* (acc. to Dasā 6 II also the *desavagāsiya*) to its full extent. On the 3rd step he is *sāmāyia-kada*, but he still lacks the *posahōvavāsa*. The (4th) *pos-niraya*, on the other hand, neglects the *ega-rāiyā uvāsaga-paḍimā*. Apart from various externals the latter is chiefly characterized by the observance of sexual moderation according to which the layman is called (5th) *dyā bambhāyārī rattim parimānakada*. In this state of life he remains from 1-3 days upto 5 months³. On the 6th step he is continent even at night up to 6 months. Also with the further *paḍimā* their longest duration in months corresponds with their numbering. On the 7th step he starts with renouncing any food containing life (*sacitt'āhāra*), on the 8th and 9th he altogether ceases doing harm to living beings by either his own or foreign actions (*ārambha* and *pass'ārambha*), and on the 10th he gives up any diet ready for him (*udditttha-bhatta*, § 154). Here, moreover, the layman's head is clean-shaven except for a lock of hair (*khura-mundaga chihālī-dhāraga*). When being asked questions⁴ he must speak the truth by saying frankly whether he is able to answer or not (*kappanti duve bhāsāo bhāsittae, jahā jānaṃ "jānaṃ"*⁵ *ajānaṃ vā "no jānaṃ"*⁶). By this we find ourselves in the very centre of the monastic ethics to which the preceding *paḍimā* came conspicuously close already, and it is small wonder that on the 11th step equals the monk for as many months (*samaṇa-bhūya*). The only

1 In the description Dasā 1 (*tassa naṃ bahūṃ silavvaya-guna-veramaṇa-paccakkhāna-posahovavāsāṃ no sammam patihaviya-puvvāṃ bhavanti*) the *apuvvaya* are missing, but comp Abhay Samav 19b

2 These and the following word only Samv

3. Abhayadeva lists (Samav 20b) a o a sequence wherein the 5th *paḍimā* renounces eating in the dark and the following range in the order of 7, 5, 6, while 8 und 9 go together as one p.

4 Acc to the Tikā *ābhatṭha* and *samābh* = (*sam*)*ābhāṣita*. They accordingly belong to PISCHEL § 564

5 = *jānāmi*, This and more such forms were registered from archaic Ms (the Vasudeva-hindī) by ALSDORF BSOS 8 (1936), p. 321.

6. Comp also HOERNLE loc. cit

difference is that he still acknowledges relatives and close relations, and that on his round for alms he is allowed to call on them (*nāya-vihim ei*) though he has to observe the regulation forbidding him to accept food prepared in advance—we hear of *cāulôdaṇa* and *bhūlanga-sūva*. In any case, however, when asking for something he is bound to introduce himself as a layman.

The texts (comp. Uvās. 71 and others) are anxious to make it appear credible that a layman performs the 11 *paḍimā* one after the other.¹ But this, certainly, is not meant, whereas the idea rather implies partly a gradation of a more theoretical kind and partly the opportunity of making a selection. On step 1-4, as we have seen, the layman does not yet fully comply with the demands, and if Ānanda (loc. cit.) after 14½ years of laymanship would charge himself with all *p.* he would have to re-descend to their lower grades.

§164. The ancient sources fail to provide us with details concerning this temporary monastic life, and only K. 2, 13 in speaking of *pārīhāriya sāgāriya* can be taken as doing so.² In case this does not hit the point, i.e. if the word *sāgāriya* rather refers to the layman leading a normal life, then even such a one would be subject to disciplinary measures. This would correspond with the statements made in the *Saddhajīyakappa* (141 G) of Dharmaghosa (13th century), a later counterpart³ to the above mentioned *Jīyakappa*. Since (in spite of *Ṭhān.* 240a) there is, at least in the strict acceptation of the word, no “seniority” for a layman he can be punished only by restrictions imposed upon his food. These punishments extend from the *nivviga* up to the *atthama bhatta*. A layman can make himself guilty either by acting contrary to his vows or by not observing the regulations concerning the condition and the acceptance of the alms. Confession (*āloyaṇā*) takes place in the middle of every month, but we also know of corresponding

2. The German and English translations rendered by the AUTHOR are in any case wrong

3 WEBER, Verz. II, 881f

ceremonies taking place every four months and every year (Saddhaj. 10), whereas acc. to the older Saddhadinakicca of Devendra¹ confession is made every evening (stanza 233). Acc. to Saddhaj 12 the layman chooses a confessor from among the *āyariya*, *uvajjhāya* or *pavattī*, and they are replaced by others in a way similar to that set down by Vav 1, 34 for the monk, though here the *samman-bhāviya* is called *pacchā-kada*, and corresponding to the changed times the last instances next to the Siddhas are the figures of the Tīthagaras (*devayā-padīmā*). A Saddhapadikkamana-Sutta of 50 G² reflects the act of confession of a layman. Among the *āvassaya* this act is referred to by Sāmāiya and Padikkamana rendering it in a separate version. As long as the layman practices the *sāmāiya* Saddhad. 231 expects him to be respected equal to the monk.

§165. As indicated by the Uvās reporting on Ānanda it certainly happened more often than not that by practising the eleventh monastic mode of life the layman also came to practise the monastic mode of death, since the monk no less than the layman can form and carry out the resolution of ending their lives by fasting themselves to death. For the true believer this is the only possible kind of suicide³ unreservedly acknowledged and even recommended, and that is why in the way of a feeling of sympathy (*ārāhanā*, commonly "loyalty") it is added (as *samlehanā*, *sallehanā*) to the solemn act of a layman taking the oath of allegiance (§ 170). This subject is treated in a study delivered by K. v. KAMPTZ⁴ on which in the main the following is based Theory (Viy. 118a; 624a, Ṭhān. 93b; 175a, Āurap) distinguishes between a fool's (*bāla*) way of dying and a wise man's (*pañḍiya*) manner of death⁵ by adding a third category in between. All those untouched by Mahāvīra's teaching or disregarding his postulations die the fool's

¹ Śrāddhadmakṛtya aur Ātmanundā bhāvanā the latter (in Hindi). Benares 1876

² WEBER, Verz 883 ff

³ The natural manners of death (*visumbha*) are discussed in K. 4, 24, Vav 2, 26, 4, 11f, 5, 11f, 7, 17

⁴ Comp p 75

⁵ For the discrimination made also with the *īriya* see Viy 63b and for that made with the personality in general see Viy 90b, 102a

death, whereas the semi-wise death (*bāla-p.*) comes to the layman who is "befallen by him unexpectedly and suddenly, without any preceding fasting, but after having confessed and on a death-bed recognized as such."¹ In the description (Viy. 118a; Thāṇ. 93b; Nis. 11, 92) the execution mixes with the motives among which we find the desire for post-existence (with the *nyāna-* or *tabbhava-marana*) or, provided we do not misinterpret them, weariness and incapability (with the *vālaya-* and *vas'atṭa-m.*). In all cases we are, of course, concerned with voluntary dying. It is unconditionally disapproved of by Mahāvira when executed in the form of putting an end to one's life by drowning, burning, poisoning oneself, by using a weapon or by hurling oneself down a precipice, whereas in certain cases he is not blamed (*kāranena appaḍikuṭṭha*) who hangs himself or allows himself to be lacerated by vultures, i.e. who dies the *vehānasa-* or *giddha-pattha²-marana*. There is reason to assume that such a tolerant attitude is explicable only by the idea that the latter kind of suicide does not injure earth, water, and fire-beings by his fall. Over against this the suicide of the sage (*paṇḍiya-m.*) is the result of a fasting which as a lifelong fasting (*āvakaḥiya*) pertains to the system (§ 178). There are two different kinds *bhatta-paccakkhāna³* and *pāḍvagamana* with subdivisions for either kind. The renunciation of food expressed by the first word equally applies to the second, and the aim expressed by the second equally applies to the first. The difference consists in maintaining a posture without moving, and that is why, at least among the Śvetāmbaras, there has been since long the tendency of a wrong⁴ derivation from *pādapa*. This tendency may have been encouraged by the role which the tree is known to play in Indian religion in general and in both the Buddhist and Jain teaching (§ 18) in particular. Occasionally (Samav. 33a, Utt 5, 32, and others) a third category is placed between the two mentioned above, the *ingini-maraṇa*, which

1 v KAMPTZ, loc. cit p 15.

2 Preferably = *gḍhrā-sprṣṭa* in the sense of *g-bhukta* (loc cit p 16).

3 Viy 650 a appears to refer to a recidivous *bhatta-paccakkhāyaga*.
